10) Body-element, kaya-dhatu.

13 depend on a physical base
30 depend on a heart/mind base
42 can either depend on a base or not

4 do not depend on a base
89 consciousness

Summary of Bases

In the summary of bases, there are six kinds, namely, eye, ear nose, tongue, body and hear

All these, too, are found in the Sense-sphere. But in the Form-sphere three bases - nose, are not found. In the Formless-sphere no base exists.

Therein the five elements of sense-impressions lie entirely dependent on the five sensory organs as their respective bases. But the mind-element, namely, the five-door averting cons (two types of) receiving consciousness - rest in dependence on the heart. Likewise the rem mind-conscious-element comprising the investigating consciousness, the great Resultants, t by aversion, the first Path consciousness, smiling consciousness, and Form-sphere conscio dependence on the heart.

The remaining classes of consciousness whether Moral, Immoral, Functional, or Supramu dependent on, or independent of, the heart-base. The Formless-sphere Resultants are inde heart-bases.

It should be known that in the Sense-sphere seven elements are dependent on the six bas Form-sphere four are dependent on three bases, in the Formless-sphere the one single min dependent on any.

Forty-three arise dependent on a base. Forty-two arise with or without a base. The Forml arise without any base.

THE ABHIDHAMMA PHILOSOPHY

Its Estimation in the Past and its Value for the Present

THE HIGH ESTEEM OF ABHIDHAMMA IN BUDDHIST TRADITION

The Abhidhamma Pitaka, or the Philosophical Collection, forms the third great section of the Buddhist Pali Canon (Tipitaka). In its most characteristic parts it is a system of classifications, analytical enumerations and definitions, with no discursive treatment of the subject matter. In particular its two important books, the Dhammasangani and the Patthana, have the appearance of huge collections of systematically arranged tabulations, accompanied by definitions of the terms used in the tables. This, one would expect, is a type of literature scarcely likely to gain much popular appreciation, yet there is the fact that the Abhidhamma was, and is, highly esteemed and even venerated in the countries of Theravada Buddhism.

Two examples taken from the chronicles of Ceylon illustrate that high regard for the Abhidhamma. In the 10th century A.C. on the order of king Kassapa V of Ceylon, the whole Abhidhamma Pitaka was inscribed on gold plates, and the first of these books, the Dhammasangani, was set with jewels. When the work was completed, the precious manuscripts were taken in a huge procession to a beautiful monastery and deposited there. Another king of Ceylon, Vijaya Bahu (11th century), used to study the Dhammasangani in the early morning before he took up his royal duties, and he prepared a translation of it into Sinhalese, which however has not been preserved.

What were the reasons for such an extraordinary esteem for material that appears at first glance to consist of no more than dry and unattractive text books? And what actual importance do the two basic works of the Abhidhamma in particular, the Dhammasangani and the Patthana, still have today? These are the questions that we shall attempt to answer here.

In considering the reasons for this high esteem and regard for the Abhidhamma, we may leave aside any manifestation of faith, more or less unquestioning, that evokes in the devotee a certain awe owing to the very abstruseness and bulk of these books. That apart, we may find a first explanation in the immediate impression on susceptible minds that they are faced here by a gigantic edifice of penetrative insight, which in its foundations and its lay-out cannot well be ascribed to a lesser mind than that of a Buddha; and this first impression will find growing confirmation in the gradual process of comprehending these teachings.

According to the Theravada tradition the Abhidhamma is the domain proper of the Buddhas (//Buddha-visaya//), and its initial conception in the Master's mind (//manasa desana//), according to the //Atthasalini//, is traced to the time immediately after the Great Enlightenment. It was in the fourth of the seven weeks spent by the Master in the environ of the Bodhi tree that the Abhidhamma was conceived. These seven days were called by the teachers of old 'The Week of the House of Gems (//ratana-ghara-sattaha//)'. 'The House of Gems' is indeed a very befitting expression for the crystal-clear edifice of Abhidhamma-thought in which the Buddha dwelt during that period.

THE ABHIDHAMMA AS SYSTEM AND METHOD

Those who have an eye for the ingenious and the significant in the architecture of great edifices of thought will probably be impressed first by the Abhidhamma's structural qualities, its wide compass, its inner consistency, and its far-reaching implications. The Abhidhamma offers an impressive systematisation of the whole of reality as far as it is of concern to man's

liberation from passion and suffering, and the way thereto; for it deals with actuality from an exclusively ethical and psychological view-point, and with a definite practical purpose.

A very striking and deeply impressive feature of the Abhidhamma is the analysis of the entire realm of consciousness. It is the first time in the history of human thought that this was undertaken so thoroughly and realistically, without admixture of any metaphysics and mythology. This system provides a method by which the enormous welter of facts included or implied in it, can be subordinated to, and be utilized by, the //liberating// function of knowledge, which in the Buddha's teaching is the essential task and the greatest value of true understanding. This organizing and mustering of knowledge for such a purpose cannot fail to appeal to the practical thinker.

The Abhidhamma may also be regarded as a systematisation of the doctrines contained, or implied, in the Sutta-Pitaka, the Collection of Discourses. It formulates these Sutta-doctrines in strictly philosophical (//paramattha//) or truly realistic (//yatha-bhuta//) language that as far as possible employs terms of a function or process without any of the conventional (//vohara//) and unrealistic concepts assuming a personality, an agent (as different from the act), a soul or a substance.

These remarks about the systematising import of the Abhidhamma may perhaps create the impression in the reader that the Abhidhamma is no more than 'a mere method with only a formalistic function'. Leaving aside the fact that this is not so, as we shall see later, let us first quote, against this somewhat belittling attitude, a word of Nietzsche, himself certainly no friend of rigid systematisation: 'Scientific spirit

rests upon insight into the method'.

For the preeminently practical needs of the Buddhist the Abhidhamma fulfils the requirements stated by Bertrand Russell 'A complete description of the existing world would require not only a catalogue of things, but also a mention of all their qualities and relations' ('//Our Knowledge of the External World//'). A systematical 'catalogue of things' together with their qualities, or better 'functions', is given in the first book of the Abhidhamma, the Dhammasangani, a title that could well be rendered by 'A Catalogue (or Compendium) of Things'; and the relations, or the conditionality, of these things are treated in the Patthana.

Some who deem themselves 'strong-minded' have called systems 'a refuge of feeble minds'. It is to be admitted that the conceptual labels supplied by systems (and also in Abhidhamma) have often been misused as a surrogate for the true comprehension of a changing, and not at all rigid, world. But if cautiously and critically used, it is precisely one of the advantages of systematic thought that it provides, as it were, 'weapons of defence', means of protection , against the overwhelming assault of innumerable internal and external impressions on the human mind. This unceasing influx of impressions, by sheer weight of number and diversity alone, has an influence, even on 'strong minds', that tends to be either overpowering and fascinating, or confusing, intimidating, distracting, even dissolving, unless this vast world of plurality (//papanca//) is at least partly assimilated by the human mind with the help of systematic and methodical thought. But systems may also be 'aggressive weapons' when wielded by a mind that through its power of understanding tries to control and master the numerous experiences, actions and reactions occurring in man's inner and outer world, subordinating them to his own purpose.

The Abhidhamma system, however, is not concerned with an artificial abstract world of 'objects in themselves'. In so far as it deals with external facts at all, the respective concepts refer to the relation of those 'external facts' to the bondage or liberation of the human mind; or they are terms auxiliary to the tasks of the understanding and mental training connected with the work of liberation.

The basically dynamic character of the Abhidhamma system, and of the concepts it employs, goes far in preventing both rigidity and any artificial simplification of a complex and ever-changing world - the faults that those inimical to them find in all 'systems'.

System and method bring order, coherence and meaning into what often appears to be a world of isolated facts which only becomes amenable to the purposes of man by a methodical approach. This holds true for the system of the Abhidhamma too, in regard to the highest purpose; man's liberation from ignorance and suffering.

CLARIFICATION OF TERMS

Many thinkers of all times and climes have insisted that a clarification of concepts and terms must be the basis of all realistic and successful thought, action, and, as Kungfutse says, even of government. But as shown by the widespread confusion of ideas throughout the centuries, this has been neglected in nearly all branches of life and thought - a fact responsible for much of man's unhappiness.

It is another evidence of the scientific spirit of the Abhidhamma that the definition of its terms and of their

range of application occupies a very prominent place. In particular, the Dhammasangani is essentially a book of classifications and definitions. In addition, a very elaborate and cautious delimitation of terms is given in the sixth book of Abhidhamma the 'Yamaka', which to our modern taste appears even over-elaborate and over-cautious in that respect.

The Suttas, serving mainly the purpose of offering guidance for the actual daily life of the disciple, are mostly (though not entirely) couched in terms of conventional language (//vohara-vacana//), making reference to persons, their qualities, possessions, etc. In the Abhidhamma, this Sutta terminology is turned into correct functional forms of thought, which accord with the true 'impersonal' and everchanging nature of actuality; and in that strict, or highest, sense (//paramattha//) the main tenets of the Dhamma are explained.

While vague definitions and loosely used terms are like blunt tools unfit to do the work they are meant for, while concepts based on wrong notions will necessarily beg the question to be scrutinized and will thus prejudice the issue, the use of appropriate and carefully tempered conceptual tools will greatly facilitate the quest for liberating knowledge, and is an indispensable condition of success in that quest.

Hence the fact that Abhidhamma literature is a rich source of exact terminology, is a feature not to be underestimated.

ANALYSIS OF CONSCIOUSNESS

One of the Abhidhamma's most important contributions to human thought, though still insufficiently known and

utilized, is the analysis and classification of consciousness undertaken in the first of the //Dhammasangani//. Here the human mind, so evanescent and elusive, has for the first time been subjected to a comprehensive, thorough and unprejudiced scrutiny, which definitely disposes of the notion that any kind of static unity or underlying substance can be traced in mind. However, the basic ethical lay-out and purpose of this psychology effectively prevents conclusions of ethical materialism or theoretical and practical amoralism being derived from its realistic and unmetaphysical analysis of mind.

The method of investigation applied in the Abhidhamma is //inductive//, being based exclusively on an unprejudiced and subtle introspective observation of mental processes. The procedure used in the //Dhammasangani// for the analysis of consciousness is precisely that postulated by the English philosopher and mathematician, A. N. Whitehead: 'It is impossible to over-emphasize the point that the key to the process of induction, as used either in science or in our ordinary life, is to be found in the right understanding of the immediate occasion of knowledge in its full concreteness...In any occasion of cognition, that which is known is an actual occasion of experience, as diversified by reference to a realm of entities which transcend that immediate occasion in that they have analogous or different connections with other occasions of experience' ('Science and the Modern World').

Whitehead's term 'occasion' corresponds to the Abhidhamma concept //samaya// (time, occasion, conjunction of circumstances), which occurs in all principal paragraphs of the //Dhammasangani//, and there denotes the starting point of the analysis. The term receives a detailed and very instructive treatment in the Atthasalini the commentary to the aforementioned

work.

The Buddha succeeded in reducing this 'immediate occasion' of an act of cognition to a single moment of consciousness, which, however, in its subtlety and evanescence, cannot be observed, directly and separately, by a mind untrained in introspective meditation. Just as the minute living beings in the microcosm of a drop of water become visible only through a microscope, so, too, the exceedingly short-lived processes in the world of mind become cognizable only with the help of a very subtle instrument of mental scrutiny, and that only obtains as a result of meditative training. None but the kind of introspective mindfulness or attention (//sati//) that has acquired, in meditative absorption, a high degree of inner equipoise, purity and firmness (//upekkha-sati-parisuddhi//), will possess the keenness, subtlety and quickness of cognitive response required for such delicate mental microscopy. Without that meditative preparation only the way of inference from comparisons between various complete or fragmentary series of thought moments will be open as a means of research. But this approach too may yield important and reliable results, if cautious and intelligent use is made of one's own introspective results and of the psychological data of meditative experience found in Sutta and Abhidhamma.

In the //Anupada Sutta// (Majjhima Nikaya 111) it is reported that the Venerable Sariputta Thera, after rising from meditative absorption (jhana) was able to analyse the respective jhanic consciousness into its constituent mental factors. This may be regarded as a precursor of the more detailed analysis given in the Dhammasangani.

Let us listen to a voice from Indian antiquity

appreciating the difficulty of that analytical work and the greatness of its achievement. We read in the 'Questions of King Milinda'; "A difficult feat indeed was accomplished, O great King, by the Exalted One" -- "Which was that difficult feat, O venerable Nagasena?" - "The Exalted One, O king, has accomplished a difficult task when he analysed a mental process having a single object as consisting of consciousness with its concomitants, as follows: 'This is sense-impression, this is feeling, perception, volition, consciousness." - "Give an illustration of it, venerable sir" - "Suppose, O king, a man has gone to the sea by boat and takes with the hollow of his hand a little sea water and tastes it. Will this man know, 'This is water from the Ganges, this is water from such other rivers as Jamuna, Aciravati etc.?" - "He can hardly know that." - "But a still more difficult task, O king, was accomplished by the Exalted One when he analysed a mental process having a single object, as consisting of consciousness with its concomitants."

The rather terse and abstract form in which the //Dhammasangani// presents its subject matter, the analysis of mind, should not mislead the reader into making him believe that he is confronted with a typical product of late scholastic thought. When, in the course of closer study, he notices the admirable inner consistency of the system, and gradually becomes aware of many of its subtle points and far-reaching implications, he will become convinced that at least the fundamental outlines and the key notes of Abhidhamma psychology must be the result of a profound intuition gained through direct and penetrative introspection. It will appear to him increasingly improbable that the essence of the Abhidhamma should be the product of a cumbersome process of discursive thinking and artificial thought-constructions. This impression of the essentially intuitive origin of the Abhidhammic

mind-doctrine will also strengthen his conviction that the elements of the //Dhammasangani// and the //Patthana// must be ascribed to the Buddha himself and his early great and holy disciples. What is called 'scholastic thought', which has its merit in its own sphere and does not deserve wholesale condemnation, may have had its share later in formulating, elaborating and codifying the teachings concerned.

If we turn from the Abhidhamma to the highest contemporary achievements of non-Buddhist Indian thought in the field of mind and 'soul', i.e. the early Upanishads and the early Samkhya, we find that apart from single great intuitions, they teem with mythological ritualistic terms, and with abstract speculative concepts. Against that background the realistic sober and scientific spirit of Abhidhamma psychology (or its nucleus extant in the Sutta period) must have stood out very strongly. To those who could appreciate the import of that contrast, it will have sufficed to instil that high esteem and admiration for the Abhidhamma of which we have spoken.

But even if compared with most of the later psychological teachings of the East or the West, the distance from Abhidhamma psychology remains fundamentally the same, for only the Buddha's teaching on mind keeps entirely free from the notions of self, ego, soul, or any other permanent entity in, or behind, mind.

THE ANATTA-DOCTRINE

It is on this very doctrine of Non-self (//anatta//) that all Abhidhamma thought converges and this is where it culminates. The elaborate and thorough treatment of Anatta is also the most important //practical//

contribution of the Abhidhamma to the progress of the Buddha's disciple towards liberation. The Abhidhamma provides him with ample material for his meditations in the field of insight (//vipassana//), concerning Impermanence and Impersonality, and this material has been analysed down to the subtlest point and is couched in strictly philosophical language.

There will certainly be many to whom the degree of analytical details found in the Suttas will be quite enough for them to understand Anatta, and sufficient for their use in meditative practice. But there are also minds that require repeated and varied demonstration and illustration of a truth before they are entirely satisfied and convinced. There are also others who wish to push their analysis to the greatest detail possible and to extend it to the very smallest unit accessible; in order to make quite sure that even the realm of the infinitesimal, of the material and psychical 'atoms', does not hide any self or abiding substance. To such minds the Abhidhamma will be of great value. But also those who, in general, are satisfied with the expositions in the Suttas, may sometimes wish to investigate more closely a particular point that has roused their interest or presents difficulties. To them too the Abhidhamma will prove helpful.

Besides helping such individual cases, the Abhidhamma will in general render valuable aid in the slow and difficult change of thought and outlook from the view-point of 'self' to that of 'non-self'. Having once grasped intellectually the doctrine of non-self, one can certainly succeed in applying it to theoretical and practical issues if only one remembers it in time and deliberately directs one's thoughts and volitions accordingly. But except for such deliberate directing of thought, which in most cases will be relatively rare, the mind will continue to move in the old-accustomed

ruts of 'I' and 'mine', 'self' and 'substance', which are deeply ingrained in our daily language and our modes of thinking; and our actions too will still continue to be frequently governed by our ancient egocentric impulses. An occasional intellectual assent to the true outlook of Anatta will not effect great changes in that situation. The only remedy is for bad or wrong habits of action, speech and thinking to be gradually replaced by good and correct habits until the latter become as spontaneous as the former are now. It is therefore necessary that right thinking, that is, thinking in terms of Anatta, is made the subject of regular and systematic mental training until the power of wrong habits of thought is reduced and finally broken. The Abhidhamma in general, and in particular the various Triads and Dyads of terms as listed in the //Matika//, 'Schedule', of the Abhidhamma Pitaka, provide ample material for such 'fluency exercises' of right thinking. Familiarity with the application of the 'impersonal' view-point of the Abhidhamma and with the terminology by which it is expressed will exercise a considerable formative influence on the mind.

ABHIDHAMMA AND MEDITATION

A fertile soil for the origin and persistence of beliefs and ideas about a self, soul, god or any other form of an absolute entity, is //misinterpreted meditative experience// occurring in devotional rapture or mystical trance. Such experience is generally interpreted by the mystic or theologian as revelation of, or union with, a godhead; or it is taken for a manifestation of man's true and eternal Self. Such interpretations are conceived and accepted all the more readily since such meditative experience so greatly transcends the average level of consciousness that the temptation is very great, indeed, to connect it in some way or other with a

deity or some other eternal principle. The overwhelming impact of such meditative experience on the mind will produce a strong feeling of certainty of its reality and superiority; and this strong feeling of assurance will be extended to the theological or speculative interpretation, too. In that way these interpretations will obtain a strong hold on the mind, for they are imagined to correspond with actual, irrefutable experience, while, in fact, they are only superimposed on the latter.

The analytical method of the Abhidhamma gives immunity against such deceptive interpretations. In the //Dhammasangani// the consciousness of meditative absorption (//jhana//) is subjected to the same sober analysis as the ordinary states of mind. It is shown that meditative consciousness, too, is a transitory combination of impermanent, conditioned and impersonal mental factors, which differ from their counterparts accompanying ordinary consciousness, only in their greater intensity and purity. They do not, therefore, warrant at all any assumption of a divine manifestation or an eternal Self. It has already been mentioned how the Venerable Sariputta undertook such an analysis of his meditative experience.

It is characteristic of the spirit of the Buddha's teaching that the disciple is always advised to follow up his meditative absorption by an analytical retrospection (//paccavekkhana//) on the mental states just experienced, comprehending them by Insight (//vipassana//) as impersonal, evanescent, and therefore not to be adhered to.

By so doing, three main defilements of the mind (//kilesa//) are effectively warded off, which otherwise may easily arise along with the overwhelming impact of meditative experience on the mind:

1) Craving (//tanha//) for these experiences, clinging to them and longing for them for their own sake (//jhana-nikanti//, 'indulgence in Jhana');

2) the False View (//ditthi//) that these meditative experiences imply a self or a deity;

3) the Conceit (//mana//) that may arise through having attained these exalted states.

These remarks refer to the division of Buddhist meditation called Development of Tranquillity (//samatha-bhavana//), aiming at the attainment of Jhana.

Turning now to the Development of Insight (//vipassana-bhavana//), the classificatory terms of the Abhidhamma Schedule (//matika//), as explained in the //Dhammasangani//, etc., provide numerous possibilities for including in them the various particular subjects of Insight. By such reference to the triads or dyads of terms in the Schedule a limited subject of Insight can easily be connected with the entire world of actuality, and will thereby gain in significance. Such a particular subject of Insight may either be deliberately chosen from the traditional subjects of meditation (//kammatthana//) or may consist in some incidental occurrence in life. The latter again may be either some deeply stirring inner or outer experience or it may be quite an ordinary happening of every-day life taken as an object of Right Mindfulness and Clear Comprehension (//sati-sampajanna//), as is often reported of meditating monks of old. The impulse to deep religious commotion (//samvega//) or the stimulation for Insight derived from such incidental events may be easier retained, utilized and extended to general, universal significance, if that event can be referred at once to

one of the triads or dyads of Abhidhammic terms, which comprise the entire actuality. Thus a single act of penetrative understanding starting from a limited object may acquire such intensity, width and depth as to either lead to, or effectively prepare for, that liberating Insight of which a great Buddhist thinker has said:

'The understanding of one single thing means the understanding of all; the voidness of one single thing is the voidness of all.' - Aryadeva (Catuhsataka, v.191).

KNOWLEDGE OF ABHIDHAMMA, A REQUIREMENT FOR THE PREACHER AND TEACHER OF DHAMMA

The preceding pages will have shown the importance of the Abhidhamma for clarity of thought, for correct understanding of actuality, and for individual inner progress. Yet as far as those are concerned whose life is devoted exclusively to the realisation of Deliverance, a knowledge of the Abhidhamma, at least in the sense of the seven books so called, might well be regarded as optional. But it is different for those who wish to teach and explain the Dhamma to others. Here a familiarity with the Abhidhamma is deemed quite indispensable by the Theravada tradition. We read in the //Atthasalini//: 'Only monks who are proficient in Abhidhamma can be regarded as 'preachers of Dhamma (//dhammakathika//)'. Others, even if they actually engage in preaching, cannot truly be so called. When giving a doctrinal exposition, they may, for instance, mix up the various kinds of karma and karmic results or the various factors found when analysing body and mind. But those proficient in Abhidhamma do not make such mistakes.

Features that make the Abhidhamma so important for

teachers of the Dhamma are especially these: systematisation of the huge amount of doctrinal material contained in the Sutta Pitaka; education in orderly and methodical thinking; clarification of terms; proficiency in, and habituation to, the application of the view-point of ultimate truth (//paramattha//) to various subjects of thought and situations of life; mastery of doctrinal detail.

THE EVALUATION OF ABHIDHAMMA AND THE QUESTION OF ITS AUTHENTICITY

Even in olden days opinions about the Abhidhamma Pitaka moved between the extremes of unquestioning veneration and entire repudiation. Very early there were doubts about the authenticity of the Abhidhamma Pitaka as genuine Buddha word. The early sect of the Sautrantikas regarded, as their name indicates, only Sutta and Vinaya as canonical, but not the Abhidhamma.

It may have been a follower of that sect who is introduced in the //Atthasalini// as criticising the Abhidhamma lecture of a monk thus: 'You have quoted, O preacher, a long Sutta that seems to girdle Mount Meru. What is the name of it?' - 'It is an Abhidhamma Sutta.' - 'But why did you quote an Abhidhamma Sutta? Is it not befitting to cite a Sutta that has been proclaimed by the Buddha?' - 'And by whom do you think the Abhidhamma was proclaimed?' - 'It was not proclaimed by the Buddha.' Thereupon that monk is severely rebuked by the preacher, and after that the //Atthasalini// continues: 'He who excludes the Abhidhamma (from the Buddha-Word) damages the Conqueror's Wheel of Dhamma (//jina-cakkam paharam deti//). He excludes thereby the Omniscience of the Tathagata and impoverishes the grounds of the Master's Knowledge of Self-confidence' (//vesarajja-nana// to which Omniscience belongs); he

deceives an audience anxious to learn; he obstructs (progress to) the Noble Paths of Holiness; he makes all the eighteen causes of discord appear at once. By so doing he deserves the disciplinary punishment of temporary segregation, or the reproof of the assembly of monks.' This very severe attitude seems somewhat extreme, but it may be explained as a defensive reaction against sectarian tendencies at that period.

The main arguments of Theravada against those who deny the authenticity of the Abhidhamma, are as follows:

1) The Buddha has to be regarded as the first Abhidhammika, because, according to the //Atthasalini//, 'he had already penetrated the Abhidhamma when sitting under the tree of Enlightenment.'

2) 'The Abhidhamma, the ultimate doctrine, is the domain of the omniscient Buddhas only, not the domain of others' (Asl). These profound teachings are unmistakably the property of an enlightened being, a Buddha. To deny this is as senseless as stealing the horse of a World Ruler, unique in its excellency, or any other possession of his, and showing oneself in public with it. And why? Because they obviously belong to and are befitting for a king (Asl).

Even to non-Buddhists who do not regard the Buddha as an omniscient Enlightened One, but recognize him as a great and profound thinker it should appear improbable that the Buddha would have remained unaware of the philosophical and psychological implications of his teachings, even if he did not speak of them at the very start and to all his followers. Considering the undeniable profundity of the Abhidhamma, the world-wide horizons of that gigantic system, and the inexhaustible impulses to thought which it offers - in view of all this it seems much more probable that at least the basic

teachings of Abhidhamma derive from that highest intuition that the Buddha calls //Samma-sambodhi//, Perfect Enlightenment. It appears therefore a quite credible as well as a reasonable and cautious statement when the old Theravada tradition ascribes the fundamental intuitions and the framework of the Abhidhamma (not more than that) to the Buddha himself. A quite different question, of course, is the origin of the codified Abhidhamma literature as we have it at present. But this problem cannot be dealt with here, and in any case the sources and facts at our disposal do not allow very much to be said about it with any definiteness.

Theravada tradition holds that the Buddha preached the Abhidhamma first to the assembled gods of the Tavatimsa heaven, headed by his mother. After that, having returned to earth again, he conveyed the bare method to the Arahat Sariputta. Whatever one may think about this tradition, whether, as the devout Eastern Buddhist does, one regards it as a historical account, or whether one takes it as a significant legend, one fact emerges fairly clearly from it; the originators of this very early tradition did not assume the Abhidhamma texts to have been expounded by the Buddha to human beings in the same way and as literally as the Sutta texts. If one wishes to give a psychological interpretation to that traditional account, one might say that the sojourn in the world of gods may refer to periods of intense contemplation transcending the reaches of an earth-bound mentality; and that from the heights of that contemplation its fundamental teachings were brought back to the world of normal human consciousness and handed over to philosophically gifted disciples like the Venerable Sariputta.

In a comparative evaluation of Abhidhamma and Sutta texts, the fact is often overlooked - which, however,

has been repeatedly stressed by the Venerable Nyanatiloka-Mahathera - that the Sutta Pitaka too contains a considerable amount of pure Abhidhamma. This comprises all those numerous Suttas and passages where ultimate (//paramattha//) terms are used, expressing the impersonal (//anatta//) or functional way of thinking, for example, when dealing with the khandhas, dhatus, ayatanas, etc.

One also frequently hears the question asked whether the Abhidhamma is necessary for a full understanding of the Dhamma or for final liberation. In this general form, the question is not quite adequately put. Even in the Sutta Pitaka many different methods of practice, many 'gates' to the understanding of the same four Truths and to the final goal, Nibbana, are shown. Not all of them are 'necessary' or suitable in their entirety for all individual disciples, who will make their personal choice among these various methods of approach according to circumstances, inclination and growing maturity. The same holds true for the Abhidhamma both as a whole and in its single aspects and teachings.

CONCLUDING REMARKS AND A WARNING

Taking a middle path between overrating or underrating the Abhidhamma, we may say: The Abhidhammic parts of the Sutta, namely the teachings given there in ultimate (//paramattha//) terms, are certainly indispensable for the understanding and practice of the Dhamma; and the additional explanations of these teachings given in the Abhidhamma proper may prove very helpful, and in some cases even necessary, for both these purposes. As to the codified Abhidhamma Pitaka, familiarity with all its details is certainly not a general necessity; but if it is studied and knowledge of it is applied in the way briefly indicated in these pages, this will surely

richly enhance a true understanding of actuality and aid the work of liberation. Also, if suitably presented, the Abhidhamma can provide for philosophical minds a stimulating approach to the Dhamma that will prove helpful to them provided they take care to compensate it adequately with the practical aspects of the Dhamma. Such an approach to the Dhamma should certainly not be blocked by the wholesale disparagement of Abhidhamma study sometimes found nowadays among Buddhists of the West, and even of the East. Dangers of one-sided emphasis and development lurk not only in the Abhidhamma but also in other ways of approach to the Dhamma, and they cannot be entirely avoided until a very high level of harmonious integration of mental qualities has been attained (cf. the 'Balance of the Five Spiritual Faculties'; //indriya-samata//).

To be sure, without an earnest attempt to apply the Abhidhamma teachings in such ways as intimated above, they may easily become a rigid system of lifeless concepts. Like other philosophical systems, the Abhidhamma can very easily lead to dogmatic and superstitious belief in words, for example, to the opinion that one really knows something about an object of cognition if one tacks a conceptual label on to it. The study of the Abhidhamma should therefore not be allowed to degenerate to a mere collecting, counting and arranging of such conceptual labels. In that way, Abhidhamma study (but, of course, not the Abhidhamma itself) would become just one more among the many existing intellectual 'play-things' which serve as an escape from facing stark reality, or as a 'respectable excuse' with which to try and evade hard work for one's own inner progress towards liberation, for which purpose alone the Abhidhamma is meant. A merely abstract and conceptual approach to the Abhidhamma may also lead to that kind of intellectual pride which often goes together with specialised knowledge.

If these pitfalls are avoided, there is a good chance that the Abhidhamma may again become a living force which stimulates thought and aids the meditative endeavour for the mind's liberation. To achieve that, it is necessary, however, that the Abhidhamma teachings, which are extremely condensed in parts, are not merely accepted and transmitted verbally, but that they are carefully examined and contemplated in their philosophical and practical implications. This again requires the devotion of searching and imaginative minds; and as they will have to work on neglected and difficult ground, they should not lack the courage to make initial mistakes, which can be rectified by discussion and constant reference to the teachings of the Sutta Pitaka.

As to the relation of the teachings of the Abhidhamma to those of the Sutta Pitaka, two very apt comparisons given in a conversation by the late Venerable Pelene Vajiranana, Maha-Nayakathera of Vajirarama, Colombo, may be added, in conclusion:

The Abhidhamma is like a powerful magnifying-glass, but the understanding gained from the Suttas is the eye itself, which performs the act of seeing. Again, the Abhidhamma is like a medicine container with a label giving an exact analysis of the medicine; but the knowledge gained from the Suttas is the medicine itself which alone is able to cure the illness and its symptoms, namely craving rooted in ignorance, and the suffering caused by it.

THE BUDDHIST PUBLICATION SOCIETY

The BPS is an approved charity dedicated to making known the Teaching of the Buddha, which has a vital message for people of all creeds. Founded in 1958, the BPS has published a wide variety of books and booklets covering a great range of topics. Its publications include accurate annotated translations of the Buddha's discourses, standard reference works, as well as original contemporary expositions of Buddhist thought and practice. These works present Buddhism as it truly is -- a dynamic force which has influenced receptive minds for the past 2500 years and is still as relevant today as it was when it first arose. A full list of our publications will be sent upon request with an enclosure of U.S. $1.00 or its equivalent to cover air mail postage.

INTRODUCTION

by
U Rewata Dhamma
&
Bhikkhu Bodhi

The nucleus of the present book is a medieval compendium of Buddhist philosophy entitled the //Abhidhammattha Sangaha//. This work is ascribed to Acariya Anuruddha, a Buddhist savant about whom so little is known that even his country of origin and the exact century in which he lived remain in question. Nevertheless, despite the personal obscurity that surrounds the author, his little manual has become one of the most important and influential textbooks of Theravada Buddhism. In nine short chapters occupying about fifty pages in print, the author provides a masterly summary of that abstruse body of Buddhist doctrine called the Abhidhamma. Such is his skill in capturing the essentials of that system, and in arranging them in a format suitable for easy comprehension, that his work has become the standard primer for Abhidhamma studies throughout the Theravada Buddhist countries of South and Southeast Asia. In these countries, particularly in Burma where the study of Abhidhamma is pursued most assiduously, the //Abhidhammattha Sangaha// is regarded as the indispensable key to unlock this great treasure-store of Buddhist wisdom.

The Abhidhamma

~~~~~~~~~~~~~~~

At the heart of the Abhidhamma philosophy is the Abhidhamma Pitaka, one of the divisions of the Pali Canon recognized by Theravada Buddhism as the authoritative recension of the Buddha's teachings. This canon was compiled at the three great Buddhist councils held in India in the early centuries following the Buddha's demise: the first, at Rajagaha, convened three months after the Buddha's Parinibbana by five hundred senior monks under the leadership of the Elder Mahakassapa; the second, at Vesali, a hundred years later; and the third, at Pataliputta, two hundred years later. The canon that emerged from these councils, preserved in the Middle Indian language now called Pali, is known as the Tipitaka, the three "baskets" or collections of the teachings. The first collection, the Vinaya Pitaka, is the book of discipline, containing the rules of conduct for the bhikkhus and bhikkhunis -- the monks and nuns -- and the regulations governing the Sangha, the monastic order. The Sutta Pitaka, the second collection, brings together the Buddha's discourses spoken by him on various occasions during his active ministry of forty-five years. And the third collection is the Abhidhamma Pitaka, the "basket" of the Buddha's "higher" or "special" doctrine.

This third great division of the Pali Canon bears a distinctly different character from the other two divisions. Whereas the Suttas and Vinaya serve an obvious practical purpose, namely, to proclaim a clear-cut message of deliverance and to lay down a method of personal training, the Abhidhamma Pitaka presents the appearance of an abstract and highly technical systemization of the doctrine. The collection consists of seven books: the //Dhammasangani//, the //Vibhanga//, the //Dhatukatha//, the //Puggalapannatti//, the //Kathavatthu//, the //Yamaka//, and the //Patthana//. Unlike the Suttas, these are not records of discourses and discussions occurring in real-life settings; they are, rather, full-blown treatises in which the principles of the doctrine have been methodically organized, minutely defined, and meticulously tabulated and classified. Though they were no doubt originally composed and transmitted orally and only written down later, with the rest of the canon in the first century B.C., they exhibit the qualities of structured thought and rigorous consistency
~~~~~~~~~~~~~~~

more typical of written documents.

In the Theravada tradition the Abhidhamma Pitaka is held in the highest esteem, revered as the crown jewel of the Buddhist scriptures. As examples of this high regard, in Sri Lanka King Kassapa V (tenth century A.C.) had the whole Abhidhamma Pitaka inscribed on gold plates and the first book set in gems, while another king, Vijayabahu (eleventh century) used to study the //Dhammasangani// each morning before taking up his royal duties and composed a translation of it into Sinhala. On a cursory reading, however, this veneration given to the Abhidhamma seems difficult to understand. The texts appear to be merely a scholastic exercise in manipulating sets of doctrinal terms, ponderous and tediously repetitive.

The reason the Abhidhamma Pitaka is so deeply revered only becomes clear as a result of thorough study and profound reflection, undertaken in the conviction that these ancient books have something significant to communicate. When one approaches the Abhidhamma treatises in such a spirit and gains some insight into their wide implications and organic unity, one will find that they are attempting nothing less than to articulate a comprehensive vision of the totality of experienced reality, a vision marked by extensiveness of range, systematic completeness, and analytical precision. From the standpoint of Theravada orthodoxy the system that they expound is not a figment of speculative thought, not a mosaic put together out of metaphysical hypotheses, but a disclosure of the true nature of existence as apprehended by a mind that has penetrated the totality of things both in depth and in the finest detail. Because it bears this character, the Theravada tradition regards the Abhidhamma as the most perfect expression possible of the Buddha's unimpeded omniscient knowledge (//sabbannuta-nana//). It is his statement of the way things appear to the mind of a Fully Enlightened One, ordered in accordance with the two poles of his teaching: suffering and the cessation of suffering.

The system that the Abhidhamma Pitaka articulates is simultaneously a philosophy, a psychology, and an ethics, all integrated into the framework of a program for liberation. The Abhidhamma may be described as a philosophy because it proposes an ontology, a perspective on the

nature of the real. This perspective has been designated the "dhamma theory" (//dhammavada//). Briefly, the dhamma theory maintains that ultimate reality consists of a multiplicity of elementary constituents called //dhammas//. The dhammas are not noumena hidden behind phenomena, not "things in themselves" as opposed to "mere appearances," but the fundamental components of actuality. The dhammas fall into two broad classes: the unconditioned dhamma, which is solely Nibbana, and the conditioned dhammas, which are the momentary mental and material phenomena that constitute the process of experience. The familiar world of substantial objects and enduring persons is, according to the dhamma theory, a conceptual construct fashioned by the mind out of the raw data provided by the dhammas. The entities of our everyday frame of reference possess merely a consensual reality derivative upon the foundational stratum of the dhammas. It is the dhammas alone that possess ultimate reality: determinate existence "from their own side" (//sarupato//) independent of the mind's conceptual processing of the data.

Such a conception of the nature of the real seems to be already implicit in the Sutta Pitaka, particularly in the Buddha's disquisitions on the aggregates, sense bases, elements, dependent arising, etc., but it remains there tacitly in the background as the underpinning to the more pragmatically formulated teachings of the Suttas. Even in the Abhidhamma Pitaka itself the dhamma theory is not yet expressed as an explicit philosophical tenet; this comes only later, in the Commentaries. Nevertheless, though as yet implicit, the theory still comes into focus in its role as the regulating principle behind the Abhidhamma's more evident task, the project of systemization.

This project starts from the premise that to attain the wisdom that knows things "as they really are," a sharp wedge must be driven between those types of entities that possess ontological ultimacy, that is, the dhammas, and those types of entities that exist only as conceptual constructs but are mistakenly grasped as ultimately real. Proceeding from this distinction, the Abhidhamma posits a fixed number of dhammas as the building blocks of actuality, most of which are drawn from the Suttas. It then sets out to define all the doctrinal

terms used in the Suttas in ways that reveal their identity with the ontological ultimates recognized by the system. On the basis of these definitions, it exhaustively classifies the dhammas into a net of pre-determined categories and modes of relatedness which highlight their place within the system's structure. And since the system is held to be a true reflection of actuality, this means that the classification pinpoints the place of each dhamma within the overall structure of actuality.

The Abhidhamma's attempt to comprehend the nature of reality, contrary to that of classical science in the West, does not proceed from the standpoint of a neutral observer looking outwards towards the external world. The primary concern of the Abhidhamma is to understand the nature of experience, and thus the reality on which it focuses is conscious reality, the world as given in experience, comprising both knowledge and the known in the widest sense. For this reason the philosophical enterprise of the Abhidhamma shades off into a phenomenological psychology. To facilitate the understanding of experienced reality, the Abhidhamma embarks upon an elaborate analysis of the mind as it presents itself to introspective meditation. It classifies consciousness into a variety of types, specifies the factors and functions of each type, correlates them with their objects and physiological bases, and shows how the different types of consciousness link up with each other and with material phenomena to constitute the ongoing process of experience.

This analysis of mind is not motivated by theoretical curiosity but by the overriding practical aim of the Buddha's teaching, the attainment of deliverance from suffering. Since the Buddha traces suffering to our tainted attitudes -- a mental orientation rooted in greed, hatred, and delusion -- the Abhidhamma's phenomenological psychology also takes on the character of a psychological ethics, understanding the term "ethics" not in the narrow sense of a code of morality but as a complete guide to noble living and mental purification. Accordingly we find that the Abhidhamma distinguishes states of mind principally on the basis of ethical criteria: the wholesome and the unwholesome, the beautiful factors and the defilements. Its schematization of consciousness follows a

hierarchical plan that corresponds to the successive stages of purity to which the Buddhist disciple attains by practice of the Buddha's path. This plan traces the refinement of the mind through the progression of meditative absorptions, the fine-material-sphere and immaterial-sphere jhanas, then through the stages of insight and the wisdom of the supramundane paths and fruits. Finally, it shows the whole scale of ethical development to culminate in the perfection of purity attained with the mind's irreversible emancipation from all defilements.

All three dimensions of the Abhidhamma -- the philosophical, the psychological, and the ethical -- derive their final justification from the cornerstone of the Buddha's teaching, the program of liberation announced by the Four Noble Truths. The ontological survey of dhammas stems from the Buddha's injunction that the noble truth of suffering, identified with the world of conditioned phenomena as a whole, must be fully understood (//parinneyya//). The prominence of mental defilements and requisites of enlightenment in its schemes of categories, indicative of its psychological and ethical concerns, connects the Abhidhamma to the second and fourth noble truths, the origin of suffering and the way leading to its end. And the entire taxonomy of dhammas elaborated by the system reaches its consummation in the "unconditioned element" (//asankhata dhatu//), which is Nibbana, the third noble truth, that of the cessation of suffering.

The Twofold Method

The great Buddhist commentator, Acariya Buddhaghosa, explains the word "Abhidhamma" as meaning "that which exceeds and is distinguished from the Dhamma" (//dhammatireka-dhammavisesa//), the prefix //abhi// having the sense of preponderance and distinction, and //dhamma// here signifying the teaching of the Sutta Pitaka. [1] When the Abhidhamma is said to surpass the teaching of the Suttas, this is not intended to suggest that the Suttanta teaching is defective in any degree or that the Abhidhamma proclaims some new revelation of esoteric doctrine

unknown to the Suttas. Both the Suttas and the Abhidhamma are grounded upon the Buddha's unique doctrine of the Four Noble Truths, and all the principles essential to the attainment of enlightenment are already expounded in the Sutta Pitaka. The difference between the two in no way concerns fundamentals but is, rather, partly a matter of scope and partly a matter of method.

As to scope, the Abhidhamma offers a thoroughness and completeness of treatment that cannot be found in the Sutta Pitaka. Acariya Buddhaghosa explains that in the Suttas such doctrinal categories as the five aggregates, the twelve sense bases, the eighteen elements, and so forth, are classified only partly, while in the Abhidhamma Pitaka they are classified fully according to different schemes of classification, some common to the Suttas, others unique to the Abhidhamma. [2] Thus the Abhidhamma has a scope and an intricacy of detail that set it apart from the Sutta Pitaka.

The other major area of difference concerns method. The discourses contained in the Sutta Pitaka were expounded by the Buddha under diverse circumstances to listeners with very different capacities for comprehension. They are primarily pedagogical in intent, set forth in the way that will be most effective in guiding the listener in the practice of the teaching and in arriving at a penetration of its truth. To achieve this end the Buddha freely employs the didactic means required to make the doctrine intelligible to his listeners. He uses simile and metaphor; he exhorts, advises, and inspires; he sizes up the inclinations and aptitudes of his audience and adjusts the presentation of the teaching so that it will awaken a positive response. For this reason the Suttanta method of teaching is described as //pariyaya-dhammadesana//, the figurative or embellished discourse on the Dhamma.

In contrast to the Suttas, the Abhidhamma Pitaka is intended to divulge as starkly and directly as possible the totalistic system that underlies the Suttanta expositions and upon which the individual discourses draw. The Abhidhamma takes no account of the personal inclinations and cognitive capacities of the listeners; it makes no concessions to particular pragmatic requirements. It reveals the

architectonics of actuality in an abstract, formalistic manner utterly devoid of literary embellishments and pedagogical expedients. Thus the Abhidhamma method is described as the //nippariyaya-dhammadesana//, the literal or unembellished discourse on the Dhamma.

This difference in technique between the two methods also influences their respective terminologies. In the Suttas the Buddha regularly makes use of conventional language (//voharavacana//) and accepts conventional truth (//sammutisacca//), truth expressed in terms of entities that do not possess ontological ultimacy but can still be legitimately referred to them. Thus in the Suttas the Buddha speaks of "I" and "you," of "man" and "woman," of living beings, persons, and even self as though they were concrete realities. The Abhidhamma method of exposition, however, rigorously restricts itself to terms that are valid from the standpoint of ultimate truth (//paramatthasacca//): dhammas, their characteristics, their functions, and their relations. Thus in the Abhidhamma all such conceptual entities provisionally accepted in the Suttas for purposes of meaningful communication are resolved into their ontological ultimates, into bare mental and material phenomena that are impermanent, conditioned, and dependently arisen, empty of any abiding self or substance.

But a qualification is necessary. When a distinction is drawn between the two methods, this should be understood to be based on what is most characteristic of each Pitaka and should not be interpreted as an absolute dichotomy. To some degree the two methods overlap and interpenetrate. Thus in the Sutta Pitaka we find discourses that employ the strictly philosophical terminology of aggregates, sense bases, elements, etc., and thus come within the bounds of the Abhidhamma method. Again, within the Abhidhamma Pitaka we find sections, even a whole book (the //Puggalapannatti//), that depart from the rigorous manner of expression and employ conventional terminology, thus coming within the range of the Suttanta method.

Distinctive Features of the Abhidhamma

~~~~~~

Apart from its strict adherence to the philosophical method of exposition, the Abhidhamma makes a number of other noteworthy contributions integral to its task of systemization. One is the employment, in the main books of the Abhidhamma Pitaka, of a //matika// -- a matrix or schedule of categories -- as the blueprint for the entire edifice. This matrix, which comes at the very beginning of the //Dhammasangani// as a preface to the Abhidhamma Pitaka proper, consists of 122 modes of classification special to the Abhidhamma method. Of these, twenty-two are triads (//tika//), sets of three terms into which the fundamental dhammas are to be distributed; the remaining hundred are dyads (//duka//), sets of two terms used as a basis for classification. [3] The matrix serves as a kind of grid for sorting out the complex manifold of experience in accordance with principles determined by the purposes of the Dhamma. For example, the triads include such sets as states that are wholesome, unwholesome, indeterminate; states associated with pleasant feeling, painful feeling, neutral feeling; states that are kamma results, productive of kamma results, neither; and so forth. The dyads include such sets as states that are roots, not roots; states concomitant with roots, not so concomitant; states that are conditioned, unconditioned; states that are mundane, supramundane; and so forth. By means of its selection of categories, the matrix embraces the totality of phenomena, illuminating it from a variety of angles philosophical, psychological, and ethical in nature.

A second distinguishing feature of the Abhidhamma is the dissection of the apparently continuous stream of consciousness into a succession of discrete evanescent cognitive events called //cittas//, each a complex unity involving consciousness itself, as the basic awareness of an object, and a constellation of mental factors (//cetasika//) exercising more specialized tasks in the act of cognition. Such a view of consciousness, at least in outline, can readily be derived from the Sutta Pitaka's analysis of experience into the five aggregates, among which the four mental aggregates are always inseparably conjoined, but the conception remains there merely suggestive. In the Abhidhamma Pitaka the suggestion is not simply picked up, but is expanded into an
~~~~~~

extraordinarily detailed and coherent picture of the functioning of consciousness both in its microscopic immediacy and in its extended continuity from life to life.

A third contribution arises from the urge to establish order among the welter of technical terms making up the currency of Buddhist discourse. In defining each of the dhammas, the Abhidhamma texts collate long lists of synonyms drawn mostly from the Suttas. This method of definition shows how a single dhamma may enter under different names into different sets of categories. For example, among the defilements, the mental factor of greed (//lobha//) may be found as the taint of sensual desire, the taint of (attachment to) existence, the bodily knot of covetousness, clinging to sensual pleasures, the hindrance of sensual desire, etc.; among the requisites of enlightenment, the mental factor of wisdom (//panna//) may be found as the faculty and power of wisdom, the enlightenment factor of investigation of states, the path factor of right view, etc. In establishing these correspondences, the Abhidhamma helps to exhibit the interconnections between doctrinal terms that might not be apparent from the Suttas themselves. In the process it also provides a precision-made tool for interpreting the Buddha's discourses.

The Abhidhamma conception of consciousness further results in a new primary scheme for classifying the ultimate constituents of existence, a scheme which eventually, in the later Abhidhamma literature, takes precedence over the schemes inherited from the Suttas such as the aggregates, sense bases, and elements. In the Abhidhamma Pitaka the latter categories still loom large, but the view of mind as consisting of momentary concurrences of consciousness and its concomitants leads to a fourfold method of classification more congenial to the system. This is the division of actuality into the four ultimate realities (//paramattha//): consciousness, mental factors, material phenomena, and Nibbana (//citta//, //cetasika//, //rupa//, //nibbana//), the first three comprising conditioned reality and the last the unconditioned element.

The last novel feature of the Abhidhamma method to be noted here -- contributed by the final book of the Pitaka, the //Patthana// -- is a

set of twenty-four conditional relations laid down for the purpose of showing how the ultimate realities are welded into orderly processes. This scheme of conditions supplies the necessary complement to the analytical approach that dominates the earlier books of the Abhidhamma. The method of analysis proceeds by dissecting apparent wholes into their component parts, thereby exposing their voidness of any indivisible core that might qualify as self or substance. The synthetic method plots the conditional relations of the bare phenomena obtained by analysis to show that they are not isolated self-contained units but nodes in a vast multi-layered web of inter-related, inter-dependent events. Taken in conjunction, the analytical method of the earlier treatises of the Abhidhamma Pitaka and the synthetic method of the //Patthana// establish the essential unity of the twin philosophical principles of Buddhism, non-self or egolessness (//anatta//) and dependent arising or conditionality (//paticca samuppada//). Thus the foundation of the Abhidhamma methodology remains in perfect harmony with the insights that lie at the heart of the entire Dhamma.

The Origins of the Abhidhamma

Although modern critical scholarship attempts to explain the formation of the Abhidhamma by a gradual evolutionary process, [4] Theravada orthodoxy assigns its genesis to the Buddha himself. According to the Great Commentary (//maha-atthakatha//) quoted by Acariya Buddhaghosa, "What is known as Abhidhamma is not the province nor the sphere of a disciple; it is the province, the sphere of the Buddhas." [5] The commentarial tradition holds, moreover, that it was not merely the spirit of the Abhidhamma, but the letter as well, that was already realized and expounded by the Buddha during his lifetime.

The //Atthasalini// relates that in the fourth week after the Enlightenment, while the Blessed One was still dwelling in the vicinity of the Bodhi Tree, he sat in a jewel house (//ratanaghara//) in the northwest direction. This jewel house was not literally a house

made of precious stones, but was the place where he contemplated the seven books of the Abhidhamma Pitaka. He contemplated their contents in turn, beginning with the //Dhammasangani//, but while investigating the first six books his body did not emit rays. However, upon coming to the //Patthana//, when "he began to contemplate the twenty-four universal conditional relations of root, object, and so on, his omniscience certainly found its opportunity therein. For as the great fish Timiratipingala finds room only in the great ocean 84,000 yojanas in depth, so his omniscience truly finds room only in the Great Book. Rays of six colours -- indigo, golden, red, white, tawny, and dazzling -- issued from the Teacher's body, as he was contemplating the subtle and abstruse Dhamma by his omniscience which had found such opportunity." [6]

Theravada orthodoxy thus maintains that the Abhidhamma Pitaka is authentic Word of the Buddha, in this respect differing from an early rival school, the Sarvastivadins. This school also had an Abhidhamma Pitaka consisting of seven books, considerably different in detail from the Theravada treatises. According to the Sarvastivadins, the books of the Abhidhamma Pitaka were composed by Buddhist disciples, several being attributed to authors who appeared generations after the Buddha. The Theravada school, however, holds that the Blessed One himself expounded the books of the Abhidhamma, except for the detailed refutation of deviant views in the //Kathavatthu//, which was the work of the Elder Moggaliputta Tissa during the reign of Emperor Asoka.

The Pali Commentaries, apparently drawing upon an old oral tradition, maintain that the Buddha expounded the Abhidhamma, not in the human world to his human disciples, but to the assembly of devas or gods in the Tavatimsa heaven. According to this tradition, just prior to his seventh annual rains retreat the Blessed One ascended to the Tavatimsa heaven and there, seated on the Pandukambala stone at the foot of the Paricchattaka tree, for the three months of the rains he taught the Abhidhamma to the devas who had assembled from the ten thousand world-systems. He made the chief recipient of the teaching his mother, Mahamaya-devi, who had been reborn as a deva. The reason the Buddha taught the Abhidhamma in the deva world rather than in the human realm, it is said, is because in order to give a complete

picture of the Abhidhamma it has to be expounded from the beginning to the end to the same audience in a single session. Since the full exposition of the Abhidhamma requires three months, only devas and Brahmas could receive it in unbroken continuity, for they alone are capable of remaining in one posture for such a length of time.

However, each day, to sustain his body, the Buddha would descend to the human world to go on almsround in the northern region of Uttarakuru. After collecting almsfood he went to the shore of Anotatta Lake to partake of his meal. The Elder Sariputta, the General of the Dhamma, would meet the Buddha there and receive a synopsis of the teaching given that day in the deva world: "Then to him the Teacher gave the method, saying, 'Sariputta, so much doctrine has been shown.' Thus the giving of the method was to the chief disciple, who was endowed with analytical knowledge, as though the Buddha stood on the edge of the shore and pointed out the ocean with his open hand. To the Elder also the doctrine taught by the Blessed One in hundreds and thousands of methods became very clear." [7]

Having learnt the Dhamma taught him by the Blessed One, Sariputta in turn taught it to his own circle of 500 pupils, and thus the textual recension of the Abhidhamma Pitaka was established. To the Venerable Sariputta is ascribed the textual order of the Abhidhamma treatises as well as the numerical series in the //Patthana//. Perhaps we should see in these admissions of the //Atthasalini// an implicit acknowledgement that while the philosophical vision of the Abhidhamma and its basic architecture originate from the Buddha, the actual working out of the details, and perhaps even the prototypes of the texts themselves, are to be ascribed to the illustrious Chief Disciple and his entourage of students. In other early Buddhist schools, too, the Abhidhamma is closely connected with the Venerable Sariputta, who in some traditions is regarded as the literal author of Abhidhamma treatises. [8]

The Seven Books

A brief outline of the contents of the seven canonical Abhidhamma books will provide some insight into the plethora of textual material to be condensed and summarized by the //Abhidhammattha Sangaha//. The first book, the //Dhammasangani//, is the fountainhead of the entire system. The title may be translated "Enumeration of Phenomena," and the work does in fact undertake to compile an exhaustive catalogue of the ultimate constituents of existence.

Opening with the //matika//, the schedule of categories which serves as the framework for the whole Abhidhamma, the text proper is divided into four chapters. The first, "States of Consciousness," takes up about half of the book and unfolds as an analysis of the first triad in the //matika//, that of the wholesome, the unwholesome, and the indeterminate. To supply that analysis, the text enumerates 121 types of consciousness classified by way of their ethical quality. [9] Each type of consciousness is in turn dissected into its concomitant mental factors, which are individually defined in full. The second chapter, "On Matter," continues the inquiry into the ethically indeterminate by enumerating and classifying the different types of material phenomena. The third chapter, called "The Summary," offers concise explanations of all the terms in the Abhidhamma matrix and the Suttanta matrix as well. Finally, a concluding "Synopsis" provides a more condensed explanation of the Abhidhamma matrix but omits the Suttanta matrix.

The //Vibhanga//, the "Book of Analysis," consists of eighteen chapters, each a self-contained dissertation, dealing in turn with the following: aggregates, sense bases, elements, truths, faculties, dependent arising, foundations of mindfulness, supreme efforts, means to accomplishment, factors of enlightenment, the eightfold path, jhanas, illimitables, training rules, analytical knowledges, kinds of knowledge, minor points (a numerical inventory of defilements), and "the heart of the doctrine" (//dhammahadaya//), a psycho-cosmic topography of the Buddhist universe. Most of the chapters in the //Vibhanga//, though not all, involve three sub-sections: an analysis according to the methodology of the Suttas; an analysis according to the methodology of the Abhidhamma proper; and an interrogation section, which applies the categories of the matrix to the subject

under investigation.

The //Dhatukatha//, the "Discourse on Elements," is written entirely in catechism form. It discusses all phenomena with reference to the three schemata of aggregates, sense bases, and elements, seeking to determine whether, and to what extent, they are included or not included in them, and whether they are associated with them or dissociated from them.

The //Puggalapannatti//, "Concepts of Individuals," is the one book of the Abhidhamma Pitaka that is more akin to the method of the Suttas than to the Abhidhamma proper. The work begins with a general enumeration of types of concepts, and this suggests that it was originally intended as a supplement to the other books in order to take account of the conceptual realities excluded by the strict application of the Abhidhamma method. The bulk of the work provides formal definitions of different types of individuals. It has ten chapters: the first deals with single types of individuals; the second with pairs; the third with groups of three, etc.

The //Kathavatthu//, "Points of Controversy," is a polemical treatise ascribed to the Elder Moggaliputta Tissa. He is said to have compiled it during the time of Emperor Asoka, 218 years after the Buddha's Parinibbana, in order to refute the heterodox opinions of the Buddhist schools outside the Theravadin fold. The Commentaries defend its inclusion in the Canon by holding that the Buddha himself, foreseeing the errors that would arise, laid down the outline of rebuttal, which Moggaliputta Tissa merely filled in according to the Master's intention.

The //Yamaka//, the "Book of Pairs," has the purpose of resolving ambiguities and defining the precise usage of technical terms. It is so called owing to its method of treatment, which throughout employs the dual grouping of a question and its converse formulation. For instance, the first pair of questions in the first chapter runs thus: "Are all wholesome phenomena wholesome roots? And are all wholesome roots wholesome phenomena?" The book contains ten chapters: roots, aggregates, sense bases, elements, truths, formations, latent

dispositions, consciousness, phenomena, and faculties.

The //Patthana//, the "Book of Conditional Relations," is probably the most important work of the Abhidhamma Pitaka and thus is traditionally designated the "Great Treatise" (//mahapakarana//). Gigantic in extent as well as in substance, the book comprises five volumes totalling 2500 pages in the Burmese-script Sixth Council edition. The purpose of the //Patthana// is to apply its scheme of twenty-four conditional relations to all the phenomena incorporated in the Abhidhamma matrix. The main body of the work has four great divisions: origination according to the positive method, according to the negative method, according to the positive-negative method, and according to the negative-positive method. Each of these in turn has six sub-divisions: origination of triads, of dyads, of dyads and triads combined, of triads and dyads combined, of triads and triads combined, and of dyads and dyads combined. Within this pattern of twenty-four sections, the twenty-four modes of conditionality are applied in due order to all the phenomena of existence in all their conceivable permutations. Despite its dry and tabular format, even from a "profane" humanistic viewpoint the //Patthana// can easily qualify as one of the truly monumental products of the human mind, astounding in its breadth of vision, its rigorous consistency, and its painstaking attention to detail. To Theravada orthodoxy, it is the most eloquent testimony to the Buddha's unimpeded knowledge of omniscience.

The Commentaries

The books of the Abhidhamma Pitaka have inspired a voluminous mass of exegetical literature composed in order to fill out, by way of explanation and exemplification, the scaffoldings erected by the canonical texts. The most important works of this class are the authorized commentaries of Acariya Buddhaghosa. These are three in number: the //Atthasalini//, "The Expositor," the commentary to the //Dhammasangani//; the //Sammohavinodani//, "The Dispeller of

Delusion," the commentary to the //Vibhanga//; and the //Pancappakarana Atthakatha//, the combined commentary to the other five treatises. To this same stratum of literature also belongs the //Visuddhimagga//, "The Path of Purification," also composed by Buddhaghosa. Although this last work is primarily an encyclopaedic guide to meditation, its chapters on "the soil of understanding" (XIV-XVII) lay out the theory to be mastered prior to developing insight and thus constitute in effect a compact dissertation on Abhidhamma. Each of the commentaries in turn has its subcommentary (//mulatika//), by an elder of Sri Lanka named Acariya Ananda, and these in turn each have a sub-subcommentary (//anutika//), by Ananda's pupil Dhammapala (who is to be distinguished from the great Acariya Dhammapala, author of the //tikas// to Buddhaghosa's works).

When the authorship of the Commentaries is ascribed to Acariya Buddhaghosa, it should not be supposed that they are in any way original compositions, or even original attempts to interpret traditional material. They are, rather, carefully edited versions of the vast body of accumulated exegetical material that Buddhaghosa found at the Mahavihara in Anuradhapura. This material must have preceded the great commentator by centuries, representing the collective efforts of generations of erudite Buddhist teachers to elucidate the meaning of the canonical Abhidhamma. While it is tempting to try to discern evidence of historical development in the Commentaries over and beyond the ideas embedded in the Abhidhamma Pitaka, it is risky to push this line too far, for a great deal of the canonical Abhidhamma seems to require the Commentaries to contribute the unifying context in which the individual elements hang together as parts of a systematic whole and without which they lose important dimensions of meaning. It is thus not unreasonable to assume that a substantial portion of the commentarial apparatus originated in close proximity to the canonical Abhidhamma and was transmitted concurrently with the latter, though lacking the stamp of finality it was open to modification and amplification in a way that the canonical texts were not.

Bearing this in mind, we might briefly note a few of the Abhidhammic conceptions that are characteristic of the Commentaries but either

unknown or recessive in the Abhidhamma Pitaka itself. One is the detailed account of the cognitive process (//cittavithi//). While this conception seems to be tacitly recognized in the canonical books, it now comes to be drawn out for use as an explanatory tool in its own right. The functions of the //cittas, the different types of consciousness, are specified, and in time the //cittas// themselves come to be designated by way of their functions. The term //khana//, "moment," replaces the canonical //samaya//, "occasion," as the basic unit for delimiting the occurrence of events, and the duration of a material phenomenon is determined to be seventeen moments of mental phenomena. The division of a moment into three sub-moments -- arising, presence, and dissolution -- also seems to be new to the Commentaries. [10] The organization of material phenomena into groups (//kalapa//), though implied by the distinction between the primary elements of matter and derived matter, is first spelled out in the Commentaries, as is the specification of the heart-base (//hadayavatthu//) as the material basis for mind element and mind-consciousness element.

The Commentaries introduce many (though not all) of the categories for classifying kamma, and work out the detailed correlations between kamma and its results. They also close off the total number of mental factors (//cetasika//). The phrase in the //Dhammasangani//, "or whatever other (unmentioned) conditionally arisen immaterial phenomena there are on that occasion," apparently envisages an open-ended universe of mental factors, which the Commentaries delimit by specifying the "or-whatever states" (//yevapanaka dhamma//). Again, the Commentaries consummate the dhamma theory by supplying the formal definition of dhammas as "things which bear their own intrinsic nature" (//attano sabhavam dharenti ti dhamma//). The task of defining specific dhammas is finally rounded off by the extensive employment of the fourfold defining device of characteristic, function, manifestation, and proximate cause, a device derived from a pair of old exegetical texts, the //Petakopadesa// and the //Nettipakarana//.

The Abhidhammattha Sangaha

~~~~~~~~~~~~~~~~~~~~~~~~~~~~
~~~~~~~~~~~~~~~~~~~~~~~~~~~~

As the Abhidhamma system, already massive in its canonical version, grew in volume and complexity, it must have become increasingly unwieldy for purposes of study and comprehension. Thus at a certain stage in the evolution of Theravada Buddhist thought the need must have become felt for concise summaries of the Abhidhamma as a whole in order to provide the novice student of the subject with a clear picture of its main outlines -- faithfully and thoroughly, yet without an unmanageable mass of detail.

To meet this need there began to appear, perhaps as early as the fifth century and continuing well through the twelfth, short manuals or compendia of the Abhidhamma. In Burma these are called //let-than// or "little-finger manuals," of which there are nine:

1. //Abhidhammattha Sangaha//, by Acariya Anuruddha;
2. //Namarupa-pariccheda//, by the same;
3. //Paramattha-vinicchaya//, by the same (?);
4. //Abhidhammavatara//, by Acariya Buddhadatta (a senior contemporary of Buddhaghosa);
5. //Ruparupa-vibhaga//, by the same;
6. //Sacca-sankhepa//, by Bhadanta Dhammapala (probably Sri Lankan; different from the great subcommentator);
7. //Moha-vicchedani//, by Bhadanta Kassapa (South Indian or Sri Lankan);
8. //Khema-pakarana//, by Bhadanta Khema (Sri Lankan);
9. //Namacara-dipaka//, by Bhadanta Saddhamma Jotipala (Burman).

Among these, the work that has dominated Abhidhamma studies from about the twelfth century to the present day is the first mentioned, the //Abhidhammattha Sangaha//, "The Compendium of Things contained in the Abhidhamma." Its popularity may be accounted for by its remarkable balance between concision and comprehensiveness. Within its short scope all the essentials of the Abhidhamma are briefly and carefully summarized. Although the book's manner of treatment is extremely terse even to the point of obscurity when read alone, when studied under a qualified teacher or with the aid of an explanatory guide, it leads the student confidently through the winding maze of the system to a

clear perception of its entire structure. For this reason throughout the Theravada Buddhist world the //Abhidhammattha Sangaha// is always used as the first textbook in Abhidhamma studies. In Buddhist monasteries, especially in Burma, novices and young bhikkhus are required to learn the //Sangaha// by heart before they are permitted to study the books of the Abhidhamma Pitaka and its Commentaries.

Detailed information about the author of the manual, Acariya Anuruddha, is virtually non-existent. He is regarded as the author of two other manuals, cited above, and it is believed in Buddhist countries that he wrote altogether nine compendia, of which only these three have survived. The //Paramattha-vinicchaya// is written in an elegant style of Pali and attains a high standard of literary excellence. According to the colophon, its author was born in Kaveri in the state of Kancipura (Conjeevaram) in South India. Acariya Buddhadatta and Acariya Buddhaghosa are also said to have resided in the same area, and the subcommentator Acariya Dhammapala was probably a native of the region. There is evidence that for several centuries Kancipura had been an important centre of Theravada Buddhism from which learned bhikkhus went to Sri Lanka for further study.

It is not known exactly when Acariya Anuruddha lived and wrote his manuals. An old monastic tradition regards him as having been a fellow student of Acariya Buddhadatta under the same teacher, which would place him in the fifth century. According to this tradition, the two elders wrote their respective books, the //Abhidhammattha Sangaha// and the //Abhidhammavatara//, as gifts of gratitude to their teacher, who remarked: "Buddhadatta has filled a room with all kinds of treasure and locked the door, while Anuruddha has also filled a room with treasure but left the door open." [11] Modern scholars, however, do not endorse this tradition, maintaining on the basis of the style and content of Anuruddha's work that he could not have lived earlier than the eighth century, more probably between the tenth and early twelfth centuries. [12]

In the colophon to the //Abhidhammattha Sangaha// Acariya Anuruddha states that he wrote the manual at the Mulasoma Monastery, which all exegetical traditions place in Sri Lanka. There are several ways to

reconcile this fact with the concluding stanzas of the //Paramattha-vinicchaya//, which state that he was born in Kancipura. One hypothesis is that he was of South Indian descent but came to Sri Lanka, where he wrote the //Sangaha//. Another, advanced by G.P. Malalasekera, holds that he was a native of Sri Lanka who spent time at Kancipura (which, however, passes over his statement that he was //born// in Kancipura). Still a third hypothesis, proposed by Ven. A.P. Buddhadatta Mahathera, asserts that there were two different monks named Anuruddha, one in Sri Lanka who was the author of the //Abhidhammattha Sangaha//, another in Kancipura who wrote the //Paramattha-vinicchaya//. [13]

Commentaries on the Sangaha

Owing to its extreme concision, the //Abhidhammattha Sangaha// cannot be easily understood without explanation. Therefore to elucidate its terse and pithy synopsis of the Abhidhamma philosophy, a great number of //tikas// or commentaries have been written upon it. In fact, this work has probably stimulated more commentaries than any other Pali text, written not only in the Pali language but also in Burmese, Sinhala, Thai, etc. Since the fifteenth century Burma has been the international centre of Abhidhamma studies, and therefore we find many commentaries written on it by Burmese scholars both in Pali and in Burmese. Commentaries on the //Sangaha// in Pali alone number nineteen, of which the following are the most important:

1. //Abhidhammatthasangaha-Tika//, also known as the //Porana-Tika//, "the Old Commentary." This is a very small //tika// written in Sri Lanka in the twelfth century by an elder named Acariya Navavimalabuddhi.

2. //Abhidhammatthavibhavini-Tika//, or in brief, the //Vibhavini//, written by Acariya Sumangalasami, pupil of the eminent Sri Lankan elder Sariputta Mahasami, also in the twelfth century. This //tika// quickly superceded the Old Commentary and is generally considered the

most profound and reliable exegetical work on the //Sangaha//. In Burma this work is known as //tika-gyaw//, "the Famous Commentary." The author is greatly respected for his erudition and mastery of the Abhidhamma. He relies heavily on older authorities such as the //Abhidhamma-Anutika// and the //Visuddhimagga-Mahatika// (also known as the //Paramatthamanjusa//). Although Ledi Sayadaw (see below) criticized the //Vibhavini// extensively in his own commentary on the //Sangaha//, its popularity has not diminished but indeed has even increased, and several Burmese scholars have risen to defend it against Ledi Sayadaw's criticisms.

3. //Sankhepa-vannana//, written in the sixteenth century by Bhadanta Saddhamma Jotipala, also known as Chapada Mahathera, a Burmese monk who visited Sri Lanka during the reign of Parakramabahu VI of Kotte (fifteenth century). [14]

4. //Paramatthadipani-Tika//, "The Elucidation of the Ultimate Meaning," by Ledi Sayadaw. Ledi Sayadaw of Burma (1846-1923) was one of the greatest scholar-monks and meditation masters of the Theravada tradition in recent times. He was the author of over seventy manuals on different aspects of Theravada Buddhism, including philosophy, ethics, meditation practice, and Pali grammar. His //tika// created a sensation in the field of Abhidhamma studies because he pointed out 325 places in the esteemed //Vibhavini-tika// where he alleged that errors and misinterpretations had occurred, though his criticisms also set off a reaction in defense of the older work.

5. //Ankura-Tika//, by Vimala Sayadaw. This //tika// was written fifteen years after the publication of the //Paramatthadipani// and supports the commonly accepted opinions of the //Vibhavini// against Ledi Sayadaw's criticisms.

6. //Navanita-Tika//, by the Indian scholar Dhammananda Kosambi, published originally in //devanagari// script in 1933. The title of this work means literally "The Butter Commentary," and it is so called probably because it explains the //Sangaha// in a smooth and simple manner, avoiding philosophical controversy.

Outline of the Sangaha

The //Abhidhammattha Sangaha// contains nine chapters. It opens by enumerating the four ultimate realities -- consciousness, mental factors, matter, and Nibbana. The detailed analysis of these is the project set for its first six chapters. Chapter I is the Compendium of Consciousness, which defines and classifies the 89 and 121 //cittas// or types of consciousness. In scope this first chapter covers the same territory as the States of Consciousness chapter of the //Dhammasangani//, but it differs in approach. The canonical work begins with an analysis of the first triad in the //matika//, and therefore initially classifies consciousness on the basis of the three ethical qualities of wholesome, unwholesome, and indeterminate; then within those categories it subdivides consciousness on the basis of plane into the categories of sense sphere, fine-material sphere, immaterial sphere, and supramundane. The //Sangaha//, on the other hand, not being bound to the //matika//, first divides consciousness on the basis of plane, and then subdivides it on the basis of ethical quality.

The second chapter, the Compendium of Mental Factors, first enumerates the fifty-two //cetasikas// or concomitants of consciousness, divided into four classes: universals, occasionals, unwholesome factors, and beautiful factors. Thereafter the factors are investigated by two complimentary methods: first, the method of association (//sampayoganaya//), which takes the mental factors as the unit of inquiry and elicits the types of consciousness with which they are individually associated; and second, the method of inclusion or combination (//sangahanaya//), which takes the types of consciousness as the unit of inquiry and elicits the mental factors that enter into the constitution of each. This chapter again draws principally upon the first chapter of the //Dhammasangani//.

The third chapter, entitled Compendium of the Miscellaneous, classifies the types of consciousness along with their factors with

respect to six categories: root (//hetu//), feeling (//vedana//), function (//kicca//), door (//dvara//), object (//arammana//), and base (//vatthu//).

The first three chapters are concerned principally with the structure of consciousness, both internally and in relation to external variables. In contrast, the next two chapters deal with the dynamics of consciousness, that is, with its modes of occurrence. According to the Abhidhamma, consciousness occurs in two distinct but intertwining modes -- as active process and as passive flow. Chapter IV explores the nature of the "cognitive process," Chapter V the passive "process-freed" flow, which it prefaces with a survey of the traditional Buddhist cosmology. The exposition here is largely based upon the Abhidhamma Commentaries. Chapter VI, Compendium of Matter, turns from the mental realm to the material world. Based primarily on the second chapter of the //Dhammasangani//, it enumerates the types of material phenomena, classifies them in various ways, and explains their modes of origination. It also introduces the commentarial notion of material groups, which it treats in detail, and describes the occurrence of material processes in the different realms of existence. This chapter concludes with a short section on the fourth ultimate reality, Nibbana, the only unconditioned element in the system.

With the sixth chapter, Acariya Anuruddha has completed his analytical exposition of the four ultimate realities, but there remain several important subjects which must be explained to give a complete picture of the Abhidhamma. These are taken up in the last three chapters. Chapter VII, the Compendium of Categories, arranges the ultimate realities into a variety of categorical schemes that fall under four broad headings: a compendium of defilements; a compendium of mixed categories, which include items of different ethical qualities; a compendium of the requisites of enlightenment; and a compendium of the whole, an all-inclusive survey of the Abhidhamma ontology. This chapter leans heavily upon the //Vibhanga//, and to some extent upon the //Dhammasangani//.

Chapter VIII, the Compendium of Conditionality, is introduced to include the Abhidhamma teaching on the inter-relatedness of physical

and mental phenomena, thereby complementing the analytical treatment of the ultimate realities with a synthetical treatment laying bare their functional correlations. The exposition summarily presents two alternative approaches to conditionality found in the Pali Canon. One is the method of dependent arising, prominent in the Suttas and analyzed from both Suttanta and Abhidhamma angles in the //Vibhanga// (VI). This method examines conditionality in terms of the cause-and-result pattern that maintains bondage to //samsara//, the cycle of birth and death. The other is the method of the Patthana//, with its twenty-four conditional relations. This chapter concludes with a brief account of concepts (//pannatti//), thereby drawing in the //Puggalapannatti//, at least by implication.

The ninth and final chapter of the //Sangaha// is concerned, not with theory, but with practice. This is the Compendium of Meditation Subjects. This chapter functions as a kind of summary of the //Visuddhimagga//. It concisely surveys all the methods of meditation exhaustively explained in the latter work, and it sets forth condensed accounts of the stages of progress in both systems of meditation, concentration and insight. Like the masterwork it summarizes, it concludes with an account of the four types of enlightened individuals and the attainments of fruition and cessation. This arrangement of the //Abhidhammattha Sangaha// perhaps serves to underscore the ultimate soteriological intent of the Abhidhamma. All the theoretical analysis of mind and matter finally converges upon the practice of meditation, and the practice culminates in the attainment of the supreme goal of Buddhism, the liberation of the mind by non-clinging.

NOTES

1. Asl. 2; //Expos.//, p.3.

2. Asl. 2-3; //Expos.//, pp. 3-4.

3. The //Dhammasangani// also includes a Suttanta matrix consisting of forty-two dyads taken from the Suttas. However, this is ancillary to the Abhidhamma proper, and serves more as an appendix for providing succinct definitions of key Suttanta terms. Moreover, the definitions themselves are not framed in terms of Abhidhamma categories and the Suttanta matrix is not employed in any subsequent books of the Abhidhamma Pitaka.

4. See, for example, the following: A.K. Warder, //Indian Buddhism//, 2nd rev. ed. (Delhi: Motilal Banarsidass, 1980), pp. 218-24; Fumimaro Watanabe, //Philosophy and its Development in the Nikayas and Abhidhamma// (Delhi: Motilal Banarsidass, 1983), pp. 18-67; and the article "Abhidharma Literature" by Kogen Mizuno in //Encyclopaedia of Buddhism//, Fasc. 1 (Govt. of Ceylon, 1961).

5. Asl. 410; //Expos.//, p. 519

6. Asl. 13; //Expos.//, pp. 16-17

7. Asl. 16; //Expos.//, p. 20

8. The first book of the Sarvastivadin Abhidharma, the //Sangitiparyaya//, is ascribed to Sariputta by Chinese sources (but not by Sanskrit and Tibetan sources), while the second book, the //Dharmaskandha//, is ascribed to him by Sanskrit and Tibetan sources (but not by Chinese sources). The Chinese canon also contains a work entitled the //Shariputra Abhidharma-Shastra//, the school of which is not known.

9. These are reduced to the familiar eighty-nine cittas by grouping together the five cittas into which each path and fruition consciousness is divided by association with each of the five jhanas.

10. The //Yamaka//, in its chapter "Citta-yamaka," uses the term //khana// to refer to the subdivision of a moment and also introduces the //uppada-khana// and //bhanga-khana//, the sub-moments of arising and dissolution. However, the threefold scheme of sub-moments seems

to appear first in the Commentaries.

11. Ven. A. Devananda Adhikarana Nayaka Thero, in Preface to //Paramattha-vinicchaya and Paramattha-vibhavini-vyakhya// (Colombo: Vidya Sagara Press, 1926), p. iii.

12. G.P. Malalasekera, //The Pali Literature of Ceylon// (Colombo: M.D. Gunasena, repr. 1958), pp. 168-70. Malalasekera points out that James Gray, in his edition of //Buddhaghosuppatti//, gives a chronological list of saintly and learned men of Southern India, taken from the Talaing records, and there we find Anuruddha mentioned after authors who are supposed to have lived later than the seventh or eighth century. Since Bhadanta Sariputta Mahasami compiled a Sinhala paraphrase of the //Abhidhammattha Sangaha// during the reign of Parakrama-Bahu the Great (1164-97), this places Anuruddha earlier than the middle of the twelfth century.

13. See the article "Anuruddha (5)" in //Encyclopaedia of Buddhism//, Fasc. 4 (Govt. of Ceylon, 1965). Ven Buddhadatta's view is also accepted by Warder, //Indian Buddhism//, pp. 533-34.

14. This author is commonly confused with another Burmese monk called Chapada who came to Sri Lanka during the twelfth century and studied under Bhadanta Sariputta. The case for two Chapadas is cogently argued by Ven. A.P. Buddhadatta, //Corrections of Geiger's Mahavamsa, Etc.// (Ambalangoda: Ananda Book Co., 1957), pp. 198-209.

THE BUDDHIST PUBLICATION SOCIETY

The BPS is an approved charity dedicated to making known the Teaching of the Buddha, which has a vital message for people of all creeds. Founded in 1958, the BPS has published a wide variety of books and

booklets covering a great range of topics. Its publications include accurate annotated translations of the Buddha's discourses, standard reference works, as well as original contemporary expositions of Buddhist thought and practice. These works present Buddhism as it truly is -- a dynamic force which has influenced receptive minds for the past 2500 years and is still as relevant today as it was when it first arose. A full list of our publications will be sent upon request with an enclosure of U.S. $1.00 or its equivalent to cover air mail postage.

Christianity is a God centered religion. It sees God as the focus of meaning in human life and history as the unfolding of God's plan. It comes as a suprise to most Christians that there are relgions, such as Buddhism, that are not God centered and have comparitively little to say about Him. The purpose of this essay is to clarify Buddhist ideas about God and make them seem reasonable to the non-Buddhist, even if not persuading him. In this essay instead of talking about "God" I will use the term "the absolute" to avoid confusion. The word "God" carries too many asociations that are difficult to lay aside when discussing the subject from a fresh (Buddhist) perspective. The Encyclopedia of Philosophy defines the absolute as "the ultimate source of reality regarded as one and yet the source of variety; as complete, or perfect, and yet as not divorced from the finite, imperfect world."

First, Buddhists believe that the absolute is not someting you believe in, or worship, but instead something you experience. The experience of the absolute is called enlightenment. Because of this emphasis on experience, the terminology of Buddhism is often elusive. More attention is given to how to attain the experience of the absolute than to a specific description of its character. Indeed Buddhism teaches that no verbal description of the absolute is possible. That is, Buddhism insists that the absolute is ineffable.

While no positive description of the absolute is possible, Buddhism does teach that the absolute can be defined negatively by refuting false ideas of the absolute. Buddhist philosophy is therefore resolutely critical, showing the contradictions inherent in the concepts of their opponents. But while Buddhist philosophy is a critical philosophy, it is also a rational philosophy in that it believes that no contradiction can exist in the absolute. This is in contrast to those forms of mysticism that teach the nature of the absolute is contradictory and paradoxical.

Finally, Buddhism teaches that the absolute is the true nature of the relative. On the question of the transcendence or immanence of the absolute, Buddhism come down on the side of immanence. Only because we misperceive the true nature of the world do we think of it as relative, when we truly understand the world then we see it as the absolute. But this process of perceiving the relative as the absolute is not one of addition, but one of subtraction. That is, one does not gain a new sixth sense from the practice of meditation enabling one to see everyting as godlike

(whatever that might be). Instead one strips away the false concepts about reality which makes the absolute appear as the relative. When one sees the absolute things seem more "ordinary" than before. Thus the enlightened person is not unworldly and impractical, but more grounded in reality and better able to deal with the humdrum details of life than anyone else.

PART ONE: THE ABSTRACT

"Released...with unrestricted awareness."

According to the Pali Canon--the earliest record of the Buddha's teachings now extant--nothing outside of the realm of differentiation can be properly designated by the conventions of language. In one mode of analysis, this realm is divided into the six senses (counting the mind as the sixth) & their objects; in another, it is divided into the five aggregates of form, feeling, perception, thought processes, & consciousness. The two modes cover mutually equivalent areas. However, one passage in the Canon points to another realm where the six senses & their objects cease, which can be experienced although not otherwise described, even in terms of existing, not existing, both, or neither. The attainment of the Buddhist goal belongs to this second realm, and this of course raised problems for the Buddha in how to teach & describe the goal.

He solved the problem by illustrating the goal with similes & metaphors. The best-known metaphor for the goal is the name nibbana (nirvana), which means the extinguishing of a fire. Attempts to work out the implications of this metaphor have all too often taken it out of context. Some writers, drawing on modern, every-day notions of fire, come to the conclusion that nibbana implies extinction, inasmuch as we feel that a fire goes out of existence when extinguished. Others, however, note that the Vedas--ancient Indian religious texts that predate Buddhism by many thousands of years--described fire as immortal: Even when extinguished it simply goes into hiding, in a latent, diffused state, only to be reborn when a new fire is lit. These writers then assume that the Buddha accepted the Vedic theory in its entirety, and so maintain that nibbana implies eternal existence.

The weakness of both these interpretations is that they do not take into account the way the Pali Canon describes (1) the workings of

fire, (2) the limits beyond which no phenomenon may be described, and (3) the precise implications that the Buddha himself drew from his metaphor in light of (1) & (2). The purpose of this essay is to place this metaphor in its original context, so as to show what it was and was not meant to imply.

Any discussion of the way the Buddha used the term nibbana must begin with the distinction that there are two levels of nibbana (or, to use the original terminology, two nibbana properties). The first is the nibbana experienced by a person who has attained the goal and is still alive. This is described metaphorically as the extinguishing of passion, aversion, & delusion. The second is the nibbana after death. The simile for these two states is the distinction between a fire that has gone out but whose embers are still warm, and one so totally out that its embers are cold. The Buddha used the views of fire current in his day in somewhat different ways when discussing these two levels of nibbana, and so we must consider them separately.

To understand the implications of nibbana in the present life, it is necessary to know something of the way in which fire is described in the Pali Canon. There, fire is said to be caused by the excitation or agitation of the heat property. To continue burning, it must have sustenance (upadana). Its relationship to its sustenance is one of clinging, dependence, & entrapment. When it goes out, the heat property is no longer agitated, and the fire is said to be freed. Thus the metaphor of nibbana in this case would have implications of calming together with release from dependencies, attachments, & bondage. This in turn suggests that of all the attempts to describe the etymology of the word nibbana, the closest is the one Buddhaghosa proposed in The Path of Purification: Un- (nir) + binding (vana): Unbinding.

To understand further what is meant by the unbinding of the mind, it is also important to know that the word upadana--the sustenance for the fire--also means clinging, and that according to the Buddha the mind has four forms of clinging that keep it in bondage: clinging to sensuality, to views, to precepts & practices, and to doctrines of the self. In each case, the clinging is the passion & desire the mind

feels for these things. To overcome this clinging, then, the mind must see not only the drawbacks of these four objects of clinging, but, more importantly, the drawbacks of the act of passion & desire itself.

The mind does this by following a threefold training: virtue, concentration & discernment. Virtue provides the joy & freedom from remorse that are essential for concentration. Concentration provides an internal basis of pleasure, rapture, equanimity, & singleness of mind that are not dependent on sensual objects, so that discernment can have the strength to cut through the mind's clingings. Discernment functions by viewing these clingings as part of a causal chain: seeing their origin, their passing away, their allure, the drawbacks of their results, &, finally, emancipation from them.

Although the Canon reports cases where individuals cut through all four forms of clinging at the same time, the more common pattern is for discernment first to cut through sensual clinging by focusing on the inconstancy & stressfulness of all sensory objects and on the worthlessness of any passion or desire directed to them. Thus freed, the mind can turn its discernment inward in a similar way to cut through its clinging to the practice of concentration itself, as well as to views in general and notions of 'self' in particular. Once it no longer views experience in terms of self, the entire self/not-self dichotomy collapses.

The mind at this point attains Deathlessness, although there is no sense of 'I' in the attainment. There is simply the realization, 'There is this.' From this point onward the mind experiences mental & physical phenomena with a sense of being dissociated from them. One simile for this state is that of a hide removed from the carcass of a cow: Even if the hide is then placed back on the cow, one cannot say that it is attached as before, because the connective tissues that once held the hide to the carcass--in other words, passion & desire--have all been cut (by the knife of discernment). The person who has attained the goal--called a Tathagata in some contexts, an arahant in others--thus lives out the remainder of his/her life in the world, but independent of it.

Death as experienced by a Tathagata is described simply as, 'All this, no longer being relished, grows cold right here.' All attempts to describe the experience of nibbana or the state of the Tathagata after death--as existing, not existing, both, or neither--are refuted by the Buddha. To explain his point, he again makes use of the metaphor of the extinguished fire, although here he draws on the Vedic view of latent fire as modified by Buddhist notions of what does and does not lie within the realm of valid description.

To describe the state of the Tathagata's mind, there has to be a way of knowing what his/her consciousness is dependent on. Here we must remember that, according to the texts, a meditator may develop intuitive powers through the practice of concentration enabling him/her to know the state of another person's mind, or the destination of that person after death. To do so, though, that person's consciousness must be dwelling on a particular object, for it is only through knowledge of the object that the state of the mind can be known. With ordinary people this is no problem, for ordinary consciousness is always dependent on one object or another, but with Tathagatas this is impossible, for their consciousness is totally independent. Because terms such as existing, not existing, both, or neither, apply only to what may be measured against a criterion of knowing, they cannot apply to the Tathagata.

The Buddha borrows two points from the Vedic notion of fire to illustrate this point. Even if one wants to assume that fire still exists after being extinguished, it is (1) so subtle that it cannot be perceived, and (2) so diffuse that it cannot be said to go to any one place or in any particular direction. Just as notions of going east, west, north, or south do not apply to an extinguished fire, notions of existing and so forth do not apply to the Tathagata after death.

As for the question of how nibbana is experienced after death, the Buddha says that there is no limit in that experience by which it could be described. The word 'limit' here is the important one. In one of the ancient Vedic myths of creation, the universe starts when a limit appears that separates male from female, sky from earth. Thus

the implication of the Buddha's statement is that the experience of nibbana is so free from even the most basic notions that make up the universe that it lies beyond description. This implication is borne out by other passages stating that there is nothing in that experience of the known universe--earth, water, wind, fire, sun, moon, darkness, coming, going, or stasis--at all.

Thus, when viewed in light of the way the Pali Canon describes the workings of fire and uses fire imagery to describe the workings of the mind, it is clear that the word nibbana is primarily meant to convey notions of freedom: freedom in the present life from agitation, dependency, & clinging; and freedom after death from even the most basic concepts or limitations--such as existence, non-existence, both, or neither--that make up the describable universe.

Here, Hemaka,
with regard to pleasant things
    seen, heard, felt, & cognized,
There is: the dispelling of passion & desire,
        the deathless state of Unbinding.
Those who, knowing this, mindful,
    fully extinguished/unbound
    in the here & now,
are forever calmed
have gone beyond
    entanglement in the world.

Sn v.9

Freed, dissociated, & released from ten things, the Tathagata dwells with unrestricted awareness, Vahuna. What ten? Freed, dissociated, & released from form...feeling...perception...processes...consciousness... birth...ageing...death... stress*... defilement, he dwells

with unrestricted awareness. Just as a red, blue, or white lotus born in the water and growing in the water, rises up above the water and stands with no water adhering to it, in the same way the Tathagata--freed, dissociated, & released from these ten things--dwells with unrestricted awareness.

A x.81

Just as the great ocean has but one taste, the taste of salt, even so does this doctrine & discipline have but one taste: the taste of release.

A viii.19

ÉÍÍÍ

Australia and Queensland in Particular" (2), that a group of Sri Lankans arrived in Mackay, Queensland, on board the ship, "Devonshire", on November 16th, 1882. There is evidence that many of these early migrants were Buddhists, but as de Jong noted:

'Pressure from the Christian establishment of the day must have been strong. Within twenty years after their arrival, most if not all those that were still alive had been converted. If some older folk remained Buddhists at heart, their children apparently did not.'

At least one family did not succumb to such pressures - that of the Mendis family, who are currently one of Brisbane's leading jewellers and have incorporated the distribution of Buddhist literature as part of their business. The Mendis family established the Brisbane Buddhist Vihara and currently supported its resident monk, the Venerable Shanti Bhadra.

Six years prior to the arrival of the Sri Lankans in Mackay, there was a Buddhist temple on Thursday Island, the northernmost tip of Australia. Klaas de Jong reports that some five hundred Sri Lankans were involved. They were engaged in the pearl trade and they erected a small temple and planted a Bodhi tree. Although remnants of this temple are reputed to have been incorporated into the present post office, the Bodhi tree, apparently, is still thriving.

In the book, "Path to Righteousness" (3), a collection of a series of articles by Anagarika Dhammapala, originally published in the Maha-Bodhi Journal' between 1892 and 1900, it is reported that a Dr.Worthington formed a group called "Students of Truth" which regarded themselves as 'Christian Buddhists'. This group, apparently, had branches on mainland Australia as well as Tasmania and even extending to New Zealand. At that

time, there was much hostility from the Christian churches to any favourable mention of Buddhism, let alone its practise. In 1897, a Victorian newspaper, 'The Healsville Guardian' published an article in defence of Buddhism, which resulted in a threatened boycott of the paper by several Christian ministers. Also in the 1880's, a South Australian newspaper published a long and, reportedly, interesting article on Buddhism which was later reprinted in the New South Wales rural newspaper, 'The Albury Banner'. This article invited the wrath of a Wesleyan minister and much published debate ensued. Anagarika Dhammapala further relates an insulting, unfair and distorted article appearing in a fortnightly Baptist periodical which, he claims, was "full of gross misrepresentations, evidently written out of vindictive malice." A politely worded reply to the editor, pointing out the errors in the article was, not surprisingly, never published. The earliest documented visits to Australia of members of the Sangha has recently been unearthed by Paul Croucher. He reports that Venerable U Sasana Dhaja, an English monk, ordained in Burma, toured Australia in 1910. It was not the first time that I had encountered his name. A few years ago, whilst on a visit to the home of the Founding President of the Buddhist Society of New South Wales, Leo Berkeley, I was shown a Buddha image which was reputedly more than four hundred years old. Mr.Berkeley said that a lady, not a member of the Buddhist Society, had asked him to accept it from her, as she claimed that, whilst it was in her possession, it had brought her bad luck. Had she been familiar with the teachings of the Buddha, perhaps she may have realised that the 'bad luck' was more likely due to her Karma vipaka than to any inherent properties of the image itself. However, accompanying the image was a yellowed document which stated that the image was brought to Australia by 'Venerable U Sasana Dhaja, monk of the order of the yellow robe from Le-Gyun-Man-Lung Monastery Pagoda, Thantabar, Sagaing

Hills, Upper Burma.' Apparently, this Venerable U Sasana Dhaja was somewhat of a shady character. He was one of the first Englishmen to take the robe, but, apparently, was still a Christian at heart. Paul quotes some of his utterances which were reported in the newspapers of that time as: "Buddhism is a system of mental development just as a gymnasium is a system of physical development" consequently "a man can be a Christian and yet live the life of a Buddhist monk as naturally as a man can be a student and a gymnast simultaneously." On another occasion he stated that although the Buddha was the Light of Asia, Christ was still the Light of the World.
He supported himself during his tour by selling, apparently, an unlimited number of supposedly 700 year old alabaster Buddha images. It is one of these images which is currently in the possession of Leo Berkeley. Despite its doubtful authenticity, it is, indeed, a very beautiful image.

In 1915, five Buddhist monks of German origin arrived in Sydney. They were part of a consignment of foreign internees sent from Sri Lanka for imprisonment in Australia. As most readers would know, England and its colonies were at war with Germany at that time. One of these monks was a former world famous violinist, Anton Gueth, who as Venerable Nyanatiloka, was one of the greatest pioneers of western Buddhism. His student, another German monk, Nyanaponika, together with his master, Nyanatiloka, have passed on to us, a wealth of learned books on the Dharma.

It was during the 1940's in Sydney, whilst studying books on non-Christian religions, that Marie Byles became intensely interested in Buddhism, and no account of its development would be complete if her contribution were ignored. Marie Beuzeville Byles was born in 1900 into a Christian family in England. At the age of eleven years, she migrated with her family to Australia. She

was one of the first women to graduate as a solicitor from the University of Sydney and, certainly the first to set up practice after graduation. The 'Sydney Morning Herald', of November 24th, 1979, in her obituary observed that:

'She became a legendary figure, winning achievement as mountaineer, explorer and author.'

She wrote at least six books, four of which were on Buddhist topics. 'World Buddhism', vol.5, No.1, 1956, a publication of the World Fellowship of Buddhists, reports: 'Miss Marie Byles, who spent a short holiday and study tour in Ceylon after a trip to the Himalayas for meditation purposes, is now writing a book on "The Human Aspect of the Buddha's Life" for publication shortly.'

She spent the year 1954 in North India researching this book which was eventually published under the title of "Footprints of Gautama the Buddha". Marie gave many talks to the Theosophical Society in Sydney, as well as broadcasting on their regular Sunday night programme on Radio Station, 2GB. She also preached Dhamma at the Unitarian Church in Sydney. Marie disliked participation in organised groups, preferring to study and meditate in a hut in the garden of her Cheltenham (a Sydney suburb) home. She was a pacifist, naming her home 'Ahimsa' and the meditation hut, 'The Hut of Happy Omen'. Since her death, the home and garden have been given to the people of Sydney as a quiet retreat. It is currently administered by the National Trust.

Leo Berkeley, a Dutchman by birth, who had spent the war years in England, later migrated, with his family, to Australia. Early in 1952, whilst on a ship returning to England for a visit, he met Sir Lalita Rajapakse, the then Sri Lankan Minister of Justice. Sir Lalita was

returning to Colombo after attending a Commonwealth Conference in New Zealand. The two became acquainted and, as Sir Lalita was a very devout Buddhist, it seemed inevitable that their daily conversation would turn to Buddhism. Sir Lalita recited to Leo the Dhammapada verse:

"By ourselves is evil done; by ourselves we pain endure.
By ourselves we cease from ill; by ourselves become we pure.

No one can save us but ourselves, no one can and no one may.

We ourselves must walk the Path, Buddhas only point the way."

Which caused Leo Berkeley to observe:
I was very much impressed by this wisdom because I always had believed that we ourselves create our life and our destiny. I said: "Sir, please tell me a little more about the Teaching of the Buddha" .His answer was: "My good friend, I'd like you to meet a learned monk. Come and see me tomorrow when we arrive in Colombo". The learned monk turned out to be the late Venerable Narada Maha Thera from the Vajirarama Vihara in Colombo. Venerable Narada instructed Leo Berkeley in the Dhamma. Fortunate, indeed, was he to have such a fine teacher. Narada was a prolific author of Buddhist books and pamphlets and had been a constant visitor to both South-East Asian and western countries, preaching the Dhamma until well beyond the age when most people would consider such pursuits too strenuous. Venerable Narada suggested to Leo Berkeley that, on his return to Australia, he should establish a Buddhist society. Leo Berkeley, after making some enquires, was put in touch with Marie Byles. He told her of his intention to form a Buddhist Association. "Oh, Mr.Berkeley", she said, "the

Australians are not yet ready for the teaching of the Buddha." Leo Berkeley replied: "Miss Byles, if you are ready and I am ready, we can start together an association." Hence the embryo Buddhist Society was born. Additional members were recruited following an advertisement placed in the "Sydney Morning Herald". It was not a formally constituted society, but a loosely formed group of people gathering together to study the Dhamma.

Soon after this group was formed, a seventy year old, American born, Buddhist nun, Dhammadinna, arrived in Sydney. She had been living in Sri Lanka for nearly thirty years. Her supporter in Sri Lanka was Lady de Silva, who had built the 'Forest Hermitage' for her. This same 'Forest Hermitage' was later to become the dwelling of a famous German monk and prolific author, mentioned earlier, Venerable Nyanaponika. Sister Dhammadinna arrived in Australia in 1952, with little money and only one address of a person to contact. She arrived at the home of her contact, Marie Byles, requesting shelter. Marie, who was somewhat of a literalist when interpreting the Vinaya, offered Sister 'The Hut of Happy Omen', which was an unlined wooden structure, open to the elements. She gave Sister a couple of blankets and informed her that she could sleep on the floor. Apart from her advanced age, Sister was partially crippled due to a previous fall which necessitated her wearing a back brace. She suffered much pain. Although the 'Omen' may have been happy, Sister Dhammadinna was less than happy with her accommodation. Despite this, Eric Penrose, who was one of Sister's most devoted students and supporters observed: The one who was really marvellous to her when she arrived was the lady solicitor, Marie Byles. She must have great credit in giving Sister Dhammadinna a place to live. It was Leo Berkeley, however, who came to her rescue and installed her in an apartment at Bellevue Hill (a Sydney eastern

suburb), for which he met all expenses. Sister Dhammadinna was well able to look after herself in her new residence. She was strictly vegetarian and insisted that her students followed suit. The kitchen was shared by other tenants, who, incidentally were all female. She attempted to dissuade her fellow tenants from their carnivorous habits by remarking, as she passed the kitchen, whilst they were preparing the Sunday roast lamb, "Do I smell a corpse incinerating in here?". On Sunday evenings, she conducted Dhamma talks and meditation in the home of Mr. and Mrs. Leo Berkeley. Usually fifteen to twenty people attended these lectures. She did not accept all of those who attended these meetings for personal instruction. She chose eight persons whom she considered were 'ready for the Dhamma'. She refereed to them as "my Buddhists". The author was fortunate in being one of those eight. She administered the Three Refuges and eight precepts to this group on the Holy Day of Vesak, 29th of May, 1953. Sister Dhammadinna's visa expired during 1953. Eric Penrose pleaded, on behalf of her students, that the then Minister for Immigration in the Menzies Government, Sir Howard Beale, grant her an extension. Eric observed: He was not overflowing in his desire to do something. But, eventually, an extension was forthcoming. However, Sister left later that year for a short visit to the United States and thence to Hawaii where she was to spend the following five years.

It was in May, 1953, that the Buddhist Society of New South Wales was formally constituted as a society. Prior to that time, as I have already observed, the group meeting at the Berkeley's home had no particular name or structure. A committee was formed and Leo Berkeley was unanimously elected as President. The Vice-President was Norman Weekes, Graeme Lyall was Secretary and Don Ashfordye was Assistant Secretary. I am uncertain who the Treasurer was, but it was either Geoff Martin or

Colin Jones. Leo Berkeley had two frock retailing businesses at the time. The top floor of his shop in Oxford Street, Sydney, became the first office of the Buddhist Society of N.S.W.. Don Ashfordye and I would attend the office every Saturday morning, answering correspondence and assisting Leo Berkeley with the layout of the Society's publication, "The Buddhist News", of which he was the editor. It was offset printed on glossy paper and it included photographs as well as Dhamma articles and news. The entire cost of its production was borne by Leo Berkeley. The Society quickly grew too large to be accommodated any longer at the Berkeley's home, so the Centre Club in George Street, Sydney became the regular venue for Sister Dhammadinna's talks. It was during meetings at this venue that Natasha Jackson, who was later to play a significant role in the newly formed Buddhist Society, first made an appearance.

The following year heralded the arrival of a saintly meditation master from Burma, Venerable Sayadaw U Thittila. The Society was, indeed, most fortunate to welcome as its first visiting Bhikkhu such a gentle man, well versed in the Dhamma and who enjoyed an international reputation. Venerable U Thittila gave several public lectures which were the first step in dispelling the many misconceptions, concerning the Buddha's teaching, plaguing Australian Society.

On Tuesday, February the 1st, 1955, to a fanfare of newspaper publicity, arrived the legendary Venerable Narada Maha Thera. The 'Sydney Sun', next evening, featured a photograph of Venerable Narada, with his umbrella raised, under the caption "Cool Customer". That the Sydney press was unused to the appearance of Buddhist monks in that city is evident from the accompanying article which commenced: Bald, bespectacled and smiling and wearing a heavy orange robe, Narada Maha

Thera said "I am here to explain Buddha's teachings to those interested." The priest is in Sydney at the invitation of the Buddhist Society of N.S.W. which plans to build a temple.

On the morning of his arrival, Leo Berkeley was quoted in the 'Sydney Morning Herald' as saying:
The Society, which consists mainly of Australian nationals, is growing rapidly, and we are anxious to have a temple.; Bhikkhu Narada has told us he has been promised funds from wealthy tea merchants in Ceylon which; might be used to establish one, and he will put certain propositions before us.. The merchants feel they want to put back into Australia what they have taken out of it. It seemed to me that it was somewhat ironical to suggest that these Sri Lankan tea merchants felt guilty at their 'exploitation' of the poor, thirsty, Australian tea drinker and, by this gesture, were hoping to make amends. However, Venerable Narada was, indeed, accompanied by a wealthy Sri Lankan tea merchant in the person of Tilak Ratnayake. Tilak had come to Australia to investigate the possibility of commencing tea production in Queensland. As a devout Buddhist and old boy of Mahinda College, which was established by the Buddhist Theosophical Society of Galle, in Sri Lanka, he paid the fare of Venerable Narada so that the more valuable seeds of the Dhamma could be planted on Australian soil. His headmaster at Mahinda College was Frank Lee Woodward, who although born in England, retired in 1919 to an apple orchard in Tasmania. Woodward was a Pali scholar and translator, his most famous book being "Some Sayings of the Buddha". Tilak brought, with him, a large chest of tea from his plantation and each visitor to Venerable Narada received a gift of pure Ceylon tea. Venerable Narada also brought saplings from the sacred Bodhi tree in Sri Lanka, which had arrived there with Sister Sanghamitta, daughter of Dharmasoka, around 300 B.C.. The 'Daily Telegraph' of

February 2nd, 1955, reported:
BUDDHA'S TREE IN TROUBLE.
Narada Maha Thera struck quarantine trouble when he arrived in Sydney yesterday. He had with him three seedlings from a tree under which, he said, Buddha sat more than 2,000 years ago. They were thriving in cigarette tins. Narada had tended and watered them each day on the voyage from Ceylon. When he came ashore from the liner 'Australia', quarantine officials took them from him.

They were kept in quarantine for over a year and one was eventually planted in the garden of the Berkeley home. Venerable Narada's lectures were well publicised in the press and thus attracted large and curious audiences. Even the printed media found these lectures newsworthy, for the 'Daily Telegraph' of the 14th of February featured an article headed "Monk's Hints on Meditation".

Here are a few extracts:
A Buddhist monk last night gave an audience of 500 people hints on meditation. The monk is Bhikkhu Narada Maha Thera. --- The Bhikkhu opened and closed his lecture with a short sing-song recitation. He said he had called his lecture "Mental Culture", although it was about meditation. Some people confused meditation with levitation or visions. The mind could be purified and controlled by meditation.

Venerable Narada also visited Queensland, Victoria and Tasmania, where he established Buddhist Societies. The founding president of the Buddhist Society of Tasmania was Ken Wriedt who was later to become a Senator and is currently leader of the Labor Party in Tasmania. He is still practising Buddhism, starting each day with a period of meditation.

According to Klaas de Jong, Brisbane had a similar

enthusiastic, if sensational, press coverage to Narada's visit as Sydney. Some of Brisbane's newspaper headlines were:

"Monk Tells of Buddha", "Buddhist Monk Kept Distance" (from a female reporter) and "Monk Sees Likely Buddhas".

Venerable Narada was a kindly monk who was well versed in the Dhamma. He was an eloquent exponent of the Buddha's message and had captivated audiences everywhere he went. He passed away, after a long period of illness, on October the 2nd, 1983, aged 86 years. I received a letter from him, written from Saigon, Vietnam on the 30th of October, 1970, which says:

I left Ceylon on April 30th on a missionary tour in Indonesia. On 15th June I arrived in Vietnam and unexpectedly fell ill. On July 1st I was hospitalised, suffering from a serious illness. My situation was so grave that even cremation arrangements had also been made. My recovery, they say, is a miracle. I am really grateful to the Vietnamese Buddhists for saving my life. Fortunately, he was able to serve the Buddhist world for another 13 years. He is sadly missed, not only by those who knew, loved and respected him in Australia, but his loss is felt throughout the Buddhist world, both East and West. May he soon attain the bliss of Nirvana.

In 1955, the name of the Buddhist Society of N.S.W.'s journal was changed to "Metta". Towards the end of 1955, the Society's dream of land for a Vihara was realised. Together with substantial monetary donations from Leo Berkeley and Eric Penrose, as well as financial offerings from donors in the South East Asian Buddhist countries, four and a half acres of land was purchased at West Pennant Hills, an outlying suburb of Sydney. Marie Byles discovered this parcel of land in natural bushland at the reasonable price of a few hundred pounds

and she urged the Society to secure it. Marie handled all of the legal aspects of its acquisition, at no cost to the Society and a group of trustees was appointed. It was not until 1956 that the land was dedicated, by two visiting monks from Thailand, as the site for the first Buddhist Vihara and Meditation Centre in Australia.

In October, 1955, the Buddhist Society of N.S.W. promoted an Indian dance drama to raise funds for the United Nation's Appeal for Children. It was an ambitious presentation which ran for three performances in the hall of the N.S.W. State Conservatorium of Music.

It was in February 1956, Buddha Jayanti Year, that two monks arrived from Thailand. One was an abbot of a monastery in Thailand, Phra Dhammadiraja Muni, who spoke little English and his companion was an American, Phra Sumangalo. Phra Sumangalo, who was on his first visit to Australia, was no stranger to us, however. He was the author of many articles and his activities were regularly reported in the Buddhist magazines at that time. He was not known as Phra Sumangalo, however, but as Reverend Robert Stuart Clifton, Superior General of the Western Buddhist Order (Soto Zen). This organisation was in no way connected with the current organisation of the same name founded by the English monk, Maha Sthavira Sangharakshita. Phra Sumangalo was a charismatic figure and it was during his visit, at my suggestion, that the Young Buddhist Association was formed. It was under the umbrella of the Buddhist Society of N.S.W. and its aim was to engender an interest in the Dhamma amongst the younger members of the Society. It was short-lived, however. Unfortunately, during the visit of these two monks, a crisis occurred. Unknown to Abbot Dhammadiraja Muni, Phra Sumangalo, in his role of Rev. Robert Stuart Clifton, Superior General of the Western Buddhist Order, was privately ordaining his followers, both male and female, as priests in his 'Order'. Two members of the

Buddhist Society of N.S.W., Gordon and Joy Lishman, who had been his followers for many years, were both ordained during this visit. He performed similar ordination ceremonies in Melbourne and Canberra. These extra-Theravadin activities were soon to come to the notice of his Abbot and so his tour of Australia came to an abrupt termination. He and the Abbot returned hurriedly to Thailand where, no doubt, Rev.Robert Stuart Clifton, alias Phra Sumangalo, faced the music. Several years later, he visited Malaysia where he founded the Young Buddhist Association of Malaysia. He passed away in 1962.

May of 1956 saw the welcome return of Venerable Sayadaw U Thittila. The highlight of this visit was his conducting of a three week meditation retreat at the home of the Berkeleys, who were then living in the Sydney suburb of Belrose. Thirty five people participated in this retreat. The Sayadaw also inspected the newly acquired Vihara and Meditation Centre site which had, earlier in the year, been dedicated by the two monks from Thailand. He was full of enthusiasm for it. 'World Buddhism', for August 1956, reported him as commenting:

When the Centre is established, we hope to have a permanent Bhikkhu in the Vihara. He will come: from one of the Buddhist countries and he may even be an Australian. Appointment of a permanent Bhikkhu will provide Australia with a worthy Buddhist centre and further help the growth of Buddhist teaching.

Sadly, this was the last visit of a Bhikkhu, for teaching purposes, for some years. At that time, although there were many learned monks in the Buddhist countries, very few spoke English. Those few that did, such as Venerable Narada and Sayadaw U Thittila, were in great demand in the awakening western countries and were

forced to limit their occasional visits to a few weeks duration. This lack of the stabilising influence of the Sangha resulted in squabbles and disagreements within the Buddhist Societies in Australia. The Buddhist Society of N.S.W. split in 1956. Leo Berkeley's pioneering leadership was replaced by that of Charles Knight and Natasha Jackson. There were now two groups functioning in Sydney - the Buddhist Society of N.S.W. under its new leadership and what was loosely called 'the Buddhist Group', consisting mainly of the pioneers who had studied under Sister Dhammadinna. Hearing of the schism, Venerable Narada returned to Australia to plead with the two groups to sort out their differences and to re-unite. A meeting of both groups was called by him at the home of the Berkeleys. He warned that, as Buddhism was relatively new to Australia and had, as yet, few adherents, we could not afford the luxury of schisms. His pleas, however, fell on deaf ears - neither group would give way.

Late in 1957, whilst on a visit to Hawaii, Eric and Lynne Penrose invited Sister Dhammadinna to return to Australia. She accepted and returned in 1958, to be housed in a lodge, which the Penroses had constructed for her as an annexe to their Bilgola home. She stayed for almost a year before returning to Hawaii, where she passed away in 1967. Eric Penrose, in a tribute to her, said:

Thank heavens we had the experience of Sister Dhammadinna. The studies and the absolute simplicity of it and the strength of what Sister Dhammadinna had to say was so powerful. To me, it was just so absolute that I could never find argument with it. I hope she made it. That would be my greatest hope because what she gave was limitless.

In 1959, the Buddhist Society of N.S.W. combined with

the Buddhist Society of Victoria to form the Buddhist Federation of Australia. Charles Knight was its first Chairman. The Buddhist Society of N.S.W.'s journal, 'Metta', was later to become the national journal of the Federation.

'Karuna', of February, 1981, published by the Buddhist Society of N.S.W., reported that:
Early in the sixties, the Society received an offer for its land at Pennant Hills. As the alternative to selling was to pay enormous rates on the property, which had now been re-zoned by the Council, the members authorised Charles Knight to conduct the sale.

Some of the pioneer members, who had previously severed their connection with the Society, were outraged that the Society had chosen to sell land that had been dedicated by members of the Sangha as the site for a Vihara and Meditation Centre. However, two of the original trustees, Leo Berkeley and Eric Penrose, decided that the decision of the leadership should not be opposed. Eric Penrose commented:

The Buddhist Society did very well out of it. It gave them the chance to be established. So the good fortune was there that these things happened. That's the way it should be.

During the sixties, the majority of the fortnightly meetings of the Buddhist Society of N.S.W. consisted of lectures by Charles Knight and Natasha Jackson and a sizeable library was built up over this period. Speaking of the void due to Australia's not having resident representatives of the Sangha, Natasha Jackson observed:
Knight, himself, made several impassioned pleas for such leaders, and yet the Sangha did not respond positively for eighteen years. Buddhism in the West is almost exclusively a lay movement. The pioneer element in the

Sangha has long since become defunct. There were two major factors which probably inhibited the appointment of a resident monk at that time. As previously mentioned, it was not only a case of finding a monk well versed in the Dhamma who was prepared to be a 'pioneer', but the main difficulty was that few learned monks spoke English sufficiently well to undertake such missionary activity. Another factor, and by no means a minor one, is that, according to the Vinaya rules, a monk cannot stay for an extended period in the home of a lay-follower. The establishment of a Vihara to house the monk should have been one of the Society's first priorities, had they been serious about attracting a resident teacher. The land was acquired in the 1950's for that purpose, but the Society chose to dispose of it.

In November, 1960, a lineage holder in the Chinese Cha'an tradition arrived in Sydney, where he stayed until the end of 1961. He was the famous Master Hsuan Hua. He gained the impression that there were no Buddhists among the local Chinese community as he was largely ignored and, was, at one stage on the verge of starvation due to the lack of support. At the end of 1961, he left for California, where, with the support of many followers he established a monastic centre known as the 'City of Ten Thousand Buddhas'.

At a meeting of the Buddhist Society of N.S.W. in 1970, which I attended, discussion turned to the need for a resident Bhikkhu to oversee the Society's activities. The objection was raised, by Charles Knight, that it was impossible to house such a Bhikkhu. I suggested that I knew of a Roman Catholic family at Brighton-le-Sands who, perhaps, may be prepared to offer a Bhikkhu some suitable accommodation. Charles Knight and Natasha Jackson expressed an interest and so were introduced to the MacLaughlin family to formulate the arrangements. A

monk's annexe in their garden was prepared which, although small, was relatively comfortable.

On the 9th of May, 1971, Venerable Ratmalane Somaloka arrived in Sydney to become the first resident monk. His devotees and supporters in Malacca had paid his fare and expenses to enable him to undertake this mission to Australia. Knight and Jackson tended to be somewhat undiplomatic in their dealings with the MacLaughlin family and a tense relationship developed. The tension between them became so untenable that a Chinese businessman, Bill Jong, who was quite inspired by Venerable Somaloka's teaching, leased a spacious apartment at Rose Bay, an eastern suburb of Sydney, to house the resident Bhikkhu. Elva Miksevicious, then a keen supporter of Venerable Somaloka, writing in a special edition of 'Metta' (1974) reported that:
The Buddhist Society of N.S.W. contributed ten dollars a week from their funds towards the heavy expenses undertaken freely and happily by Mr. Jong. The Ven. Somaloka instructed him to accept this offer for them to share in this meritorious deed until the end of the year.

After working with the Buddhist Society of N.S.W. for twelve months, Venerable Somaloka formed the opinion that the Society had become a group more interested in engaging in armchair discussion than in practising Buddhism as a way of life. The executive of the Buddhist Society and their monk had an uneasy relationship. Prior to the Bhikkhu's moving to Rose Bay, Ven. Somaloka felt that his time was not being used as profitably as it might have been. Venerable Somaloka stressed to the Buddhist Society of N.S.W. that, if Buddhism were to make any progress and a monk were to remain in Sydney, that it would be necessary for them to make moves towards establishing a Vihara. The Society had the funds as the money from the sale of the West Pennant Hills

property had yielded a healthy profit which Charles Knight had successfully invested in the share market. Their leaders, however, were not prepared to use this money for a Vihara. Being resident in the Maclaughlin's private home, access to him was necessarily restricted. This situation changed, however, once he was established in the Rose Bay apartment. Elva Miksevicious continued:
The Ven. Somaloka then started his religious activities, which were conducted over many hours each day. He talked to people who came to see him from all over Australia, he taught, he instructed, he preached, he conducted services and gave himself to his work and those who were in need of him. Naturally, he met hundreds of people of all ages and walks of life.

Bill Jong selflessly devoted himself to the needs of Venerable Somaloka. He visited the apartment each day to prepare the monk's food and to drive him in his car to his various appointments. The Buddhists who benefited from Ven. Somaloka's instruction will be forever grateful to the great contribution offered by Bill Jong.
A few of those people who had gathered around Venerable Somaloka at Rose Bay resolved to find a way to establish a Vihara. Two people, who were staunch supporters of the Buddhist Society of N.S.W. prior to the 1956 split, Jurgis and Elva Miksevicious, had become actively involved in the activities at Rose Bay. The Buddhist Society of N.S.W., at that time, had no interest whatever in the devotional side of Buddhism. Natasha Jackson, referring to earlier Pujas conducted by the Society, wrote:

Strangers who wandered into our meetings saw obeisance to an image, heard, what was to them, a meaningless chanting in some strange language, and left either amused or mystified, but certainly not edified.

By 1972, the activities, formerly conducted at Rose Bay,

were transferred to Annandale, an inner Sydney suburb. A devotional service followed by Dhamma teaching and meditation became a regular Sunday morning activity. Far from being 'amused or mystified', a group of fifteen to twenty people were regularly in attendance.

On Vesak Day, 1973, the Australian Buddhist Vihara was opened at Katoomba, in the Blue Mountains, west of Sydney. The dream of Venerable Somaloka and his devotees was finally realised. R.L.Henderson, in an Editorial in 'Metta', concluded:

Many of us feel that the Ven. Somaloka is an ideal person to start off the first fully Buddhist Vihara in this country. He has demonstrated flexibility of mind and the ability to fit into Australian conditions and way of life in a commonsense manner. Despite the bouquets and optimism which greeted the founding of Australia's first Buddhist Vihara, since then, all has not been a bed of roses. A sign on the gate of the Vihara, "Private Property", is a significant indicator of its policies. Despite the Sri Lankan origins of Venerable Somaloka, the local Sri Lankan Buddhist community was discouraged from visiting the Vihara. It was only after the arrival of Venerable Pemananda, who was invited to assist in the activities of the Vihara for a three year period, that the Sri Lankan community was granted limited access. The Bhikkhu who followed Ven. Pemananda's stay, Ven. Sugananda, was most unimpressed with the exclusiveness of the Vihara's policies and threatened to leave unless visitors were granted freer access. Some Blue Mountain's residents who wished to study the Dhamma and practice meditation claim that they were actively discouraged from attending the Vihara. Many of the original supporters have since withdrawn from its activities due in no small degree to Somaloka's alleged breach of a major Vinaya rule.

At the end of 1972, the Buddhist Society of N.S.W. purchased a villa unit at Eastlakes, a Sydney suburb, to serve as a permanent meeting place.

On January 23rd, 1972, Eric Liao, a Chinese businessman, formed the Chinese Buddhist Society of Australia. Initially, he invited Venerable Somaloka to conduct services in a garage adjacent to his home. With the assistance of Bill Jong, he acquired more central and suitable premises in Dixon Street, in Sydney's Chinatown district. This newly established temple in Dixon Street was later named "Prajna Temple". A tragic fire destroyed the premises on November 14th, 1985. All that remained after the fire was the statues of Sakyamuni Buddha, Kwan Yin, Ksitigarbha Bodhisattva and approximately one thousand books, including the Tripitaka. The abbot of the temple, Ven. Sik Chee Ming, and his supporters re-established the temple at Hornsby, a northern Sydney suburb. In 1989, premises in Dixon Street, vacated by the Chinese See Yup Society, were acquired and the central Chinese community, again, has a place of worship.

The form of Mahayana Buddhism followed by most Chinese and, indeed, the Vietnamese, is a fusion of Cha'an (Zen) and Pure Land (Messianic Buddhism). As Paul Croucher (1) observes:

The elemental Chinese religion is, of course, a kind of nature polytheism, onto which aspects of Confucianism, Taoism, and Buddhism have been grafted. The Chinese brought with them a syncretic blend of beliefs and practices in which the demarcations were ill-defined and the influence of Buddhism only mild. As in China, those who identified themselves with Buddhism probably amounted to no more than one per cent of the population. Most were content to wear 'a Confucian crown, a Taoist robe, and Buddhist sandals', and when pressed had some

difficulty in describing the religion they practised. Although a small number of the Chinese Buddhist community in Sydney is very devout, the greater number is quite pragmatic regarding religion and regard it as solely of use in rites of passage.

1973 heralded the arrival of two more monks from Thailand, in the persons of Venerable Chao Khun Pariattikavi and the well known teacher and author, Venerable Khantipalo. Initially, they conducted their activities from a rented bungalow in the Sydney suburb of Roseberry, but in 1975, a magnificent Victorian house, now known as Wat Buddharangsee, was purchased in the inner city suburb of Stanmore. The opening ceremony, on Vesak Day, 25th of May, 1975, was performed by His Royal Highness, Crown Prince Vajiralongkorn, in the presence of His Highness Ven. Somdet Phra Nyanasamvara and ten visiting Bhikkhus from Thailand. Wat Buddharangsee became the focal point for Theravadin Buddhism in Sydney, a function formerly performed by the Buddhist Society of N.S.W.. Wat Buddharangsee has proved to be one of the most popular Buddhist meeting places in the Sydney area. Such has been its success, that it has rapidly become too small to adequately serve its congregation so, a large tract of land was purchased at Leumeah, south of Sydney, where a traditional Thai-style Wat Pa Buddharangsee was opened in May, 1988. The Stanmore premises is being retained to serve the needs of the inner city Buddhist community.

In 1973, at the Buddhist Society of N.S.W.'s Eastlakes villa, a new style of meeting emerged. Under the guidance of Malcolm Pierce and his Japanese born wife Nara, who were resident there, the Society moved from its originally Theravadin format to incorporate the teachings of other traditions including those of the Japanese Nichiren Sect, Rissho Kosekai. Two years later, Natasha Jackson, unhappy with the new style "Dharma

Circle" meetings, resigned from the Society. Natasha Jackson, despite her, at times, abrasive manner, must be given due credit for keeping Buddhism alive in Sydney through its most difficult years. She had a fiercely independent and strong personality, uncompromisingly defended her views of how the Buddhist Society of N.S.W. should be run and was quick to condemn those with whom she disagreed. Had Sydney not had a Natasha Jackson, it is doubtful if the Buddhist Society of N.S.W. could, today, rightly claim to be the oldest and longest surviving Buddhist organisation in Australia.

1975 saw the birth of the Sydney Zen Centre. It is affiliated with the Diamond Sangha in Hawaii under the leadership of their teacher, Robert Aitken Roshi, who visits Australia regularly. They have purchased some land at St. Albans, north of Sydney, where a country Zendo is being established for meditation retreats. Although the chanting of sutras forms an essential part of the activities at the Zen Centre, the major emphasis is on meditation practise.

As the result of the purchase, in 1978, of 220 acres of land in the Dharug National Park, near Wiseman's Ferry, north of Sydney, Wat Buddha Dhamma came into being. It is a forest monastery with a supporting lay-village. Under the capable guidance of its resident abbot, Venerable Khantipalo, regular meditation retreats were conducted, not only for the benefit of the resident lay-community, but for the many city-dwellers who welcomed the opportunity to spend some time in a quiet natural bush setting. On the 20th of October, 1987, disaster struck the Wat. The Amenities Block was completely destroyed by fire. This block provided the mess and dormitory facilities for visitors and retreat participants. With the assistance of its many supporters, both resident and city dwelling, these facilities have been restored so that its regular

retreat and teaching programmes continue. A large new Sala (Meditation Hall) was opened in September, 1988, to accommodate the many people who attend the regular retreats. Phra Khantipalo, the founding abbot, disrobed in 1992 after being a Buddhist monk for thirty years. He has been replaced by a German born monk, Venerable Santitthito, who has been in Thailand for many years.

In 1979, after selling its Eastlakes villa, the Buddhist Society of N.S.W. purchased premises in Walker Street, North Sydney, from where it now operates. The Society acquired a large parcel of land at Katoomba, in the Blue Mountains, in 1982. This acquisition, which was made possible by a large financial donation from the Rissho Kosekai organisation in Japan, is being used as the Society's country retreat centre.

In the late '70's, Venerable Geshe Loden, a Gelugpa monk from Tibet, established centres for the practise and teaching of the Tibetan style of Buddhism in the Eastern States. His Sydney centre, the Loden Mahayana Centre, was started in Chippendale, an inner city suburb. This centre moved to its present location at Dulwich Hill in the early '80's. The Loden Mahayana Centre undertook the mammoth task, in 1982, of organising the Sydney visit of His Holiness, the Fourteenth Dalai Lama. The centre is currently known as the Tibetan Buddhist Society.

Venerable Tsang Hui arrived in Australia from Taiwan in 1977. In 1979, from a rented house in Redfern, an inner city suburb, he established the Hwa Tsang Monastery. Being a qualified school teacher as well as a Buddhist monk, he employed the 'skilful means' of attracting young people to the Monastery by conducting classes in academic subjects. The monastery later moved to Greenacre and then to its present location at Homebush West. In addition to conducting religious observances, the monastery continues to attract many high school

students to its daily classes in Buddhism, chemistry, Chinese language, English, general science, physics and mathematics. Due to these special classes, many of the students have gained places at Sydney's universities and later graduated to the professions. After overcoming much local opposition, the Hwa Tsang Monastery opened Sydney's first 'purpose built' Chinese Buddhist Temple at the Homebush site in 1993. After overcoming difficulties encountered with an unsympathetic local council and racist opposition from a few local residents, the Monastery building is now fully functioning. For a detailed account of the battle to establish this Monastery see my article 'Ethnic Buddhism in N.S.W.' (4).

As an outcome of many Buddhist students matriculating to the universities, joined by overseas students studying in Australia, university Buddhist societies were formed in the early eighties. The first student society was the University of New South Wales Buddhist Society, also known as UNIBUDS, which was founded, in 1981, with Venerable Tsang Hui's support. A year later, the Sydney University Buddhist Society was formed at Australia's oldest university, the University of Sydney. UNIBUDS has grown steadily since its inception and produces one of Australia's best produced Buddhist publications, 'Unibuds Annual Magazine'. The Sydney University Buddhist Society has struggled to survive in a university with, until recently, few overseas students, but with a renewed burst of enthusiasm, seems destined to become firmly established. In 1992, a Buddhist Society was established at Macquarie University.

A retreat held at Blackheath, in the Blue Mountains, in November, 1980, with a mere four people attending, heralded the modest beginning in New South Wales, of the Friends of the Western Buddhist Order. This Order was founded by the English monk, Ven. Sangharakshita, in

1967, with the idea of presenting the Buddha's teachings in Western terms, essentially, to people of European origin. Since then, centres and Buddhist community households have been established throughout the world. The first such household was established, in Australia, at Wollstoncraft, a northern Sydney suburb, in 1981. In 1984, the Friends of the Western Buddhist Order opened an inner city meeting and teaching place, the Sydney Buddhist Centre, near Central Railway, but moved to premises in King Street, Sydney in 1993.

As an outcome of the tragic war and Communist takeover in South-East Asia, many refugees from these Buddhist countries arrived in Australia, to re-establish their home and to seek religious freedom. At the end of 1979, a group of Vietnamese refugees met at a restaurant in Glebe, an inner city suburb, and formed the Vietnamese Buddhist Society of N.S.W. The first religious ceremonies organised by the Society were held at the Thai temple, Wat Buddharangsee, at Stanmore. Premises at Lakemba, a western suburb, were later leased by the Society, to serve as a temporary temple, prior to the arrival of their monk, Venerable Thich Bao Lac. Problems with the local council and racism from the local residents forced the Society to seek Government assistance to find a more suitable place and to establish a more permanent place of worship. Land at Bonnyrigg, an outer western suburb, was leased to the Society by the Housing Commission of N.S.W.. Today, on this land stands the first, purpose built, Buddhist temple in metropolitan Sydney, the Phap Bao Temple. A large statue of the Bodhisattva Kwan Yin forms a dominating landmark at the entrance to the temple.

Actually, the first Vietnamese monk to arrive in Australia was the senior teacher, Most Venerable Thich Phuoc Hue, who set foot on our soil in 1980. In 1981, he formed the Vietnamese Buddhist Federation of Australia,

which currently has branch temples in all Australian States with the exception of Tasmania, which has very few Vietnamese refugees. At its Biennial Conference in 1987, the name of the Federation was changed to the United Vietnamese Buddhist Congregations of Australia. He established the Phuoc Hue Temple in a large garage at the rear of a cottage in Fairfield, which served as a monk's residence. Again, racism and the local council's insensitivity to the needs of the refugee communities, forced the Vietnamese Buddhist Federation to seek Government assistance in finding a suitable place for a temple to serve the spiritual needs of Sydney's large Vietnamese Buddhist community. The then Premier of N.S.W., the Hon. Barrie Unsworth, responded by making available an unused school premises at Wetherill Park, an outer western suburb. The foundation stone for the new Phuoc Hue Temple was laid by him in October, 1987. The splendid temple premises, which is a major showpiece of Sydney, is currently situated on this former school land. The Vietnamese community is divided politically, hence the two temples. The Phap Bao Temple was established by Vietnamese who were in Australia, as students or diplomats prior to the 1975 fall of Saigon. The Phuoc Hue Temple serves the 'boat people', who view those, who didn't personally experience Communist oppression, with suspicion. They claim that many of the people from the Phap Bao Temple are not vigorous enough in their opposition to the current regime in Vietnam. Both temples support a youth movement called "The Young Buddhist Family" which is similar to and affiliated with the Boy Scout Movement.

Lao society is inseparable from Buddhism - they have been Buddhist for nearly a thousand years. 95% of the country are rice farmers and rural life revolved around the village Wat (temple) where the monk acted as teacher, doctor and spiritual adviser. Throughout the feudal and colonial periods, the Sangha the order of

monks - remained the main institution in the country. The monks were held in tremendous esteem as moral and spiritual arbiters as well as the most learned of the community.(5) In 1975, the Pathet Lao defeated the army of the royalist Buddhist monarchy and many Lao people fled from the communist tyranny across the Thai border. Many have since settled in Australia. The community divided into two factions - one supporting the former monarchy and the other, feeling dominated by the educated middle class, wishing to follow an independent path. In the mid eighties, the Lao refugees welcomed the arrival of their first monks to serve the spiritual needs of their community. The Lao Community Advancement Co-operative, the pro-monarchist group, purchased a two storeyed premises at Cabramatta West, known as Wat Prayort Keo Dhammananaram, to serve as a temporary residence for their monks and a meeting place for religious observances. They were later granted, by the N.S.W. Government, the lease on some land at Bonnyrigg for the purpose of, eventually, establishing a temple and community centre. The Foundation Stone Laying Ceremony was held on Sunday, 20th of August, 1989 and construction of the first stage, the monks' residence, was completed in 1990. The main temple building, in the traditional Lao style, is scheduled for completion in 1993. For many years the independent Lao Association of N.S.W., rented premises on the Hume Highway at Cabramatta as a temple and residence for the Abbot, Ven. Thongsoun Phantha-Oudom and their monks. The temple, known as Wat Buddhalavarn later became independent from the Lao Association and the Abbot was appointed as President. Early in 1988, a cottage was purchased to serve as a temporary Vihara (residence and temple) until land for a temple could be acquired. Moves were made in 1988 to unite the two Lao temples but, although the monks from both temples strongly supported it, suspicions about the motives for the merger still lingered amongst the laity, especially those from Wat

Buddhalavarn, and such a conjunction, unfortunately, now seems more remote than ever. The occasional combined ceremonies, that occurred before the attempted merger, have now completely ceased.

Resulting from the barbarism wrought on the Cambodian people by Pol Pot and his Khmer Rouge genocidal maniacs and the consequent invasion and occupation of Cambodia by the armed forces of the Peoples Republic of Vietnam, many refugees fled to the freedom of Thailand. These people, who, under the fanatical policies of the Khmer Rouge, were forced to labour for sixteen hours a day with little food, had lost all of their possessions.
Many of their relatives and friends, especially the educated, the professionals and the monks, had been slaughtered. They looked to the compassionate countries of the 'West' for resettlement so that they could resume what was left of their shattered lives. Australia accepted many of these industrious people and the various Governments provided some assistance in their resettlement. Buddhism is central to the lifestyle of the Khmer people and their fondest wish, after their arrival in Australia was to have a Buddhist monk to minister to their spiritual and social needs. Due to the genocide, very few monks survived to satisfy this need.
In the mid 1980's, the Venerable Long Sakkhone, a Cambodian Buddhist monk arrived to take up residence in Sydney. The community rented a rather run-down cottage in Fairfield, a Western suburb of Sydney, to serve as a temporary monk's residence and temple. The then Minister for Housing in the N.S.W. Government, the Hon. Frank Walker, later arranged for the lease of a tract of land adjacent to a large shopping Plaza at Bonnyrigg to the Khmer Community of N.S.W. for the purpose of constructing a community centre and temple. Construction of the first stage of this Cambodian centre, comprising a community hall, office and amenities block as well as a monk's residence has already been completed and was

officially opened by the Premier of N.S.W., the Hon. Nick Greiner on Saturday the 10th of February, 1990. The temple building, itself, being large, complex and expensive will have to wait for another day. The Khmer community is divided politically, with some people supporting Prince Norodom Sihanouk (FUNCINPEC), and others, the former Prime Minister, Son San (KPNLF), whilst a small number support the Vietnamese puppet' government of Hun Sen, however, they are united in their devotion to Theravadin Buddhism and, irrespective of how poor their circumstances in their new country, they generously support the temple and the religion generally. One would imagine that, in the light of the horrific experiences suffered by the Khmer community prior to their arrival in Australia, psychosis would be prevalent. Such is not the case, however. The Khmer people attribute this to their devotion to the teachings of the Buddha and are thus accepting of change, sorrow and their karmic circumstances.

Another religious group in the Bonnyrigg area is the Taoist, Confucian cum Buddhist plus traditional god worshiping lay organisation, the Australian-Chinese Buddhist Society. The membership of this organisation comprises mainly ethnic Chinese refugees from Indo-China. This temple is one of the few serving the Indo-Chinese community which is completely privately funded.

During the past 600 years, Buddhism has undergone turmoil in Korea. Cha'an (Zen) Buddhism was introduced from China in 372 A.D. and fused with the indigenous Shamanism. (6) The Choson kings, who ruled from 1392 until Japan annexed Korea in 1910, favoured Neo-Confucianism and ruthlessly suppressed Buddhism, forcing it out of the cities and towns and confining the temples to the remote mountains. During the Japanese occupation, Buddhism again gained favour but the

celibate monks were forced to marry. Following liberation in 1945, the main sect, Chogye, re-instituted celibacy for its clergy whilst several of the minor sects persisted with married priests. Following the Korean war, Korea came under American influence and an influx of Christian missionaries, especially of the aggressive fundamentalist variety, invaded Korea. What was formerly a Buddhist stronghold, now sees half of its population following Christianity. The results of this tumultuous period in Korean history has, to a significant degree, manifested itself amongst the Korean Buddhist migrants in Australia. Early in the 1980's, the Korean Dharmakaya Society was formed at Summer Hill, a western suburb of Sydney. In 1984, a monk, Venerable Jin Sang Sunim, arrived from Korea and premises were leased at Earlwood to serve as a residence and temporary temple, known originally as Hong Boep Sa and later renamed Dharma Sa. Venerable Jin Sang left Australia early in 1985 and was replaced by Venerable Jang San Sunim, who arrived on the first of April, 1985. An uneasy relationship developed between the monk and the Committee of the temple. By October, the dissent had become so untenable that the Venerable Jang San was forced to leave the temple, together with those members of the congregation who remained loyal to him. By December, 1985, a new Korean temple, Bul Kwang Sa, was established at Summer Hill with Venerable Jang San as its Abbot. His visa expired early in 1986 and he returned to Korea. After returning to Australia in January, 1988, as a permanent resident, he resumed his duties of ministry to the spiritual needs of the Korean community at the Bul Kwang Temple. The Committee of the Korean Dharmakaya Society later sponsored a Bhikshuni (female monk), Venerable Jung O Sunim, in October, 1986, to take over as resident spiritual teacher. Again, conflict arose between Jung O Sunim and the temple committee and she was dismissed in September, 1988. Many of her supporters severed their connection with the

Korean Dharmakaya Society and established yet another temple, Kwan Eum Sa, at Belmore, and later at Punchbowl, with Ven.Jung O Sunim as its presiding abbot. Yet another Bhikshuni, Venerable Ja Young Sunim, arrived in 1989 to serve the needs of the Korean Dharmakaya Society. The Society later vacated its Earlwood premises and established itself at Campsie, Sydney's main centre of Korean migrants. Meanwhile, trouble arose at the Bul Kwang Temple at Summer Hill. The President felt that, as he and the committee were meeting the expenses of the temple, the monks should confine their activities to performing ceremonies and all major decisions should be vested in the lay committee. The situation became so tense that Venerable Jang San formed the opinion that the temple was serving more as a Korean social club, providing a venue for Koreans to meet and discuss issues back home rather than as a centre for Buddhist practice. He felt that they had no real interest in practising Buddhism so he returned to Korea, leaving the Bul Kwang Temple without any monks to serve the congregation. In 1991, due to the efforts of Venerable Jah Young Sunim of Dharma Sa and Ki Hu Sunim, the newly installed abbot of Bulkwang Sa, a reconciliation and amalgamation occurred between the two temples. The amalgamated temple was named Jong Bop Sa. Many people in the Korean Buddhist community feel a deep sense of shame over the turbulent history of Korean Buddhism in Australia. With a spirit of goodwill the Korean community is striving for harmony and tolerance and, hopefully, they will leave in the past what belongs in the past and will firmly establish the Korean Buddhist tradition in their new home.

Won Buddhism, an evangelical 'new religious movement' from Korea, is also well established in Sydney. A nun from this order arrived in 1990. Won Buddhism is a fusion of Son (Zen) and Confucianism and has, as its object of worship, a circle, symbolising the Void which 'contains everything and is perfect' (7), rather than

the traditional Buddha image. Won Buddhism is celebrated the centenary of the birth of its founder, the Venerable Master Sotaesan, in 1991.

The Australian Buddhist Library was established on the 25th of April, 1984, through the generosity of the family of the Sydney businessman, Mr. Eric Liao. Originally situated in George Street, Sydney, it later moved to Sussex Street, adjacent to Sydney's Chinatown district. The book collection consisted of over 3,000 volumes including four editions of the Chinese Tripitaka, a Tripitaka set in Pali and English from the Pali Text Society, London, as well as Tripitaka versions in Burmese, Sinhala and Thai. It contained, also, many works and valuable reference volumes on Buddhist topics in English as well as in a few other languages. As well as a library and reading room, the library provided a much needed central meeting venue for Dharma lectures and meditation practice. Being in Sydney's main business district, the library and its staff were expensive to maintain and eventually became beyond the financial means of the Liao family. Mr.Liao eventually offered it to the Sydney Buddhist community through the Buddhist Council of N.S.W., but as its upkeep could not be guaranteed, the book collection was finally passed to the National Library in Canberra, where it currently forms a separate collection. Sadly, Sydney's Buddhist community lost its most valuable asset when the Australian Buddhist Library closed its doors early in 1987. In October, 1991, The Buddhist Library and Education Centre was established at Lewisham, an inner city suburb. One of its aims is to re-establish a Buddhist public library in a similar vein to the Australian Buddhist Library.

During the 1980's, there was a proliferation of Buddhist organisations N.S.W.. Sydney's Tibetan community, numbering less than twenty, must constitute, perhaps,

the smallest of the ethnic groups, yet, Tibetan Buddhist organisations make up one third of the many Buddhist organisations in Sydney. Tibetan Buddhism attracts many followers of Anglo-European background. Many of the local Tibetans were formerly Buddhist monks either in Tibet or in India following the Chinese occupation so they are often called upon to serve as teachers or translators for visiting lamas. Many groups following the Tibetan Buddhist tradition have been formed as the result of the short visits of various Tibetan teachers. Ven.Dzongsar Jamjang Khyentse Rinpoche, of the Sakya lineage from Bhutan has established the Dzongsar Manju Ghosha Fellowship, the Sakya Centre and the Buddhist Educational Foundation. Venerable Gyaltse Tulku Rinpoche is the resident teacher of these Sakya lineage centres. His organisations also maintain a permanent retreat centre, Vajradhara Gompa, at Kyogle in northern New South Wales. In mid 1988, these organisations organised the visit to Australia of His Holiness Sakya Trizin, the head of the Sakya lineage, one of the four main traditions of Tibetan Buddhism. The Tai Situ Trust of Australia was specifically formed to arrange the visit in early 1988 of His Eminence Tai Situpa Rinpoche, one of the four Regents of the Karma Kargyu School of Tibetan Buddhism. Another Sydney centre following the Karma Kargyu tradition is the Karma Kargyu Do-ngak Cho-ling at Artarmon, on Sydney's north shore, under the guidance of their resident lama, Ven.Thinley Gyamtso. Following the Gelug-pa tradition are the Tibetan Buddhist Society and the Vajrayana Institute, which is part of the world-wide movement, Foundation for the Preservation of the Mahayana Tradition, under the guidance of Ven. Lama Zopa and the Sakyamuni Centre whose guru is Ven. Geshe Ngawang Dhargyey.

On the 12th of December, 1984, during a short visit to Australia of Mr. Teh Thean Choo, President of the Buddhist Missionary Society in Kuala Lumpur, Malaysia

and an executive member of the international body, the World Fellowship of Buddhists, a meeting was called at the home of Dr.Tan Eng-Kong at Pymble, an upper north shore suburb of Sydney, for the purpose of establishing a regional centre of the W.F.B. in Sydney. It was at this meeting that Graeme Lyall put forward an idea, that he had long held, that an umbrella body, to promote co-operation among the many separate Buddhist organisations in Sydney, be formed. He was commissioned by those present at this meeting to assess the interest that the various organisations would have in such a proposed body. The response, though somewhat guarded at first, was generally positive, and so the Buddhist Council of N.S.W. was born. It was not until June, 1985, that a Constitution for the Council, acceptable to the diversity of its member organisations, was ratified and the inaugural Annual General meeting was held. During its relatively short history, the Council has gained the respect and support of not only the members of the Buddhist community but especially that of both the Commonwealth and State Governments. The Council provides assistance and advice to the Buddhist community generally, but the bulk of its work involves special support to the needs of the ethnic Buddhist communities. Council, currently, is the co-ordinating body for the organisation and resource supply for the teaching of Dharma to Buddhist students in N.S.W. State Schools. Combined Vesak celebrations have been organised each year, with the exception of 1990, to bring together, in a greater spirit of understanding, the many traditions that comprise the Sydney Buddhist community. The Council has also organised Seminars, the most notable of which was that held at the University of Sydney in 1986, the International Year of Peace. It was called "A Strategy for Peace" and involved a two day festival of Dharma lectures, meditation practice, an exhibition and a food fair. The Council maintains liaison with various Government Departments and acts as a lobby group to

promote the rights and interests of all Buddhists.

Another very active organisation, formed in the early 1980's, with its headquarters in the Wollongong area, south of Sydney, was the Buddha Sasana Association of Australia. This organisation is the main focus for the practise of Satipatthana Vipassana meditation in New South Wales. It is affiliated with the Mahasi Meditation Centre in Rangoon, Burma, and the head of that centre, Ven. Sayadaw U Pandita Bhivamsa, regularly visits Australia to conduct lengthy retreats in Vipassana practice. The Association also conducts regular meditation sittings at its regional centres throughout New South Wales at Sydney, Byron Bay, Blue Mountains, Bundanoon and in the National Capital, Canberra.

June, 1985 saw the arrival of Venerable Mahinda, who had a long association with both the Buddhist Missionary Society in Kuala Lumpur and the Singapore Buddhist Mission, on a one month missionary lecture tour of the eastern States of Australia. Whilst here, he realised the fertile ground ready for cultivating the Dhamma. An application was lodged, prior to his return to Malaysia, for his permanent residence visa. This was granted and he returned in July, 1986. He was appointed Bhikkhu in Charge of the Hock Cheng See Buddhist Vihara at Ambarvale, a suburb of Campbelltown, south of Sydney. This Vihara had previously been purchased by some monks from Malacca, Malaysia and the trustees had invited Ven. Mahinda to use it as his residence. It was in August, 1986, that Venerable Mahinda suggested that an Australian Buddhist Mission could be set up on similar lines to the B.M.S. and the Singapore Buddhist Mission. During its formative years the Mission has organised several meditation retreats, Buddhist Youth Camps with participants from several ethnic groups including Australian born, Burmese, Cambodian, Malaysians, Sri Lankans and Vietnamese. The aim of the camps was not

only to plant the seeds of Dhamma so that future Bodhi trees might grow but to promote mutual understanding and friendship among the diverse groups who make up our multi-cultural Australian community. The Mission's main aim is to complement rather than to duplicate the activities already being so ably performed by the other Buddhist organisations. In 1989, the Mission sponsored a two year missionary tour of one of Thailand's great meditation masters, Venerable Phra Acharn Yantra. In 1990, a generous donor offered Phra Acharn Yantra one hundred acres of land in Bundanoon, in the Southern Highlands, so that a retreat centre in the Thai forest tradition could be established in Australia. This new centre is known as Sunnyatarama Forest Monastery - Bundanoon and monks from Sunnyatarama Forest Monastery in Thailand have taken up residence there. In 1990, the Mission held a two day 'Vesak - 90' Seminar and Exhibition at the University of Sydney, attracting over 1000 visitors over the two days.

In 1987, Sydney's small Burmese community rented a cottage at North Parramatta to serve as a temporary Buddhist Vihara (monk's residence and place of worship) as the first step towards establishing a permanent Burmese temple in the Sydney area. The Abbot, Venerable Sayadaw U Zagarabhivamsa, took up residence there in January, 1988. He is a highly respected teacher and scholar, being formerly a professor of Abhidhamma and Pali language at Nalanda Buddhist Institute in India. In 1989, larger premises were purchased by the Burmese Buddhist Society at Merrylands, also in the Parramatta district from where it currently conducts its activities.

Realising the significant position that the Buddhist community now commands in Sydney, the then Premier of New South Wales, the Hon. Barrie Unsworth, M.P. held a special reception on Thursday, 16th of July, 1987 at the

State Office Block to meet members of the Sangha and representatives of the many Buddhist ethnic communities. In his speech of welcome, the Premier said:
Yours is an ancient philosophy that has had a beneficial influence on the development of the world. As a movement for peace, moderation and tolerance, you have always been and remain contemporary. That is why you are most welcome in New South Wales, as fellow citizens and as seekers and teachers of truth. I understand that the teachings of Buddha denounce the caste system, war, slavery and the taking of life in any form. His teachings on morality, mental discipline and wisdom have never been fundamentally altered. As followers of his Path, you bring to your new life in New South Wales that same spirit of tolerance, gentleness and kindness that has continued through more than two and a half thousand years of your culture. That spirit is entirely complementary to the path of multi-culturalism that I see as the future of this State. Let me conclude by repeating my welcome to you all tonight. It gives me great pleasure to see our multi-cultural Buddhist community gathered here, at the very centre of Government of our multi-cultural State.

In 1986 and again in 1991, a census was conducted throughout Australia by the Commonwealth Government's Bureau of Statistics. The only question, however, that was not compulsory to answer was that pertaining to religion. This leaves some doubt as to the accuracy of the final figures which could be well and truly understated. The census revealed that in 1986, 80,837 people claimed Buddhism as their religion. However, in 1991 the result showed an increase to 139,847, placing the Buddhists as being 0.8% of the Australian population and 0.1% of the New South Wales population making Buddhism the third major religion, after Christianity and Islam. In New South Wales in 1986, 35,114 people claimed to be Buddhists, of which 12,951 were of

Vietnamese origin. 40% of the Buddhist population of Australia lives in New South Wales.

Despite its rather shaky beginnings and occasionally shaky progress, Buddhism in New South Wales has, at last, taken root and its future, or should I say many futures, seems assured.

4. The Eightfold Path: Right Action

~~~~~~

The fourth step of the Eightfold Path, Right Action, is traditionally taught as the major aspect of the precepts. Its fundamental quality is //ahimsa// in Sanskrit, or non-harming. It means acting in such a way that we don't harm other beings. Gandhi said:

> To come to the heart of consciousness or of truth one must be able to love the meanest creature as oneself. And those that think that religion has nothing to do with politics do not know what religion really means.

To live in this complicated society in a political, economic and social reality, a major part of our spiritual practice is how we relate to all the other people and all the other beings around us, non-harming. It sounds so simple, and yet we look at the world around us, and there are currently on the planet between 40 and 50 wars, there are approximately 60 countries or more that Amnesty International lists as places where people are tortured and put in prison for their views; religious, political, social views. Even in countries where that doesn't happen so much and there isn't war, there's a lot of harm being inflicted from one person or one being to another.

So we need to begin to inquire, why does this harm happen? Why do we hurt people? Have you ever hurt anyone in your life in some
~~~~~~

fashion or other? Perhaps there's no one in the room who could not think of some instance. Why do we do it? Have you ever looked? If we want to become conscious and learn the meaning of //ahimsa// or harmlessness, let's see if we can figure out why we harm. For some people, if you look or you inquire very deeply, you see that the moment you would hurt someone else through your actions, or your words, you're in pain.

If we really look at it, a lot of the source is our own pain, maybe not all, and I don't want to explain it completely, but to just say some things for you to look into: Do we ever hurt people when we're not really in pain ourselves? And the pain that we have generates fear -- we're afraid of some more pain or we're afraid of some pain we've experienced in the past. We're afraid of the pain of hunger, or the pain of loss, or the pain of denial, or the pain of some other kind of thing. So fear gets generated.

Then out of our fear comes aggression. It can be the aggression of hatred, or the aggression of greed, of grasping -- to try to keep us safe, to get what we need so we won't have to experience pain. So we look at our hearts. Anybody who really meditates deeply sees that within us is rage and fear and greed and cruelty. Has anyone meditated for a long time and not seen cruelty in themselves, that capacity to be cruel? And there also is love, joy, tenderness, and compassion, and all of the virtues of Jesus and the great bodhisattvas. It's all in there.

We're talking about non-harming now. One part is that we see that we have aggression, hatred, and greed, and it comes from fear, and that's generated from pain. What's the route of that, what's the route of all that? Maybe the route is a very simple thing, deep but very simple. The sense of "me," of "mine," of separateness. "I have this, I want this, I want to keep this body, this sensation, this feeling, this way of being." And out of that comes fear, or out of that comes identification, pain; then fear.

If we want to learn about Right Action and non-harming, we need to look at this sense of self, of "I", and we need to look at our own

pain. We need to see how we separate ourselves. Who in the world do you consider "we" and who do you consider "them?" Are the Russians "them," are the Republicans "them," are the Democrats "them," are women "them," are men "them," are poor people "them," are rich people "them," are angry people "them," or spiritual people "us," or non-spiritual people "us"? Wherever there's that sense of "us" and "them," it's like an extension of "I," "me," "mine.". It's now "we," "us," "ours," and "them" and they're different. And then it becomes possible to harm.

From the Tibetan lama Kalu Rinpoche:

> You live in the illusion and appearance of things.
> There is a reality, but you do not know this.
> You are that reality.
> When you understand this,
> you will see that you are nothing,
> and being nothing,
> you are everything.
> That is all.

Very simple teaching. Very profound and deep.

The basis for virtue, for Right Action, is both mystical and practical, in that it comes truly from non-harming; it comes out of a sense of our connectedness with one another, and with all of life. It's mystical and practical, and it ties those levels of our experience together.

The Buddha taught the path to happiness through body, through speech, through the heart, through the mind -- altogether. And the tools he gave were those of virtue, of learning how to speak, and acting kindly and wisely, of generosity, of learning how to give and love, so we'll be happier. Virtue makes us happier; acting honestly and truly, and non-harming makes us happier, generosity makes us happy, and then meditation, calming of the mind and opening of the heart. All of these parts are the path and bring a certain joy, a

certain strength to our practice.

These are the instructions the Buddha gave the people who understood his teachings:

> "Go forth, O monks, for the gain of the many, for the welfare of many and compassion for the world, for the good, the gain, the welfare of all beings. Proclaim, O monks, the glorious Dharma and treat your life of holiness, perfect and pure."

For householders, which is what we are as a group, our main practice is virtue. You could say our main practice is awareness, but the main teachings are working with virtue, which means working with how we act in the world since we are not renunciates; how we speak and act with one another, to learn to be grounded in //ahimsa// or non-harming. In discovering the uprightness of heart and action, there's a real strength that comes to us.

In the Dhammapada, the very first verses of the Buddha, it's said:

> One person on the battlefield conquers
> an army of a thousand men,
> another conquers themselves
> and they are the greater.
> Conquer yourself, not others,
> discipline yourself and learn
> true freedom.

There's not only a sense of joy that comes from living an honest and straightforward life, but there's a power to it. Power is wonderful if it's used properly. There's a strength and a power to living honestly.

The element of Right Action or virtue really holds two parts to it; one is the non-harming which we'll call "restraint"; and the other is the positive side, not that of restraining oneself, but of caring or

acting, which we call compassion or love.

In the shortest talk the Buddha ever gave, someone asked, "Give me the gist of your teachings real simply." He said, "Fine. Refrain from that which is unskillful or that which harms; do good, and purify your heart." That's it!

The teaching of the heart and the training of it is to begin to learn how to care for all that we do with our world. My teacher Achaan Chaa loved to talk about virtue. He would give talks to the villagers week after week about it. You would think, God, he'd get bored. He doesn't want to talk about //nirvana//, or enlightenment, or the //Abhidharma// (Buddhist psychology), all the different mental states, no. He loved virtue. He loved virtue the way people love trees or air or their loved ones. He just thought it was the most marvelous, wonderful thing. And it is actually, it's fantastic. It's not talked about in our culture; we forget it. It's in the Ten Commandments, and it's in the churches. If we kept the first Commandments, maybe one of the commandments not to kill, maybe not even the Buddhist precept of not killing any life, but just half a precept not to kill people, what an amazingly different world it would be. Can you imagine a world in which people didn't kill each other? It sounds like such a horrible thing. I mean, we're not going to go and murder somebody, right? But yet what a transformed planet it would be for just half a precept. He loved virtue because they're so wonderful. It has the power to transform us.

Let's look at the traditional precepts one at a time. The first one is not to kill. That's the restraint side of it. It means non-hatred, non-acting on our aversion, not to kill people, not to kill animals, not even to kill little things if we can avoid it. Someone says, "Well, what does that mean, 'if we can avoid it?" You have to figure that out. But it means to live lightly on the earth, to take care with all the life around us. At many retreats I use that cartoon from the New Yorker of the two deer on the hillside, the hunter is down below, and the deer are talking to one another and saying, "Why don't they thin their own goddamned herd?" It's not a problem with the deer, as far as I can tell in this world. There are too many somethings but

it's not deer. We get all of these excuses and concepts about it.

To non-harm, to not kill, first we have to look at our mind states. Can you kill even little things, even insects, without there being some aversion? There's hatred, "I don't like it, let's get rid of it." That's a little bit of it. But the principle or it is to begin to connect and care for life and see that it's interconnected, that it's not separate. To refrain from killing means you have to look at your mind states. If you're about to kill even a little thing, look and see if there's an alternative, or look and see if there isn't aversion or hatred, just a little bit of it. It's only a small thing, so it doesn't take a lot. Begin to study your heart and your mind, and see what it really means to take care with your action.

That's one side, not to kill. The other side is a cultivation. The negative is to refrain; the positive is the cultivation of care and reverence for all life, of seeing the interconnectedness. We need insects; we need sea creatures; we need krill, those tiny shrimp-like things by the billions in the ocean near Antarctica. They feed the other creatures in the sea. It has a whole effect on keeping the air and the whole environment workable for all the rest of the beings. We need bees. Without bees flowers wouldn't be pollinated, and we couldn't eat a lot of our food -- and plants and trees wouldn't be able to reproduce, and the planet would be denuded. We need earthworms to aerate the soil.

I was at a conference once at the Menninger Foundation, and there were all these psychologists talking about hooking Tibetan lamas up to electrodes and what they could learn from that, and that kind of stuff. One of the people at the conference was an old Indian medicine man named Mad Bear from the Iroquois tribe in New York, the Iroquois Nation. He said, "It's my turn to speak. I don't want to tell you about experiments." He said, "Please come with me, I want to do a prayer. And all of these psychiatrists and psychologists and researchers said, "A prayer, huh?"

We all went out and we held hands in this huge field in Kansas where you look as far as you can and you see nothing but just more fields.

It's beautiful. And we held hands in a circle of about 40 people. And he started to chant, and then he started this prayer. The prayer lasted for 45 minutes. He said:

"First, I want to thank the wind, our brothers and sisters in the wind." He talked about how the wind came and it cleansed the air, and it moved the clouds, and it gave us fresh, sweet tasting oxygen and air to breathe, and how beautiful the wind was, how it touched our skin and it made us feel more alive, and it made the leaves and the trees move, how it brought rain into a season, and took it away when it was finished.

Then he thanked the clouds. He spent five minutes thanking the clouds, blessing them. You would look up and you would see these clouds, and you developed this nice relationship with the clouds. Then he thanked the wheat and the growing plants, and he thanked the sun, and he thanked the earth, and he thanked the earthworms. He spent about three minutes on the earthworms. He said, "Feel them under your feet, for all that they did to make our life possible. Our life is somehow connected with the earthworms."

When he was done, what I realized was that his prayer was the most beautiful mindfulness meditation. We stood out in that field, and felt the wind, felt the heat of the sun, and felt our feet on the earth and the soil. You couldn't help but see that you were connected. We kind of forget it on Highway l0l, you know, but we are.

Out of this sense of connectedness naturally comes a compassion, a caring, an ecology, not because you're supposed to be ecological, but because you don't want to hurt a part of this that you're a part of; you don't want to hurt yourself; you don't want to hurt all the things that contribute to this planet. Like the astronauts looking way back from the moon and seeing this tiny little sphere the size of your thumb at arms length -- it's blue, it's really fragile, and it's very small, and it has this thin layer of life on it, 8,000 miles of rock, and maybe six or twelve or fifteen feet of life. It's sort of like this little green layer of algae on the earth, and it's very precious.

The precept of not killing is both not to kill and also to sense, to connect with the life around us, with //gaia//, the fact that the earth is alive, and we're a part of that movement.

The next one is not to steal. The same thing. It's a restraint. If not killing was a restraint of not harming through hatred, not stealing is non-greed. There was non-hatred, now there's non-greed, not coveting or grasping. Don't take what isn't given to you. Have you ever tried it? We all have. I used to steal a lot when I was young. I stole a lot, not even so young, in high school and college. I thought it was kind of fun to see what I could get away with. I was much worse than that actually. That's nothing. That's true. I wasn't a terrible delinquent, but I was a medium one, I was a middle class delinquent. In some ways they're worse because they have very little excuse for it. We all have done it at some time or another, taken what isn't given, fudging on this or that. I won't even say what "this" or "that" might be.

What does it do to your mind when you do that? It brings complexity, fear, paranoia, and worry. That's one of the beauties of virtue; it eliminates fear, paranoia and complexity. Hoarding and wars, and all of these things happen because we're afraid we don't have enough.

So again, not to steal, on one side as a restraint, means to look at your heart, and see what's there -- in the moment where it really isn't yours -- or where you fudged that thing, and see what it will do to your heart and mind, not because it's bad -- you can do anything you like in this world -- but because these are the laws of happiness, and that's how they work. Examine it yourself. It also has a positive side of cultivation, to cultivate a sensitivity for the resources that we share, not only not to take that which isn't given, but to see that the world is very limited, and there are five billion humans and lots of other animals, and to take care of what we use of the resources; they're limited.

Someone taught me this exercise of lying down on the earth at night, and looking up into the stars on a clear night, and then doing one

little reversal of it. You lie back there on the grass or something, and you let yourself imagine that instead of lying on top of the earth, you're on the bottom, and that it's a big magnet that has you stuck against it, and you're looking down into space and the stars. It's a nice reversal because it gives you a sense of the infinity of the depth of space and all these spheres and things, and that somehow by the grace of gravity, you are stuck on here, and you don't fall off; To cultivate then, a responsibility for this planet that we're attached to, and that we're a part of.

Imagine if you walked through town or even walked in your yard, or wherever you are, as a caretaker, as a gardener, and then you extended it, from that place that you love to the Bay Area, or to the state, or to this country, or the planet; that you were a guardian or a caretaker of our beloved, the earth. What a wonderful way to walk on the earth. It means, if you come to something that's in the middle of the road, even if it's not your lane, it's a nice thing to pick it up, move it aside, because you care for the earth; not because you're supposed to, but because it brings joy.

Also, it means to cultivate in non-greed, in not stealing, Dharma, or giving. There are three traditional levels of giving: beggarly giving, where you give some; It's a way to practice and it's good. If you give anything it's nice, because what "giving" means is you're practicing being free, since you don't own it anyway. When you die, you give up much more than you could imagine you could give up before that. You're the accountant in the firm. You get to kind of count it for awhile and then it's taken away. The beggarly giving -- you give reluctantly. "I don't think I'll use this. Maybe I should put it in the attic. No, better I should give it to Goodwill," and you give it and it feels good. And friendly giving is after you've practiced or this comes into you, and you give things that you care about to people as if they're your brothers and sisters. "Here, let's share this," and it feels even better; it's wonderful. And kingly or queenly giving is when you so learn to enjoy the happiness of others when you give of your things, of your money, of your love, of your time, of your energy, because it's wonderful. You give your best, not because you're supposed to, but just because it brings such a sense of freedom

and joy.

The villagers where I lived as a monk understood this, sometimes anyway. I used to feel strange because I lived in one little cave-forest monastery where the people were very poor. In the dry season there was rice, and tree leaves, and batmeat curry, and anything they could get to feed themselves in the dry season. And here I'd go as a rich American, because we're all rich by their standards of making $100 a year or something like that. And they'd give me food. At first I thought, "This is really amazing; I can't do this; I can't take their food." And I thought about it, and talked to people about it, and realized for them it really was a privilege. They were saying when you came in the morning with your bowl, "We so treasure and value what you represent as a monk, as a nun, as a meditator, as someone who is trying to cultivate a purity of heart and awareness; that we want to give of the little that we have to you to support that, because we want it in our world, and in our society, and in our life." It really was touching.

I'll read a couple of stories tonight from //The Tales of a Magic Monastery// by a Trappist monk who is a friend and a wonderful teacher. This is called The Pearl of Great Price:

> He asked me what I was looking for,
> "Frankly," I said, "I'm looking for the pearl of great price."
> He slipped his hand into his pocket and
> drew it out and gave it to me.
> It was just like that.
> I was dumbfounded.
> Then I began to protest,
> "You don't want to give it to me.
> Don't you want to keep it for yourself?
> But, but --" When I kept this up,
> he said finally, "Look, is it better to have the pearl
> of great price or to give it away?"
> Well, now I have it.
> I don't tell anyone.
> For some though it would just be

disbelief and ridicule.
"You have the great pearl of great price?"
Others would be jealous because
someone might steal it.
Yes, I do have it but there's that question
that keeps coming back,
"Is it better to have it or to give it away?"
How long will that question rob me of my joy?

To not kill, to not steal, which is to say is to cultivate reverence for life, a caring, and a generosity with all the things that we get and which go away anyway. Have you ever given anything away and for the most part regretted it much a while later? You forget you even had it. You do!

Restraint from sexual misconduct is a third precept. Again, it's non-greed, non-harming. Don't act sexually in those ways which hurt people. It's very straightforward. Traditionally it means adultery or incest or sexuality with minors. For the most part in our culture we don't know who is married anymore. It means that we have to look at our sexual actions and not do it where it's going to hurt somebody. It's that simple. It goes from harming to non-harming. Why do we harm? Out of our own pain, out of our greed, out of our need. When you look, it's out of pain.

There's a positive side that can be cultivated in this. Not only non-harming because sexuality is such a powerful force. Who in this room has not been an idiot about sexuality at some time in their life? Is there a person who dare speak? And who in this room hasn't experienced some hurt by it or some fear about it? It's powerful. That's why there's a precept about it. We can cultivate a positive side which is sexuality for householders, not for renunciates, or monks, or nuns. It can be associated on one side with compulsion, grasping, greed, and fear. You know that kind? On the other side, as a neutral energy, it can be associated with love, with tenderness, with communion, with intimacy, with a growing consciousness. So we can begin to cultivate an expression of tenderness.

Why is sex so powerful? It's powerful; you know that, right? Why? Well, one reason is that it's so close to birth and death. Birth comes out of it. They call "orgasm" death in French, "petit mal" -- it's the little death. It's powerful because it's close to our biological being, our incarnation. It's also powerful because of the union or the surrender of it. It's one of the few places in life where there's natural //samadhi//, where the mind becomes unified, and it's so fantastic -- not all the time, you know how sex is, but sometimes. When you stop thinking and you're there, it's like everything comes together, the body, the heart, the mind, and there's a sense of unity, a union, and then there's a transcendence or a going beyond oneself, a surrender, of touching something greater than yourself, of losing this prison of "I, me, mine," and it's fantastic.

So we crave it then and unfortunately we get into attachment and greed. It's powerful, and for a good reason. I'm writing an article on it entitled, "Do gurus have normal sex lives?" and hopefully it will come out this fall. It's really about sexuality of gurus and teachers and disciples in many spiritual fields in the West. I won't talk so much about it tonight . There's a balance between indulgence and repression. On one side, you turn on the TV and it says, "Indulge, indulge, that will make you happy." You've tried it. It doesn't work that way because you get it and it just reinforces your greed. Or on the other side, suppression/repression in combination. So that sexuality can cause pain or it can be associated with consciousness and love, and it's so powerful.

The next precept of the four traditional ones that we'll cover tonight is drugs and intoxicants and alcohol; a different kind of precept. Again, it's the restraint-side. Not killing was non-hatred; not stealing was non-greed; no drugs or intoxicants to excess means non-delusion. Greed, hatred and delusion, the three roots of our suffering; grasping, aversion, and not seeing clearly. It means don't take intoxicants or drugs or alcohol to a point where you become heedless, where you lose your awareness. Awareness is really precious and it's hard to come by. If any of you have done a retreat, you know how hard it is to even get a few moments of it. It's precious to live

in the present moment, to be alive. It doesn't mean don't have a glass of wine or whatever, but it means pay attention, don't harm yourself or the things around you by indulgence in a way that leads to carelessness or heedlessness or loss of consciousness.

That's the negative side. The positive side is that instead of that, we can find ways to cultivate the seeds of greater awareness or sensitivity. Look in your life at what it is that makes you more conscious. Rather than being less conscious, rather than running away or deluding yourself, what brings you face-to-face with life and wakes you up -- Cultivate that.

This quality of virtue -- I spoke of it mostly in terms of the precepts because they're the fundamental principles -- means restraint of our greed, hatred and delusion, not harming beings, and not taking that which isn't ours, and taking care with our sexual and our intoxicant life. That's one side. And it means cultivating the opposite of greed, hatred and delusion, which is love, generosity and consciousness. The opposite of greed is generosity; the opposite of hatred is love; the opposite of delusion is awareness.

These are called "training precepts" in Sanskrit. "I undertake the training precepts of not killing. I'll try it; I'll work with it. I undertake the training precept of not harming." And if you learn to do this, if you train with them, they'll teach you a tremendous amount about your own mind and your own heart. If you look at them, they provide a great power in your life. There's almost no power like the power of someone who is virtuous. It's like a rock to stand on in the winds at the end of the Roman Empire. That feels like the society we live in at times. It's a rock, and it's a wonderful one; it's a really beautiful place to rest.

There's the virtue of the training precepts, of restraint and cultivation, and then that leads to inner strength or power, and then the third level that it leads to is called //abhisila//, or the highest virtue. This is natural virtue. You train with it, you practice with it, you get a sense of its strength, and why you would harm, and how that works, and what it means to live in an upright way where you

don't harm. Gradually that understanding seeps into the mind and the heart until it becomes your way of being, and then you don't think, "I'm not going to harm," or "I won't do this," or "I'll take care with that," but you feel connected with life in the world through wisdom, through the clear seeing that we are not separate, we are not an individual. It's a ruse; it's a play of consciousness; it's a fiction. You take care of the planet and the creatures and the animals like it was your garden. What a wonderful way to relate to it.

You know, our hearts are good. Even though there's plenty of greed, hatred and delusion in there, their basic root is goodness, is love. Maybe that's what we're made of is love. But we forget to look, and we forget to ask, so we get caught up in a whirlwind of busy-ness in our lives, and we break the precepts or we get caught up in a whirlwind of habit.

Each week we've been working with a different exercise. The exercise for this week is to look when you might break a precept in the tiniest way, of harming a creature, not taking care with the planet around, or fudging, taking that which really isn't yours, or your sexuality, or intoxicants, or other things like it, and look and see what's there under it. You might see greed, or hatred, or fear. And then look to see if there's pain. Look to see if there's pain in you that you're trying to get away from by doing something else.

This is the true meaning of the greatness of heart which spiritual practice teaches and demands of us, a heart which can even open to that pain, which doesn't say as a TV show in Marin County did, "I want it all now," and acts out of greed, hatred, and delusion, but recognizes, "I am it all now, that it's all a part of me," so instead of grasping, it settles and opens and says, "Pain is a part of me, and pleasure is, and all of life is a part of me. And I can feel pain and I can feel joy and love and compassion and hurt." If you can open to that in your heart, you never need to break a precept.

Study it this week, and look at when it might happen and if there's pain. And if you open your heart in that way, there comes a silent

kind of awareness, a real tenderness. It's a bridge to our connectedness with all of life around us

I read you a last story, again from //The Tales of a Magic Monastery//: It is called A Visit from the Buddha.

Why did I visit the magic monastery?
Well, I'm a monk myself,
and the strangest thing happened in my monastery.
We had a visit from the Buddha.
We prepared for it and gave him a very
warm and solemn welcome.
He stayed overnight, but he slipped away
very early in the morning.

When the monks woke up they found
graffiti all over the cloister walls.
Imagine!
And do you know what he wrote?
One word. "Trivia, trivia, trivia, trivia"
all over our monastery walls.

We went into a rage.
But then when I quieted down,
I looked about and realized, "Yup, it's true."
So much of what I saw was trivia, and most of what I heard.
But what's worse, when I closed my eyes,
all inside was trivia.

For several weeks this was my experience,
and my very efforts to rectify it just made it worse.
I left my monastery and headed for the magic monastery.

The brother showed me around.
First, the hall of laughter.
Everything said the flame of laughter,
big things and small, sacred, solemn, inconsequential, only
laughter there.

What a wonderful room.

Next, the room of sorrow, the very essence of bitter tears,
those of the bereaved mother, the lonely,
the depressed, only sorrow here.

Now, the hall of words, words upon words spoken,
and written alone they must have had some sense,
but altogether total confusion.
"Words, words," I cried, "Stop, stop,"
but I was only adding word to words.

Next, the great hall of silence.
Here there is no space and no time.

He took me finally to the Hall of Treasures.
"Take anything you want," he whispered."
I chose the heart of Jesus, and with
that I am heading back to my own monastery.

The heart of Jesus or our own hearts; to awaken, the root, the foundation of our practice, is this non-harming, is learning to see inside and to connect ourselves with life.

That's a lot of words, the fourth step of the Eightfold Path.

ACKNOWLEDGEMENTS

I am grateful to Mr. Paul Ingram who, as the then editor, published the original, very much abbreviated, version of this paper in the Buddhist Society's journal "The Middle Way" (Vol. 54, No. 2 Summer 1979, 85-88). My thanks are also due to the Ven. Nyanaponika Mahathera who encouraged me to develop my ideas further. For these, however, I must accept sole responsibility.

PART ONE: THE FUNDAMENTALS

1.1 Buddhism and the new global society

It is the manifest suffering and folly in the world that invokes humane and compassionate social action in its many different forms. For Buddhists this situation raises fundamental and controversial questions. And here, also, Buddhism has implications of some significance for Christians, humanists and other non-Buddhists.

By "social action" we mean the many different kinds of action intended to benefit mankind. These range from simple individual acts of charity, teaching and training, organized kinds of service, "Right Livelihood" in and outside the helping professions, and through various kinds of community development as well as to political activity in working for a better society.

Buddhism is a pragmatic teaching which starts from certain fundamental propositions about how we experience the world and how we act in it.

It teaches that it is possible to transcend this sorrow-laden world of our experience and is concerned first and last with ways of achieving that transcendence. What finally leads to such transcendence is what we call Wisdom. The enormous literature of Buddhism is not a literature of revelation and authority. Instead, it uses ethics and meditation, philosophy and science, art and poetry to point a Way to this Wisdom. Similarly, Buddhist writing on social action, unlike secular writings, makes finite proposals which must ultimately refer to this Wisdom, but which also are arguable in terms of our common experience.

In the East, Buddhism developed different schools of "traditions," serving the experiences of different cultures, ranging from Sri Lanka through Tibet and Mongolia to Japan. Buddhism may thus appear variously as sublime humanism, magical mysticism, poetic paradox and much else. These modes of expression, however, all converge upon the fundamental teaching, the "perennial Buddhism." This pamphlet is based upon the latter, drawing upon the different oriental traditions to present the teachings in an attempt to relate them to our modern industrial society.

From the evidence of the Buddha's discourses, or suttas in the Digha Nikaya, it is clear that early Buddhists were very much concerned with the creation of social conditions favorable to the individual cultivation of Buddhist values. An outstanding example of this, in later times, is the remarkable "welfare state" created by the Buddhist emperor, Asoka (B.C. 274-236). Walpola Rahula stated the situation -- perhaps at its strongest -- when he wrote that "Buddhism arose in India as a spiritual force against social injustices, against degrading superstitious rites, ceremonies and sacrifices; it denounced the tyranny of the caste system and advocated the equality of all men; it emancipated woman and gave her complete spiritual freedom." (Rahula, 1978). The Buddhist scriptures do indicate the general direction of Buddhist social thinking, and to that extent they are //suggestive// for our own times. Nevertheless it would be pedantic, and in some cases absurd, to apply directly to modern industrial society social prescriptions detailed to meet the needs of social

order which flourished twenty-three centuries ago. The Buddhist householder of the Sigalovada Sutta [*] experienced a different way of life from that of a computer consultant in Tokyo or an unemployed black youth in Liverpool. And the conditions which might favor their cultivation of the Middle Way must be secured by correspondingly different -- and more complex -- social, economic and political strategies.

[*] Translated in "Everyman's Ethics", The Wheel No. 14.

It is thus essential to attempt to distinguish between perennial Buddhism on the one hand and, on the other, the specific social prescriptions attributed to the historical Buddha which related the basic, perennial teaching to the specific conditions of his day. We believe that it is unscholarly to transfer the scriptural social teaching //uncritically// and with careful qualification to modern societies, or to proclaim that the Buddha was a democrat and an internationalist. The modern terms "democracy" and "internationalism" did not exist in the sense in which we understand them in the emergent feudal society in which the Buddha lived. Buddhism is ill-served in the long run by such special pleading. On the other hand, it is arguable that there are democratic and internationalist //implications// in the basic Buddhist teachings.

In the past two hundred years society in the West has undergone a more fundamental transformation than at any period since Neolithic times, whether in terms of technology or the world of ideas. And now in the East while this complex revolution is undercutting traditional Buddhism, it is also stimulating oriental Buddhism; and in the West it is creating problems and perceptions to which Buddhism seems particularly relevant. Throughout its history Buddhism has been successfully reinterpreted in accordance with different cultures, whilst at the same time preserving its inner truths. Thus has Buddhism spread and survived. The historic task of Buddhists in both East and West in the twenty-first century is to interpret perennial Buddhism in terms of the needs of industrial man and woman in the social conditions of their time, and to demonstrate its acute and urgent

relevance to the ills of that society. To this great and difficult enterprise Buddhists will bring their traditional boldness and humility. For certainly this is no time for clinging to dogma and defensiveness.

1.2 Social action and the problem of suffering

In modern Western society, humanistic social action, in its bewildering variety of forms, is seen both as the characteristic way of relieving suffering and enhancing human well-being and, at the same time, as a noble ideal of service, of self-sacrifice, by humanists of all faiths.

Buddhism, however, is a humanism in that it rejoices in the possibility of a true freedom as something inherent in human nature. For Buddhism, the ultimate freedom is to achieve full release from the root causes of all suffering: greed, hatred and delusion, which clearly are also the root causes of all social evils. Their grossest forms are those which are harmful to others. To weaken, and finally eliminate them in oneself, and, as far as possible, in society, is the basis of Buddhist ethics. And here Buddhist social action has its place.

The experience of suffering is the starting point of Buddhist teaching and of any attempt to define a distinctively //Buddhist// social action. However, misunderstanding can arise at the start, because the Pali word //dukkha//, which is commonly translated simply as "suffering," has a much wider and more subtle meaning. There is, of course, much gross, objective suffering in the world (//dukkha-dukkha//), and much of this arises from poverty, war, oppression and other social conditions. We cling to our good fortune and struggle at all costs to escape from our bad fortune.

This struggle may not be so desperate in certain countries which enjoy

a high material standard of living spread relatively evenly throughout the population. Nevertheless, the material achievements of such societies appear somehow to have been "bought" by social conditions which breed a profound sense of insecurity and anxiety, of restlessness and inner confusion, in contrast to the relatively stable and ordered society in which the Buddha taught.

Lonely, alienated industrial man has unprecedented opportunities for living life "in the context of equipment," as the philosopher Martin Heidegger so aptly put it. He has a highly valued freedom to make meaning of his life from a huge variety of more or less readily available forms of consumption or achievement -- whether career building, home making, shopping around for different world ideologies (such as Buddhism), or dedicated social service. When material acquisition palls, there is the collection of new experiences and the clocking up of new achievements. Indeed, for many their vibrating busyness becomes itself a more important self-confirmation that the goals to which it is ostensibly directed. In developing countries to live thus, "in the context of equipment," has become the great goal for increasing numbers of people. They are watched sadly by Westerners who have accumulated more experience of the disillusion and frustration of perpetual non-arrival.

Thus, from the experience of social conditions there arises both physical and psychological suffering. But more fundamental still is that profound sense of unease, of anxiety or //angst//, which arises from the very transience (//anicca//) of life (//viparinama-dukkha//). This angst, however conscious of it we may or may not be, drives the restless search to establish a meaningful self-identity in the face of a disturbing awareness of our insubstantiality (//anatta//). Ultimately, life is commonly a struggle to give meaning to life -- and to death. This is so much the essence of the ordinary human condition and we are so very much //inside// it, that for much of the time we are scarcely aware of it. This //existential// suffering is the distillation of all the various conditions to which we have referred above -- it is the human condition itself.

Buddhism offers to the individual human being a religious practice, a

Way, leading to the transcendence of suffering. Buddhist social action arises from this practice and contributes to it. From suffering arises desire to end suffering. The secular humanistic activist sets himself the endless task of //satisfying// that desire, and perhaps hopes to end social suffering by constructing utopias. The Buddhist, on the other hand, is concerned //ultimately// with the //transformation// of desire. Hence he contemplates and experiences social action in a fundamentally different way from the secular activist. This way will not be readily comprehensible to the latter, and has helped give rise to the erroneous belief that Buddhism is indifferent to human suffering. One reason why the subject of this pamphlet is so important to Buddhists is that they will have to start here if they are to begin to communicate effectively with non-Buddhist social activists. We should add, however, that although such communication may not be easy on the intellectual plane, at the level of feelings shared in compassionate social action experience together, there may be little difficulty.

We have already suggested one source of the widespread belief that Buddhism is fatalistic and is indifferent to humanistic social action. This belief also appears to stem from a misunderstanding of the Buddhist law of Karma. In fact, there is no justification for interpreting the Buddhist conception of karma as implying quietism and fatalism. The word karma (Pali: //kamma//) mean volitional action in deeds, words and thoughts, which may be morally good or bad. To be sure, our actions are //conditioned// (more or less so), but they are not inescapably //determined//. Though human behavior and thought are too often governed by deeply ingrained habits or powerful impulses, still there is always the potentiality of freedom -- or, to be more exact, of a relative freedom of choice. To widen the range of that freedom is the primary task of Buddhist mind training and meditation.

The charge of fatalism is sometimes supported by reference to the alleged "social backwardness" of Asia. But this ignores the fact that such backwardness existed also in the West until comparatively recent times. Surely, this backwardness and the alleged fatalistic acceptance of it stem from the specific social and political conditions, which were too powerful for would-be reformers to contend with. But apart

from these historic facts, it must be stressed here that the Buddha's message of compassion is certainly not indifferent to human suffering in any form; nor do Buddhists think that social misery cannot be remedied, at least partly. Though Buddhist realism does not believe in the Golden Age of a perfect society, nor in the permanence of social conditions, yet Buddhism strongly believes that social imperfections can be reduced, by the reduction of greed, hatred and ignorance, and by compassionate action guided by wisdom.

From the many utterances of the Buddha, illustrative of our remarks, two may be quoted here:

> "He who has understanding and great wisdom does not think of harming himself or another, nor of harming both alike. He rather thinks of his own welfare, of that of others, of that of both, and of the welfare of the whole world. In that way one shows understanding and great wisdom."
>
> -- Anguttara Nikaya (Gradual Sayings) Fours, No. 186

> "By protecting oneself (e.g., morally), one protects others; by protecting others, one protects oneself."
>
> -- Samyutta Nikaya (Kindred Sayings), 47; Satipatthana Samy., No. 19

In this section we have introduced the special and distinctive quality of Buddhist social action. In the remainder of Part One we shall explore this quality further, and show how it arises naturally and logically from Buddhist teaching and practice.

1.3 The weight of social karma

Individual karmic behavior patterns are created by the struggles of the individual human predicament. They condition the behavior of the individual and, in traditional Buddhist teaching, the subsequent rounds of birth and rebirth. We suggest, however, that this karmic inheritance is //also// expressed as //social// karma. Specific to time and place, different social cultures arise, whether of a group, a community, a social class or a civilization. The young are socialized to their inherited culture. Consciously and unconsciously they assimilate the norms of the approved behavior -- what is good, what is bad, and what is "the good life" for that culture.

The social karma -- the establishment of conditioned behavior patterns -- of a particular culture is and is not the aggregate of the karma of the individuals who comprise the culture. Individuals share common institutions and belief systems, but these are the results of many different wills, both in the past and the present, rather than the consequence of any single individual action. It is, however, individual karmic action that links the individual to these institutions and belief systems. Each individual is a light-reflecting jewel in Indra's net, at the points where time and space intersect. Each reflects the light of all and all of each. This is the mysticism of sociology or the sociology of mysticism!

Human societies, too, suffer the round of birth and rebirth, of revolution and stability. Each age receives the collective karmic inheritance of the last, is conditioned by it, and yet also struggles to refashion it. And within each human society, institutions, social classes, and subcultures, as well as individuals, all struggle to establish their identity and perpetuate their existence.

Capitalist industrial society has created conditions of extreme impermanence, and the struggle with a conflict-creating mood of dissatisfaction and frustration. It would be difficult to imagine any social order for which Buddhism is more relevant and needed. In these conditions, egotistical enterprise, competitive conflict, and the struggle for status become great social virtues, while, in fact, they

illustrate the import of the three root-causes of suffering -- greed, hatred, and delusion.

"These cravings," argues David Brandon, "have become cemented into all forms of social structures and institutions. People who are relatively successful at accumulating goods and social position wish to ensure that the remain successful ... Both in intended and unintended ways they erect barriers of education, finance and law to protect their property and other interests ... These structures and their protective institutions continue to exacerbate and amplify the basic human inequalities in housing, health care, education and income. They reward and encourage greed, selfishness, and exploitation rather than love, sharing and compassion. Certain people's life styles, characterized by greed and overconsumption, become dependent on the deprivation of the many. The oppressors and oppressed fall into the same trap of continual craving" (Brandon, 1976, 10-11). It should be added that communist revolution and invasion have created conditions and social structures which no less, but differently, discourage the spiritual search.

Thus we see that modern social organization may create conditions of life which not only give rise to "objective," non-volitionally caused suffering, but also tend to give rise to "subjective," volitionally caused karmic suffering, because they are more //likely// to stimulate negative karmic action than do other kinds of social organization. Thus, some of us are born into social conditions which are more likely to lead us into following the Buddhist way than others. An unskilled woman factory worker in a provincial factory town is, for example, less likely to follow the Path than a professional person living in the university quarter of the capital city. A property speculator, wheeling and dealing his samsaric livelihood anywhere is perhaps even less //likely// than either of them to do so. However, all three //may// do so. Men and women make their own history, but they make it under specific karmic conditions, inherited from previous generations //collectively//, as well as individually. The struggle is against nurture, as well as nature, manifested in the one consciousness. "The present generation are living in this world under great pressure, under a very complicated system, amidst confusion. Everybody talks

about peace, justice, equality but in practice it is very difficult. This is not because the individual person is bad but because the overall environment, the pressures, the circumstances are so strong, so influential" (Dalai Lama, 1976, p. 17).

In short, Buddhist social action is justified ultimately and above all by the existence of social as well as individual karma. Immediately it is simply concerned with relieving suffering; ultimately, in creating social conditions which will favor the ending of suffering through the individual achievement of transcendent wisdom. But is it enough, to take a beautiful little watering can to a flower dying in sandy, sterile soil? This will satisfy only the waterer. But if we muster the necessary ploughs, wells, irrigation systems and organized labor, what then will become of the spiritual life amongst all this busyness and conflict? We must next consider this fundamental question.

1.4 Is not a Buddhist's prime task to work on him- or herself?

Answer: YES and NO

Buddhism is essentially pragmatic. Buddhism is, in one sense, something that one does. It is a guide to the transformation of individual experience. In the traditional Buddhist teaching, the individual sets out with a karmic inheritance of established volitions, derived from his early life, from earlier lives and certainly from his social environment, a part of his karmic inheritance. Nevertheless, the starting point is the //individual// experiencing of life, here and now.

Our train of argument began with the anxiety, the profound sense of unease felt by the individual in his naked experience of life in the world when not masked by busyness, objectives, diversions and other confirmations and distractions. Buddhism teaches that all suffering, whether it be anxiety, or more explicitly karmic, brought-upon-ourselves-suffering, or "external" suffering, accidental

and inevitable through war, disease, old age and so on -- arise ultimately from the deluded belief in a substantial and enduring self. In that case, what need has the individual Buddhist for concern for other individuals, let alone for social action since his prime task is to work on himself in order to dissolve this delusion? Can he only //then// help others?

The answer to these questions is both yes and no. This does not mean half-way between yes and no. It means yes and no. It means that the answer to these fundamental questions of Buddhist social action cannot ultimately be logical or rational. For the Buddhist Middle Way is not the middle //between// two extremes, but the Middle Way which //transcends// the two extremes in a "higher" unity.

Different traditions of Buddhism offer different paths of spiritual practice. But all depend ultimately upon the individual becoming more deeply aware of the nature of his experience of the world, and especially of other people and hence of himself and of the nature of the self. "To learn the way of the Buddha is to learn about oneself. To learn about oneself is to forget oneself. To forget oneself is to experience the world as pure object -- to let fall one's own mind and body and the self-other mind and body" (Zen Master Dogen: //Shobogenzo//). Meditation both reveals and ultimately calms and clarifies the choppy seas and terrifying depths of the underlying emotional life. All the great traditions of spiritual practice, Buddhist -- and non-Buddhist -- emphasize the importance of periods of withdrawal for meditation and reflection. Their relative importance is not our present concern. However, in all Buddhist traditions the training emphasizes a vigilant mindfulness of mental feelings in the course of active daily life, as well as in periods of withdrawal. It all advocates the parallel development of habitual forms of ethical behavior (//sila//).

"We need not regard life as worth [either] boycotting or indulging in. Life situations are the food of awareness and mindfulness ... We wear out the shoe of //samsara// by walking on it through the practice of meditation" (Chogyam Trungpa, 1976, p. 50). The same message comes across forcefully in the Zen tradition: "For penetrating to the depths

of one's true nature ... nothing can surpass the practice of Zen in the midst of activity ... The power or wisdom obtained by practicing Zen in the world of action is like a rose that rises from the fire. It can never be destroyed. The rose that rises from the midst of flames becomes all the more beautiful and fragrant the nearer the fire rages" (Zen Master Hakuin, 1971, p. 34).

It is open to us, if we wish, to extend our active daily life to include various possible forms of social action. This offers a strong immediate kind of experience to which we can give our awareness practice. Less immediately, it serves to fertilize our meditation -- "dung for the field of bodhi." Thirdly, it offers wider opportunities for the cultivation of //sila// -- the habituation to a selfless ethic.

The above remarks are about //taking// social action. They refer to the potential benefits of social action for individual practice. They are less "reasons" for social action than reasons why a Buddhist should not desist from social action. The mainspring of Buddhist social action lies elsewhere; it arises from the heart of a ripening compassion, however flawed it still may be by ego needs. This is //giving// social action, with which we shall be concerned in the next section.

Social action as a training in self-awareness (and compassionate awareness of others) may be a discipline more appropriate to some individual temperaments, and, indeed, to some cultures and times, than to others. We are not concerned with advocating it for all Buddhists, but simply to suggesting its legitimacy for such as choose to follow it. For Buddhism has always recognized the diversity of individual temperaments and social cultures that exist, and has offered a corresponding diversity of modes of practice.

1.5 Buddhist social action as heartfelt paradox

As we have noted, the significance of social action as mindfulness training is, of course, incidental to that profound compassionate impulse which more -- or less -- leads us to seek the relief of the suffering of others. Our motives may be mixed, but to the extent that they are truly selfless they do manifest our potential for Awakening and our relatedness to all beings.

Through our practice, both in the world and in withdrawn meditation, the delusion of a struggling self becomes more and more transparent, and the conflicting opposites of good and bad, pain and pleasure, wealth and poverty, oppression and freedom are seen and understood in a Wisdom at once serene and vigilant. This Wisdom partakes of the sensitivity of the heart as well as the clarity of thought.

In this Wisdom, in the words of R.H. Blyth, things are beautiful -- but not desirable; ugly -- but not repulsive; false -- but not rejected. What is inevitable, like death, is accepted without rage; what may not be, like war, is the subject of action skillful and the more effective because, again, it is not powered and blinded by rage and hate. We may recognize an oppressor and resolutely act to remove the oppression, but we do not hate him. Absence of hatred, disgust, intolerance or righteous indignation within us is itself a part of our growth towards enlightenment (//bodhi//).

Such freedom from negative emotions should not be mistaken for indifference, passivity, compromise, loving our enemy instead of hating him, or any other of these relativities. This Wisdom transcends the Relativities which toss us this way and that. Instead, there is an awareness, alert and dispassionate, of an infinitely complex reality, but always an awareness free of despair, of self-absorbing aggression, or of blind dogma, an awareness free to act or not to act. Buddhists have their preferences, and in the face of such social cataclysms as genocide and nuclear war, they are strong preferences, but they are not repelled into quietism by them. What has been said above has to be cultivated to perfection by one following the Bodhisattva ideal. We are inspired by it, but very few of us can claim to live it. Yet we shall never attain the ideal by turning our backs upon the world and

denying the compassionate Buddha nature in us that reaches out to suffering humanity, however stained by self love those feelings may be. Only through slowly "Wearing out the shoe of //samsara//" in whatever way is appropriate to us can we hope to achieve this ideal, and not through some process of incubation.

This Great Wisdom (//prajna//) exposes the delusion, the folly, sometimes heroic, sometimes base, of human struggle in the face of many kinds of suffering. This sense of folly fuses with the sense of shared humanity in the form of compassion (//karuna//). Compassion is the everyday face of Wisdom.

In individual spiritual practice though, some will incline to a Way of Compassion and others to a Way of Wisdom, but finally the two faculties need to be balanced, each complementing and ripening the other.

> He who clings to the Void
> And neglects Compassion
> Does not reach the highest stage.
> But he who practices only Compassion
> Does not gain release from the toils of existence.
>
> -- (Saraha, 1954)

To summarize: Buddhist or non-Buddhist, it is our common humanity, our "Buddha nature," that moves us to compassion and to action for the relief of suffering. These stirrings arise from our underlying relatedness to all living things, from being brothers and sisters one to another. Buddhist spiritual practice, whether at work or in the meditation room, ripens alike the transcendental qualities of Compassion and Wisdom.

Social action starkly confronts the actor with the sufferings of others and also confronts him with his own strong feelings which commonly arise from such experience, whether they be feelings of pity, guilt, angry partisanship or whatever. Social action is thus a

powerful potential practice for the follower of the Way, a "skillful means" particularly relevant to modern society.

Finally, it is only some kind of //social// action that can be an effective and relevant response to the weight of //social// karma which oppresses humanity and which we all share.

* * *

PART TWO: THE ACTION

2.1 Giving and helping

All social action is an act of giving (//dana//), but there is a direct act which we call charitable action, whether it be the UNESCO Relief Banker's Order or out all night with the destitutes' soup kitchen. Is there anything about Buddhism that should make it less concerned actively to maintain the caring society than is Christianity or humanism? "Whoever nurses the sick serves me," said the Buddha. In our more complex society does this not include the active advancement and defense of the principles of a national health service?

The old phrase "as cold as charity" recalls numerous possibilities for self-deception in giving to others and in helping them. Here is opportunity to give out goodness in tangible form, both in our own eyes and those of the world. It may also be a temptation to impose our own ideas and standards from a position of patronage. David Brandon, who has written so well on the art of helping, reminds us that "respect is seeing the Buddha nature in the other person. It means perceiving the superficiality of positions of moral authority. The other person is as good as you. However untidy, unhygienic, poor, illiterate and bloody-minded he may seem, he is worthy of your

respect. He also has autonomy and purpose. He is another form of nature" (Brandon, 1976, p. 59).

There are many different ways in which individual Buddhists and their organizations can give help and relieve suffering. However, "charity begins at home." If a Buddhist group or society fails to provide human warmth and active caring for all of its members in their occasional difficulties and troubles -- though always with sensitivity and scrupulous respect for privacy -- where then is its Buddhism? Where is the Sangha?

In our modern industrial society there has been on the one hand a decline in personal and voluntary community care for those in need and, on the other, too little active concern for the quality and quantity of institutional care financed from the public purse that has to some extent taken its place. One facet of this which may be of particular significance for Buddhists, is a failure to recognize adequately and provide for the needs of the dying. In recent years there has been a growing awareness of this problem in North America and Europe, and a small number of hospices have been established by Christian and other groups for terminally ill people. However, only a start has been made with the problem. The first Buddhist hospice in the West has yet to be opened. And, less ambitiously, the support of regular visitors could help many lonely people to die with a greater sense of dignity and independence in our general hospitals.

2.2 Teaching

Teaching is, of course, also a form of giving and helping. Indeed, one of the two prime offenses in the Mahayana code of discipline is that of withholding the wealth of the Dharma from others. Moreover, teaching the Dharma is one of the most valuable sources of learning open to a Buddhist.

Here we are concerned primarily with the teaching of the Dharma to newcomers in Buddhism, and with the general publicizing of Buddhism among non-Buddhists.

Buddhism is by its very nature lacking in the aggressive evangelizing spirit of Christianity or Islam. It is a pragmatic system of sustained and systematic self-help practice, in which the teacher can do no more than point the way and, together with fellow Buddhists, provide support, warmth and encouragement in a long and lonely endeavor. There is here no tradition of instant conversion and forceful revelation for the enlightenment experience, however sudden, depends upon a usually lengthy period of careful cultivation. Moreover, there is a tolerant tradition of respect for the beliefs and spiritual autonomy of non-Buddhists.

Nevertheless, a virtue may be cultivated to a fault. Do we not need to find a middle way between proselytizing zeal and aloof indifference? Does not the world cry out for a Noble Truth that "leads to the cessation of suffering"? The task of teaching the Dharma also gives individual Buddhists an incentive to clarify their ideas in concise, explicit everyday terms. And it requires them to respond positively to the varied responses which their teaching will provoke in others.

It will be helpful to treat the problem on two overlapping levels, and to distinguish between (a) publicizing the Dhamma, and (b) introductory teaching for enquirers who interest has thus been awakened.

At both the above levels activity is desirable both by a central body of some kind and by local groups (in many countries there will certainly be several "central bodies," representing different traditions and tendencies). The central body can cost-effectively produce for local use introductory texts and study guides, speakers' notes, audiocassettes, slide presentations and "study kits" combining all of these different types of material. It has the resources to develop correspondence courses such as those run by the Buddhist Society in the United Kingdom which offer a well-tried model. And it will perhaps have sufficient prestige to negotiate time on the

national radio and television network.

Particularly in Western countries there are strong arguments for organizations representing the different Buddhist traditions and tendencies to set up a representative Buddhist Information and Liaison Service for propagating fundamental Buddhism and some first introductions to the different traditions and organizations. It would also provide a general information clearing house for all the groups and organizations represented. It could be financed and controlled through a representative national Buddhist council which, with growing confidence between its members and between the different Buddhist organizations which they represented, might in due course take on additional functions. Certainly in the West there is the prospect of a great many different Buddhist flowers blooming, whether oriental or new strains developed in the local culture. This is to be welcomed, but the kind of body we propose will become a necessity to avoid confusion for the outsider and to work against any tendency to sectarianism of a kind from which Buddhism has been relatively free.

Local groups will be able to draw upon the publicity and teaching resources of national centers and adapt these to the needs of local communities. Regular meetings of such groups may amount to no more than half a dozen people meeting in a private house. Sensitively handled it would be difficult to imagine a better way of introducing a newcomer to the Dharma. Such meetings are worthy of wide local publicity. A really strong local base exists where there is a resident Buddhist community of some kind, with premises convenient for meetings and several highly committed workers. Unfortunately, such communities will, understandably, represent a particular Buddhist tradition or tendency, and this exclusiveness may be less helpful to the newcomer than a local group in which he or she may have the opportunity to become acquainted with the different Buddhist traditions represented in the membership and in the program of activity.

In many countries the schools provide brief introductions to the world's great religions. Many teachers do not feel sufficiently knowledgeable about introducing Buddhism to their pupils and may be unaware of suitable materials even where these do exist. There may be

opportunities here for local groups, and certainly the Information Service suggested above would have work to do here.

Finally, the method of introductory teaching employed in some Buddhist centers leaves much to be desired both on educational grounds and as Buddhist teaching. The Buddha always adapted his teaching to the particular circumstances of the individual learner; he sometimes opened with a question about the enquirer's occupation in life, and built his teaching upon the answer to this and similar questions. True learning and teaching has as its starting point a problem or experience posed by the learner, even if this be no more than a certain ill-defined curiosity. It is there that teacher and learner must begin. The teacher starts with the learner's thoughts and feelings and helps him or her to develop understanding and awareness. This is, of course, more difficult than a standard lecture which begins and ends with the teacher's thoughts and feelings, and which may in more sense than one leave little space for the learner. It will exclude the teacher from any learning.

It follows that unless the teacher is truly inspiring, the "Dharma talk" is best used selectively: to introduce and stimulate discussion or to summarize and consolidate what has been learned. Dharma teachers must master the arts of conducting open discussion groups, in which learners can gain much from one another and can work through an emotional learning situation beyond the acquisition of facts about Buddhism. Discussion groups have become an important feature of many lay Buddhist and social action organizations in different parts of the world. They are the heart, for example, of the Japanese mass organization Rissho Kosei Kai, which explores problems of work, the family and social and economic problems.

2.3 Political action: the conversion of energy

Political power may manifest and sustain social and economic

structures which breed both material deprivation and spiritual degradation for millions of men and women. In many parts of the world it oppresses a wide range of social groupings -- national and racial minorities, women, the poor, homosexuals, liberal dissidents, and religious groups. Ultimately, political power finds its most terrible expression in war, which reaches now to the possibility of global annihilation.

For both the oppressors and the oppressed, whether in social strife or embattled nations, karmic delusion is deepened. Each group or nation emphasizes its differences, distinguishing them from its opponents; each projects its own short-comings upon them, makes them the repository of all evil, and rallies round its own vivid illusions and blood-warming hates. Collective hating, whether it be the raised fist, or prejudice concealed in a quiet community, is a heady liquor. Allied with an ideology, hate in any form will not depart tomorrow or next year. Crowned with delusive idealism, it is an awesome and murderous folly. And even when victory is achieved, the victors are still more deeply poisoned by the hate that carried them to victory. Both the revolution and the counter-revolution consume their own children. Buddhism's "Three Fires" of delusion (//moha//), hatred and ill-will (//dosa//), and greed and grasping, (//lobha//), surely burn nowhere more fiercely.

Contrariwise, political power may be used to fashion and sustain a society whose citizens are free to live in dignity and harmony and mutual respect, free of the degradation of poverty and war. In such a society of good heart //all// men and women find encouragement and support in making, if they will, the best use of their human condition in the practice of wisdom and compassion. This is the land of good karma -- not the end of human suffering, but the beginning of the end, the bodhisattva-land, the social embodiment of sila.

This is not to be confused with the belief common among the socially and politically oppressed that if power could be seized (commonly by an elite claiming to represent them), then personal, individual, "ideological" change will inevitably follow. This absolutely deterministic view of conditioning (which Marx called "vulgar

Marxism"), is as one-sided as the idea of a society of "individuals" each struggling with only his own personal karma in a private bubble hermetically sealed off from history and from other people.

Political action thus involves the Buddhist ideal of approaching each situation without prejudice but with deserved circumspection in questions of power and conflict, social oppression and social justice. These social and political conflicts are the great public samsaric driving energies of our life to which an individual responds with both aggression and self-repression. The Buddha Dharma offers the possibility of transmuting the energies of the individual into Wisdom and Compassion. At the very least, in faith and with good heart, a start can be made.

Buddhists are thus concerned with political action, first, in the direct relief of non-volitionally caused suffering now and in the future, and, secondly, with the creation of social karmic conditions favorable to the following of the Way that leads to the cessation also of volitionally-caused suffering, the creation of a society of a kind which tends to the ripening of wisdom and compassion rather than the withering of them. In the third place, political action, turbulent and ambiguous, is perhaps the most potent of the "action meditations."

It is perhaps because of this potency that some Buddhist organizations ban political discussion of any kind, even at a scholarly level, and especially any discussion of social action. There are circumstances in which this may be a sound policy. Some organizations and some individuals may not wish to handle such an emotionally powerful experience which may prove to be divisive and stir up bad feeling which cannot be worked upon in any positive way. This division would particularly tend to apply to "party politics." On the other hand, such a discussion may give an incomparable opportunity to work through conflict to a shared wisdom. Different circumstances suggest different "skillful means," but a dogmatic policy of total exclusion is likely to be ultimately unhelpful.

In this connection it is worth noting that any kind of social activity which leads to the exercise of power or conflict may stir up "the

fires" in the same way as overtly political activity. Conflict within a Buddhist organization is cut from the same cloth as conflict in a political assembly and may be just as heady, but the Buddhist context could make such an activity a much more difficult and delusive meditation subject. The danger of dishonest collusion may be greater than that of honest collusion (to borrow one of the Ven. Sangharakshita's aphorisms). The dogmatism and vehemence with which some Buddhists denounce and proscribe all political involvement is the same sad attitude as the dogmatism and vehemence of the politicians which they so rightly denounce.

To be lost in revolution or reform or conservatism is to be lost in //samsara// and the realm of the angry warrior, deluded by his power and his self-righteousness. To turn one's back upon all this is to be lost in an equally false idea of //nirvana// -- the realm of the gods no less deluded by spiritual power and righteousness, "You do not truly speak of fire if your mouth does not get burnt."

Effective social action on any but the smallest scale will soon involve the Buddhist in situations of power and conflict, of "political" power. It may be the power of office in a Buddhist organization. It may be the unsought for leadership of an action group protesting against the closing of an old people's day care center. It may be the organizing of a fund-raising movement to build a Buddhist hospice for care of the dying. It may be membership of a local government council with substantial welfare funds. It may be joining an illegal dissident group. In all these cases the Buddhist takes the tiger -- his own tiger -- by the tail. Some of the above tigers are bigger than others, but all are just as fierce. Hence a Buddhist must be mindful of the strong animal smell of political power and be able to contain and convert the valuable energy which power calls up. A sharp cutting edge is given into his hands. Its use we must explore in the sections which follow.

2.4 Buddhist political theory and policy

Buddhism and politics meet at two levels -- theory and practice. Buddhism has no explicit body of social and political theory comparable to its psychology or metaphysics. Nevertheless, a Buddhist political theory can be deduced primarily from basic Buddhism, from Dharma. Secondly, it can be deduced from the general orientation of scriptures which refer explicitly to a bygone time. We have already argued, however, that this can be done only in a limited and qualified way.

Whatever form it may take, Buddhist political theory like other Buddhist "theory" is just another theory. As it stands in print, it stands in the world of the conditioned; it is of //samsara//. It is its potential, its spiritual implications, which make it different from "secular" theory. When skillfully practiced, it becomes a spiritual practice. As always, Buddhist "theory" is like a label on a bottle describing the contents which sometimes is mistaken for the contents by zealous label-readers. In that way we can end up with a lot of politics and very little Buddhism.

This is not to decry the value of a Buddhist social and political theory -- only its misuse. We have only begun to apply Buddhism as a catalyst to the general body of Western social science and most of the work so far has been in psychology. Such work in allied fields could be extremely helpful to Buddhists and non-Buddhists alike.

The writings of some Buddhists from Sri Lanka, Burma and elsewhere offer interesting examples of attempts to relate Buddhism to nationalism and Marxism (not to be confused with communism). Earlier in the century Anagarika Dharmapala stressed the social teaching of the Buddha and its value in liberating people from materialistic preoccupations. U Nu, the eminent Burmese Buddhist statesman, argued that socialism follows naturally from the ethical and social teachings of the Buddha, and another Burmese leader, U Ba Swe, held that Marxism is relative truth, Buddhism absolute truth. This theme has been explored more recently in Trevor Ling's book "Buddha, Marx and God," (2nd ed., Macmillan, London 1979) and Michal Edwarde's "In the Blowing

out of a Flame" (Allen & Unwin 1976). Both are stimulating and controversial books. E.F. Schumacher's celebrated book "Small is Beautiful" (Blond & Briggs, London 1973) has introduced what he terms "Buddhist economics" and its urgent relevance to the modern world to many thousand of non-Buddhists. Of this we shall say more in a later section on the Buddhist "good society."

Buddhist social and political theory and policy can only be mentioned in passing in this pamphlet, although we have earlier introduced the idea of "social karma" as of central importance. We are, instead, concerned here with problems and questions arising in the practice of social and political work by Buddhists and the nature of that work.

2.5 Conflict and partisanship

The Buddhist faced with political thought, let alone political action, is straightaway plunged in the turbulent stream of conflict and partisanship and right and wrong.

Let the reader, perhaps prompted by the morning newspaper, select and hold in his mind some particular controversial public issue or public figure. Now, how does your Buddhism //feel//, please? (No, not what does your Buddhism //think//!) How does it feel when, again, some deeply held conviction is roughly handled at a Buddhist meeting or in a Buddhist journal? "The tears and anguish that follow arguments and quarrels," said the Buddha, "the arrogance and pride and the grudges and insults that go with them are all the result of one thing. They come from having preferences, from holding things precious and dear. Insults are born out of arguments and grudges are inseparable with quarrels." (Kalahavivada-sutta, trans. H. Saddhatissa, 1978, para. 2) Similarly, in the words of one of the Zen patriarchs: "The conflict between longing and loathing is the mind's worse disease" (Seng Ts'an, 1954).

In all our relationships as Buddhists we seek to cultivate a spirit of openness, cooperation, goodwill and equality. Nonetheless, we may not agree with another's opinions, and, in the final analysis, this divergence could have to do even with matters of life and death. But hopefully we shall be mindful and honest about how we think and, with what we feel, and how our opponent thinks and feels. In such controversies, are we each to confirm our own ego? Or each to benefit from the other in the search for wise judgment? Moreover, in the words of the Dalai Lama, "when a person criticizes you and exposes your faults, only then are you able to discover your faults and make amends. So your enemy is your greatest friend because he is the person who gives you the test you need for your inner strength, your tolerance, your respect for others... Instead of feeling angry with or hatred towards such a person, one should respect him and be grateful to him" (Dalai Lama, 1976, p. 9). We are one with our adversary in our common humanity; we are two in our divisive conflict. We should be deluded if we were to deny either -- if we were to rush either to compromise or to uncompromising struggle. Our conflict and our humanity may be confirmed or denied at any point along that line of possibilities which links the extremes, but ultimately it will be resolved in some other, less explicit sense. Sangharakshita expresses this paradox in his observation that "it is not enough to sympathize with something to such an extent that one agrees with it. If necessary, one must sympathize to such an extent that one disagrees" (Sangharakshita, 1979, p. 60).

Zen Master Dogen advised that "when you say something to someone he may not accept it, but do not try to make him understand it rationally. Don't argue with him; just listen to his objections, until he himself finds something wrong with them." Certainly we shall need much time and space for such wisdom and compassion as may inform us in such situations. If we do fight, may our wisdom and compassion honor both our adversary and ourselves, whether in compromise, victory or defeat.

And so,

"On how to sing

The frog school and the skylark school
Are arguing."

-- (Shiki, 1958, p. 169)

2.6 Ambiguity, complexity, uncertainty

Our "Small Mind" clings to delusions of security and permanence. It finds neither of these in the world where, on the contrary, it experiences a sense of ambiguity, complexity and uncertainty which it finds intolerable, and which make it very angry when it is obliged to confront them. Small Mind prefers to see social, economic and political phenomena in terms of black and white, or "Left and Right." It likes to take sides, and it clings to social dogmas both sophisticated and simple. ("The rich/poor are always selfish/idle.")

To the extent that we have achieved "Big Mind" we perceive with equanimity what Small Mind recoils from as intolerable. We are freer //to see the world as it is// in all the many colors of the rainbow, each merging imperceptibly into the next. In place of clinging to a few black, white and grey compartments, scrutiny is freed, encouraged by the Buddha's discriminating and differentiating attitude. (Vibhajjavada; see Wheel: No. 238/240, Anguttara Anthology, Part II, pp. 59 ff.)

We shall not be surprised then that the personal map which guides the Wise through social and political realities may turn out to be disturbingly unconventional. Their reluctance readily to "take sides" arises not from quietism or an attachment to a compromise or a belief in the "unreality" of conflict, as is variously the case with those guided by mere rules. On the contrary, they may not even sit quietly, throwing soothing generalizations into the ring, as is expected of the religious. This seemingly uncomfortable, seemingly marginal stance simply reflects a reality which is experienced with equanimity.

However, it does not require much equanimity to discover the deeper truths which underlie many current conventional truths. Conventional politics, for example, run from "left," to "right," from radicals through liberals and conservatives to fascists. Some radicals are, for example, as dogmatic and authoritarian in practice as fascists, and to their ultimate detriment they hate no less mightily. And, again, some conservatives are equally dogmatic because of an awareness of the subtle, organic nature of society and hence the danger of attempts at "instant" restructuring.

Similarly an ideology such as Marxism may be highly complex but has been conveniently oversimplified even by quite well educated partisans, both those "for" and those "against" the theory. The present Dalai Lama is one of those who have attempted to disentangle "an authentic Marxism" which he believes is not without relevance to the problems of a feudal theocracy of the kind that existed in Tibet, from "the sort one sees in countless countries claiming to be Marxist," but which are "mixing up Marxism and their national political interests and also their thirst for world hegemony" (Dalai Lama, 1979).

The Wise person sees clearly because he does not obscure his own light; he does not cast the shadow of himself over the situation. However, even an honest perception of complexity commonly paralyzes action with, "Yes, that's all very well, but...," "On the other hand it is also true that... ." Contemplative wisdom is a precious thing, but true Wisdom reveals itself in positive action -- or "in-action." Though a person may, through Clear Comprehension of Purpose (//satthaka-sampajanna//), keep loyal to the social ideal, his Clear Comprehension of (presently absent) Suitability may counsel in-action, or just "waiting."

In a social action situation the complexity and ambiguity to which we refer is strongly felt as ethical quandary, uncertainty as to what might be the best course of action. Even in small organizations all power is potentially corrupting; the power wielded is soon lost in a thicket of relative ethics, of means and ends confused, of greater and

lesser evils, of long term and short term goals. This is not a "game." It is the terrible reality of power, wealth and suffering in the world, and the confusing of good and delusion. It cannot be escaped; it can only be suffered through. We cannot refuse life's most difficult problems because we have not yet attained to Wisdom. We simply have to do our mindful and vigilant best, without guilt or blame. That is all we have to do.

2.7 Violence and non-violence

The First Precept of Buddhism is to abstain from taking life. But it must be made clear that the Buddhist "Precepts" are not commandments; they are "good resolutions," sincere aspirations voluntarily undertaken. They are signposts. They suggest to us how the truly Wise behave, beyond any sense of self and other.

Evil springs from delusion about our true nature as human beings, and it takes the characteristic forms of hatred, aggression and driving acquisitiveness. These behaviors feed upon themselves and become strongly rooted, not only in individuals but in whole cultures. Total war is no more than their most spectacular and bloody expression. In Buddhism the cultivation of //sila// (habitual morality) by attempting to follow the Precepts is an aspiration toward breaking this karmic cycle. It is a first step towards dissolving the egocentricity of headstrong willfulness, and cultivating heartfelt awareness of others. The Precepts invite us to loosen the grip, unclench the fist, and to aspire to open-handedness and open-heartedness. Whether, and to what extent, he keeps the Precepts is the responsibility of each individual. But he needs to be fully aware of what he is doing.

The karmic force of violent behavior will be affected by the circumstances in which it occurs. For example, a "diminished responsibility" may be argued in the case of conscripts forced to kill by an aggressive government. And there is surely a difference between

wars of conquest and wars of defense. Ven. Walpola Rahula described a war of national independence in Sri Lanka in the 2nd century BC conducted under the slogan "Not for kingdom but for Buddhism," and concludes that "to fight against a foreign invader for national independence became an established Buddhist tradition, since freedom was essential to the spiritual as well as the material progress of the community" (Rahula, 1978, p. 117). We may deplore the historic destruction of the great Indian Buddhist heritage in the middle-ages, undefended against the Mongol and Muslim invaders. It is important to note, however, that "according to Buddhism there is nothing that can be called a 'just war' -- which is only a false term coined and put into circulation to justify and excuse hatred, cruelty, violence and massacre" (Rahula, 1967, 84).

It is an unfortunate fact, well documented by eminent scholars such as Edward Conze and Trevor Ling, that not only have avowedly Buddhist rulers undertaken violence and killing, but also monks of all traditions in Buddhism. Nonetheless, Buddhism has no history of specifically //religious wars//, that is, wars fought to impose Buddhism upon reluctant believers.

Violence and killing are deeply corrupting in their effect upon all involved, and Buddhists will therefore try to avoid direct involvement in violent action or in earning their living in a way that, directly or indirectly, does violence. The Buddha specifically mentioned the trade in arms, in living beings and flesh.

The problem is whether, in today's "global village" we are not all in some degree responsible for war and violence to the extent that we refrain from any effort to diminish them. Can we refrain from killing a garden slug and yet refrain, for fear of "political involvement," from raising a voice against the nuclear arms race or the systematic torture of prisoners of conscience in many parts of the world?

These are questions which are disturbing to some of those Buddhists who have a sensitive social and moral conscience. This is understandable. Yet, a well-informed Buddhist must not forget that moral responsibility, or karmic guilt, originate from a volitional and

voluntary act //affirming// the harmful character of the act. If that affirmation is absent, neither the responsibility for the act, not karmic guilt, rest with those who, through some form of pressure, participate in it. A slight guilt, however, might be involved if such participants yield too easily even to moderate pressure or do not make use of "escape routes" existing in these situations. But failure to protest publicly against injustice or wrong-doings does not necessarily constitute a participation in evil. Voices of protest should be raised when there is a chance that they are heard. But "voices in the wilderness" are futile, and silence, instead, is the better choice. It is futile, indeed, if a few well-meaning heads try to run against walls of rock stone that may yield only to bulldozers. It is a sad fact that there are untold millions of our fellow-humans who do affirm violence and use it for a great variety of reasons (though not "reasonable reasons"!). They are unlikely to be moved by our protests or preachings, being entirely obsessed by divers fanaticisms or power urges. This has to be accepted as an aspect of existential suffering. Yet there are still today some opportunities and nations where a Buddhist can and should work for the cause of peace and reducing violence in human life. No efforts should be spared to convince people that violence does not solve problems or conflicts.

The great evil of violence is its separation unto death of us and them, of "my" righteousness and "your" evil. If you counter violence with violence you will deepen that separation through thoughts of bitterness and revenge. The Dhammapada says: "Never by hatred is hatred appeased, but it is appeased by kindness. This is an eternal truth" (I, 5) Buddhist non-violent social action (//avihimsa, ahimsa//) seeks to communicate, persuade and startle by moral example. "One should conquer anger through kindness, wickedness through goodness, selfishness through charity, and falsehood through truthfulness" (Dhammapada, XVII, 3).

The Buddha intervened personally on the field of battle, as in the dispute between the Sakyas and Koliyas over the waters of the Rohini. Since that time, history has provided us with a host of examples of religiously inspired non-violent social action, skillfully adapted to particular situations. These are worthy of deep contemplation.

Well known is Mahatma Gandhi's non-violent struggle against religious intolerance and British rule in India, and also the Rev. Martin Luther King's black people's civil rights movement in the United States. A familiar situation for many people today is the mass demonstration against authority, which may be conducted either peacefully or violently. As Robert Aitken Roshi has observed, "the point of disagreement, even the most fundamental disagreement, is still more superficial than the place of our common life." He recalls the case of a friend who organized an anti-nuclear demonstration at a naval base passing through a small town in which virtually every household had at least one person who gained his livelihood by working at the base. Consequently, when the friend visited every single house before the demonstration he hardly expected to win the people over to his cause. But he did convince them that he was a human being who was willing to listen to them and who had faith in them as human beings. "We finally had our demonstration, with four thousand people walking through this tiny community, nobody resisted us, nobody threw rocks. They just stood and watched" (//The Ten Directions//, Los Angeles Zen Center, 1 (3) September 1980, p. 6).

And yet again, situations may arise in which folly is mutually conditioned, but where we must in some sense take sides in establishing the ultimate responsibility. If we do not speak out then, we bow only to the conditioned and accept the endlessness of suffering and the perpetuation of evil karma. The following lines were written a few days after Archbishop Oscar Romero, of the Central American republic of El Salvador, had been shot dead on the steps of his chapel. Romero had roundly condemned the armed leftist rebel factions for their daily killings and extortions. However, he also pointed out that these were the reactions of the common people being used as "a production force under the management of a privileged society... The gap between poverty and wealth is the main cause of our trouble... And sometimes it goes further: It is the hatred in the heart of the worker for his employer... If I did not denounce the killings and the way the army removes people and ransacks peasants' homes I should be acquiescing in the violence" (//Observer// newspaper (London), March 30, 1980).

Finally there is the type of situation in which the truly massive folly of the conflict and of the contrasting evils may leave nothing to work with and there is space left only for personal sacrifice to bear witness to that folly. Such was the choice of the Buddhist monks who burnt themselves to death in the Vietnam war -- surely one of the most savage and despairing conflicts of modern times, in which an heroic group of Buddhists had for some time struggled in vain to establish an alternative "third force."

2.8 The good society

The social order to which Buddhist social action is ultimately directed must be one that minimizes non-volitionally caused suffering, whether in mind or body, and which also offers encouraging conditions for its citizens to see more clearly into their true nature and overcome their karmic inheritance. The Buddhist way is, with its compassion, its equanimity, its tolerance, its concern for self-reliance and individual responsibility, the most promising of all the models for the New Society which are an on offer.

What is needed are political and economic relations and a technology which will:

(a) Help people to overcome ego-centeredness, through co-operation with others, in place of either subordination and exploitation or the consequent sense of "righteous" struggle against all things.

(b) Offer to each a freedom which is conditional only upon the freedom and dignity of others, so that individuals may develop a self-reliant responsibility rather than being the conditioned animals of institutions and ideologies. (See "Buddhism and Democracy," Bodhi Leaves No. B. 17)

The emphasis should be on the undogmatic acceptance of a diversity of tolerably compatible material and mental "ways," whether of individuals or of whole communities. There are no short cuts to utopia, whether by "social engineering" or theocracy. The good society towards which we should aim should simply provide a means, an environment, in which different "ways," appropriate to different kinds of people, may be cultivated in mutual tolerance and understanding. A prescriptive commonwealth of saints is totally alien to Buddhism.

(c) The good society will concern itself primarily with the material and social conditions for personal growth, and only secondarily and dependently with material production. It is noteworthy that the 14th Dalai Lama, on his visit to the West in 1973, saw "nothing wrong with material progress provided man takes precedence over progress. In fact it has been my firm belief that in order to solve human problems in all their dimensions we must be able to combine and harmonize external material progress with inner mental development." The Dalai Lama contrasted the "many problems like poverty and disease, lack of education" in the East with the West, in which "the living standard is remarkably high, which is very important, very good." Yet he notes that despite these achievements there is "mental unrest," pollution, overcrowding, and other problems. "Our very life itself is a paradox, contradictory in many senses; whenever you have too much of one thing you have problems created by that. You always have extremes and therefore it is important to try and find the middle way, to balance the two" (Dalai Lama, 1976, pp. 10, 14, 29).

(d) E.F. Schumacher has concisely expressed the essence of Buddhist economics as follows:

> "While the materialist is mainly interested in goods, the Buddhist is mainly interested in liberation. But Buddhism is 'The Middle Way' and therefore in no way antagonistic to physical well-being... The keynote of Buddhist economics is simplicity and non-violence. From an economist's point of view, the marvel of the Buddhist way of life is the utter rationality of its pattern -- amazingly small means leading to

extraordinarily satisfying results" (Schumacher, 1973, p. 52).

Schumacher then outlines a "Buddhist economics" in which production would be based on a middle range technology yielding on the one hand an adequate range of material goods (and no more), and on the other a harmony with the natural environment and its resources. (See also Dr. Padmasiri de Silva's pamphlet //The Search for a Buddhist Economics//, in the series, Bodhi Leaves, No. B. 69)

The above principles suggest some kind of diverse and politically decentralized society, with co-operative management and ownership of productive wealth. It would be conceived on a human scale, whether in terms of size and complexity of organization or of environmental planning, and would use modern technology selectively rather than being used by it in the service of selfish interests. In Schumacher's words, "It is a question of finding the right path of development, the Middle Way, between materialist heedlessness and traditionalist immobility, in short, of finding 'Right Livelihood.'"

Clearly, all the above must ultimately be conceived on a world scale. "Today we have become so interdependent and so closely connected with each other that without a sense of universal responsibility, irrespective of different ideologies and faiths, our very existence or survival would be difficult" (Dalai Lama, 1976, pp. 5, 28). This statement underlines the importance of Buddhist internationalism and of social policy and social action conceived on a world scale.

The above is not offered as some kind of blueprint for utopia. Progress would be as conflict-ridden as the spiritual path of the ordinary Buddhist -- and the world may never get there anyway. However, Buddhism is a very practical and pragmatic kind of idealism, and there is, as always, really no alternative but to try.

2.9 Organizing social action

A systematic review of the different kinds of Buddhist organization for social action which have appeared in different parts of the world is beyond the scope of this pamphlet. Some considerable research would be required, and the results would merit at least a separate pamphlet.

Later we shall introduce three contrasting movements which are in some sense or others examples of Buddhist social action. Each is related more or less strongly to the particular social culture in which it originated, and all should therefore be studied as illustrative examples-in-context and not necessarily as export models for other countries. They are, however, very suggestive, and two of the three have spread beyond their country of origin.

2.9a Maintaining balance

Social action needs to be organized and practiced in such a way as to build upon its potential for spiritual practice and to guard against its seductions. Collective labor with fellow-Buddhists raises creative energy, encourages positive attitudes and engenders a strong spirit of fellowship. The conflicts, disagreements, obstacles, and discouragements which will certainly be met along the way offer rich meditation experiences and opportunity for personal growth, so long as scrupulous mindfulness is sustained.

The meditator will learn as much about himself in a contentious meeting as he will in the meditation hall. Both kinds of experience are needed, and they complement one another. Social action is a great ripener of compassion (for self as well as for others), out of the bitterness of the experiences which it commonly offers. Yet, like nothing else, it can stir up the partisan emotions and powerfully exult the opinionated ego. The busy, patronizing evangelist not only gives an undercover boost to his own ego; he also steals another

person's responsibility for himself. However, these dangers are, comparatively speaking, gross and tangible when set against the no less ego-enhancing seduction of Other-Worldliness and dharma-ridden pietism. Such "spiritual materialism," as Chogyam Trungpa calls it, has long been recognized as the ultimate and most elusive kind of self-deception which threatens the follower of the spiritual path.

The seduction lies in being carried away by our good works, in becoming subtly attached to the new goals and enterprises we have set ourselves, so that no space is left in our busily structured hours in which some saving strength of the spirit can abide. Here is opportunity to learn how to dance with time -- "the river in which we go fishing," as Thoreau called it, instead of neatly packaging away our lives in it, or letting it dictate us. And in committee lies the opportunity of slowly turning the hot, lusty partisanship of self-opinionated confirmation into the kind of space and dialogue in which we can communicate, and can even learn to love our most implacable opponents.

It is therefore important that both the individual and the group set aside regular periods for meditation, with periods of retreat at longer intervals. It is important also that experience and the feel of the social action project should as far as possible be shared openly within the Buddhist group.

In our view, the first social action of the isolated Buddhist is not to withhold the Dharma from the community in which he or she lives. However modest one's own understanding of the Dharma, there is always some first step that can be taken and something to be learned from taking that step. Even two or three can be a greater light to one another, and many forms of help are often available from outside such as working together through a correspondence course, for example, or listening to borrowed audiocassettes.

For the reasons given earlier it is important that social action projects should, where possible, be undertaken by a Buddhist //group// rather than each individual "doing his own thing." And since the Buddhist group will, in most Western countries, be small and isolated,

it is important that the work be undertaken in co-operation with like-minded non-Buddhists. This will both use energies to better effect since social action can be very time- and energy-consuming, and create an even better learning situation for all involved. Forms of social action which are high on explicit giving of service and low on conflict and power situations will obviously be easier to handle and to "give" oneself to, though still difficult in other respects. For example, organizing and participating in a rota of visits to lonely, long-stay hospital patients would contrast, in this respect, with involvement in any kind of local community development project.

2.9b Spiritual centers: example and outreach

In this section we are concerned with the significance of Buddhist residential communities both as manifestations and examples of the "good society" and as centers of social outreach (mainly, though not solely, in the form of teaching the Dharma). We may distinguish four possible kinds of activity here.

In the //first// place, any healthy spiritual community does, by its very existence, offer to the world a living example not only of the Good Life but also of the Good Society. Certain spiritual values are made manifest in its organization and practice in a way not possible in print or in talk. On the other hand, the purely contemplative and highly exclusive community can do this only in some limited, special and arguable sense.

In the //second// place, where the members of such a community undertake work as a community economically ("Right Livelihood"), then to that extent the community becomes a more realistic microcosm of what has to be done in the wider world and a more realistic model and example of how it might best be done.

//Thirdly//, such communities are commonly teaching and training

communities. This may be so in formal terms, in that they offer classes and short courses and also longer periods of training in residence, in which the trainees become veritable community members. And it may be true in terms of the "openness" of the community to outsiders who wish for the present to open up their communication with the community through some participation in work, ritual, teaching, meditation.

//Fourthly//, the community might involve itself in various kinds of outside community service, development or action beyond that of teaching, and beyond the necessarily commercial services which may sustain the community's "Right Livelihood." Examples might be running a hospice for the terminally ill, providing an information and advice center on a wide range of personal and social problems for the people of the local community, and assisting -- and maybe leading -- in various aspects of a socially deprived local community. The spiritual community thus becomes more strongly a community within a community. In this kind of situation would the spiritual community draw strength from its service to the social, the "lay" community, creating an upward spiral of energy? Or would the whole scheme founder through the progressive impoverishment and corruption of the spiritual community in a vicious downward spiral?

In the Eastern Buddhist monastic tradition the first and third aspects (above) are present. In contrast to Christian monasticism, monks are not necessarily expected to be monks for life, and the monasteries may have an important function as seminaries and as long and short stay teaching and training centers. On the other hand, economically such communities are commonly strongly sustained by what is predominantly Buddhist society. In the West there are now similar communities in all the main Buddhist traditions. Although these are to some extent sustained also by lay Buddhist contributions, their income from training and teaching fees may be important. And whether it is or not, it is clear that their actual and potential training and teaching role is likely to be very important in non-Buddhist societies in which there is a growing interest in Buddhism. A good example is the Manjusri Institute in the United Kingdom, which is now seeking official recognition for the qualifications which it awards, and which

could eventually become as much part of the national education system as, say, a Christian theological college. Such an integration of Buddhist activity into the pattern of national life in the West is, of course, most welcome, and opens up many new opportunities for making the Dharma more widely understood.

The above developments may be compared with the communities which form the basis of the Friends of the Western Buddhist Order (FWBO). In these, our second aspect (above), that of Right Livelihood, is found, in addition to the first and third.

The FWBO was founded in 1967 in the United Kingdom by the Ven. Maha Sthavira Sangharakshita, a Londoner who spent twenty years in India as a Buddhist monk and returned with the conviction that the perennial Buddhism always expresses itself anew in each new age and culture. The FWBO is concerned with building what it calls the "New Society" in the minds and practice of its members. Opening the FWBO's London Buddhist Center, Ven. Sangharakshita was reported as saying that the New Society was a spiritual community composed of individuals who are "truly human beings: self-aware, emotionally positive people whose energies flow freely and spontaneously, who accept responsibility for their own growth and development, in particular by providing three things: firstly, a residential spiritual community; secondly, a co-operative Right Livelihood situation; and thirdly a public center, offering classes, especially in meditation" (Marichi, 1979).

The FWBO does in fact follow a traditional Mahayana spiritual practice, but within this framework it does have, as the quotation above suggests, a strong Western flavor. This owes much to the eleven co-operatives by which many of the eighteen autonomous urban communities support themselves. These businesses are run by teams of community members as a means of personal and group development. They include a printing press, graphic design business, photographic and film studio, metalwork forge, and shops and cafes.

Membership of the communities (which are usually single sex), varies between four and thirty people, and often the community members pool their earnings in a "common purse." The FWBO comprises Order members,

Mitras (who have made some initial commitment) and Friends (supporters in regular contact). Each community is autonomous and has its own distinctive character. Attached to communities are seven Centers, through which the public are offered talks, courses and instruction in meditation. Regular meetings of Chairmen of Centers and other senior Order members, supported by three central secretariats, are planned for the future, but it is not intended to abridge the autonomy of the constituent communities, each of which is a separately registered legal body.

The FWBO is growing very rapidly, not only in the United Kingdom but also overseas, with branches in Finland, the Netherlands, New Zealand, Australia, the USA, and, interestingly, in India, where a sustained effort is being made to establish centers.

2.9c Community services and development

We refer in this section to the fourth aspect distinguished early in the previous section 2.9b, namely, various possible kinds of service and support which may be given by organized Buddhists to the local community in which they live. The FWBO does not undertake this kind of activity (see previous section for examples), and in fact there do not appear to be any //major// examples of it in the West.

Arguably if this kind of work is undertaken at all, it might more likely be initiated by a non-residential "lay" Buddhist group, whose members as householders and local workers may have strong roots in their town or neighborhood. As an example of what can be achieved by a relatively small group of this kind, we quote the following (from //The Middle Way//, 54 (3) Autumn 1979, p. 193):

> "The Harlow Buddhist Society have recently opened Dana House, a practical attempt to become involved with the ordinary people of the town and their problems. The new center ... has four regular

> groups using it. The first is an after-care service for those who have been mentally or emotionally ill. The center is there for those in need of friendship and understanding. The second group is a psychotherapy one, for those with more evident emotional problems. It is run by an experienced group leader and a psychologist who can be consulted privately. The third group is a beginners' meditation class based on the concept of 'Right Understanding.' The fourth group is the Buddhist group, which is not attached to any particular school of Buddhism.
>
> "Peter Donahoe writes: 'We have endeavored to provide a center which can function in relation to a whole range of different needs, a place of charity and compassion, where all are welcomed regardless of race, colour, sex or creed, welcomed to come to terms with their suffering in a way which is relative to each individual.'"

However, on the whole, it is only in the East, in societies in which Buddhist culture is predominant or important, that there are sufficiently committed Buddhists to play a part in extensive community service and development projects. For example, in Japan there are several such movements and we shall refer in the next section to one example -- Soka Gakkai, a movement which also plays a number of other roles. We must first, however, turn our attention to a pre-eminent example of a Buddhist-inspired movement for community development, the Sarvodaya Shramadana Movement of Sri Lanka.

"Sarvodaya" means "awakening of all" and "Shramadana" means "sharing of labor," making a gift of time, thought and energy. This well describes what is basically a village self-help movement, inspired by Buddhist principles and founded in 1958 as part of a general national awakening. It is now by far the largest non-governmental, voluntary organization in Sri Lanka.

The Movement learned in its earlier days how very important non-economic factors are in community development, and its projects combine spiritual-cultural with socioeconomic development. "One

important element that cannot be improved upon in Buddhist villages in particular is the unique place of the temple and the Buddhist monk, the one as the meeting place, the other as the chief exponent of this entire process." (All quotations are from the pamphlet //Ethos and Work Plan//, published by the Movement.) Founded on traditional culture, Sarvodaya Shramadana is ultimately "a nonviolent revolutionary movement for changing man and society." At the same time it aims to retain the best in the traditional social and cultural fabric of the community.

Village development projects are undertaken on the initiative of the villagers themselves. To begin with the community is made aware of the historic causes that led to the impoverishment and disintegration of the community and of its cultural and traditional values. Economic regeneration is only possible if there is a restoration of social values within the village. It is emphasized that the community itself must take the initiative in removing obstacles to development and in learning the new skills needed to carry through a change of program. The volunteers brought in to help serve only as a catalyst. Action is focused initially on Shramadana Camps in which villagers and outside volunteers work together upon some community project such as a road or irrigation channel. The experience of such Camps helps to develop a sense of community. Local leaders, working through village groups of farmers, of youth, of mothers and others, emerge to take increasing responsibility for a more or less comprehensive development program. This may include pre-school care for the under-fives, informal education for adults, health care programs, and community kitchens, with co-operation with State agencies as appropriate. By 1980, Sarvodaya was reaching 3,500 villages and was running 1,185 pre-schools.

Essential to these community development programs in Sarvodaya Shramadana's system of Development Education programs, operating through six Institutes and through the Gramodaya centers each of which co-ordinates development work in some twenty to thirty villages. The movement also provides training in self-employment for the youth who compose the largest sector of the unemployed. Although the main thrust of activity has been in rural areas, the Movement is also interested

in urban community development where conditions are favorable and there is local interest.

The main material support for the movement comes from the villagers themselves, although financial and material assistance has also been received from overseas.

It is argued that the basic principles of Sarvodaya Shramadana can be adapted to developed as well as developing countries, and Sarvodaya groups are already active in West Germany, the Netherlands, Japan and Thailand. "The rich countries also have to helped to change their purely materialistic outlook and strike a balance, with spiritual values added to the materialistic values of their own communities so that together all can build a new One World social order."

2.9d Political action and mass movements

Although there may be exceptional circumstances in certain countries, as a general rule there are strong arguments against Buddhist groups explicitly aligning themselves with any political party. It is not just that to do so would be irrelevantly divisive. As we have noted in section 2.6 (above), there are deeper, underlying social and political realities which cross-cut the conventional political spectrum of left, right and center.

Nevertheless, Buddhism, like other great religious systems, inevitably has political implications. To some extent these seem to be relatively clear, and in other senses they are arguable and controversial. Religion has its own contribution to make to politics and, ultimately, it is the only contribution to politics that really matters. It has failed both politically and as religion it falls either into the extreme of being debased by politics or of rejecting any kind of political involvement as a kind of fearful taboo. The fear of creating dissension among fellow Buddhists is understandable, but if Buddhists

cannot handle conflict in a positive and creative way, then who can?

On closer examination we shall find that it is not "politics" that requires our vigilance so much as the problems of power and conflict inherent in politics. Indeed, a better use of the term "political" would be to describe any kind of power and conflict situation. In this sense a Buddhist organization may be more intensely and unhappily "political" in managing its spiritual and practical affairs than if and when its members are discussing such an "outside" matter as conventional politics. Indeed, any such discussion of social and political questions may be banned by a Buddhist society which may be in fact intensely political in terms of underlying power and conflict with which its members have not really come to terms. All kinds of organizations have problems of power and conflict and derive their positive dynamism from the good management of these, but the dangers of self-delusion seem to be greater in religious bodies.

When we meet Buddhists and get to know them, we find that even when they do not express explicit opinions on political and social matters, it is clear from other things they say that some are inclined to a conservative "establishment" stance, some are of a radical inclination, and others more dissident still. Since the diversities of THIS and THAT exist everywhere else in the conditioned world, even Buddhists cannot pretend to exclude themselves from such disturbing distinctions. This is not really in question. What is in question is their ability to handle their differences //openly// and with Buddhist maturity. And, as we have tried to show earlier, this maturity implies a progressive diminution of emotional attachment to views of THIS and THAT, so that we no longer need either in order to sustain our identity in the world and have in some sense transcended our clinging by a higher understanding. We still carry THIS or THAT, but lightly and transparently and manageably -- without ego-weight. If we did not still carry them, how could we feel the Compassion for //samsara//, for ourselves as well as others?

Alan Watts wrote a suitably controversial little pamphlet on this subject, entitled //Beat Zen, Square Zen and Zen// (City Lights Books, San Francisco, 1959). The following passage may be found helpful to

our present discussion; what the author has to say about Zen is surely no less applicable to Buddhism as a whole. Watts argues that the Westerner who wishes to understand Zen deeply "must understand his own culture so thoroughly that he is no longer swayed by its premises unconsciously. He must really have come to terms with the Lord God Jehovah and with his Hebrew-Christian conscience so he can take it or leave it without fear or rebellion. He must be free of the itch to justify himself. Lacking this, his Zen will be either 'beat' or 'square,' either a revolt from the culture and social order or a new form of stuffiness and respectability. For Zen is above all the liberation of the mind from conventional thought and this is something utterly different from rebellion against convention, on the one hand, or adapting foreign conventions, on the other."

In the West, individual Buddhists have been particularly attracted to pacifist, disarmament, and environmentalist movements and parties. These movements have profound concerns, which, arguably, undercut the expediencies of conventional party politics. On the other hand, are they not made the more attractive by a certain political innocence, as yet uncorrupted and unblessed by the realities of power? And do they not also underestimate the karma of power and property?

However, in Western and other non-Buddhist countries Buddhist political action of any kind is little more than speculative. Buddhists are few in number, and their energies are necessarily fully occupied with learning and teaching. Teaching is the major form of social action and we have already discussed certain social action implications of the spiritual community. Social action at most verges upon certain possible kinds of service to the wider community or even participation in community development. We have already suggested the merit of such enterprises. But as to politics, using the word conventionally, in the West and at the present time, that can be no more than a matter for //discussion// in Buddhist groups. As always, individual Buddhists and perhaps informal groups will decide for themselves about political //action// or inaction.

However, in countries where there are strong Buddhist movements, well rooted in society, some kind of political stance and action seems

unavoidable and, indeed, logical and natural, though conventional party political alignments may generally be avoided.

For example, Sarvodaya Shramadana's success at the higher levels of village self-development depends on "the extent that unjust economic arrangements such as ownership of means of production, e.g., land in the hands of a few, administrative system and political power structures, are changed in such a way that the village masses become the true masters of their own selves and their environment. That the present government has gone very far in this direction is amply demonstrated when one examines the radical measures that have already been taken" (Sarvodaya Shramadana pamphlet //Ethos and Work Plan//, p. 31).

For large and explicitly Buddhist movements filing a variety of different roles, from the devotional to the so-called "New Religions" which have become particularly important in Japan in the post-war period. (Some mention has already been made of the small discussion groups which are a notable feature of Rissho-Kosei-Kai -- The "Society for Establishing Righteousness and Family Relations".) With their strong emphasis on pacifism, brotherly love, and mutual aid, these organizations have done much to assist the recovery of the Japanese people from the trauma of military aggression and the nuclear explosions which terminated it.

Soka Gakkai (literally, "Value Creation Society") is perhaps the most striking of these Japanese Buddhist socio-political movements. It is a lay Buddhist organization with over fifteen million adherents, associated with the Nichiren-Sho-Shu sect.

Soka Gakkai has an ambitious education and cultural program, and has founded its own university, high school and hospital. It also has a political party, Komeito -- the "Clean Government Party," which as early as 1967 returned twenty-five parliamentary candidates to the Japanese lower house, elected with five percent of the national vote. The party has continued to play an important part in Japanese political life, basing itself on "the principles of Buddhist democracy" and opposition to rearmament. Soka Gakkai is a populist

movement, militant, evangelical and well organized, pledged to "stand forever on the side of the people" and to "devote itself to carrying out the movement for the human revolution" (President Daisaku Ikeda). More specifically, its political achievements have included a successful confrontation with the mineowners of Hokkaido.

Attitudes to Soka Gakkai understandably differ widely. It has been criticized by some for its radicalism and by others for its conservatism; certainly it has been criticized on the grounds of dogmatism and aggressiveness. Certainly it is imbued with the nationalist fervor of Nichiren, the 13th century Buddhist monk who inspired it. Although it has some claims to missionary work in other countries, Soka Gakkai appears to have a more distinctive national flavor than the other social action groups we have looked at and to be less suitable for export.

2.9e "Universal Responsibility and the Good Heart"

Elsewhere we have already quoted the words of the Dalai Lama emphasizing the active global responsibility of Buddhists, and the importance above all of what he calls "Universal Responsibility and the Good Heart." In all countries will be found non-Buddhists, whether religionists or humanists, who share with us a non-violent, non-dogmatic and non-sectarian approach to community and world problems, and with whom Buddhists can work in close cooperation and with mutual respect. This is part of the "Good Heart" to which the Dalai Lama refers. "I believe that the embracing of a particular religion like Buddhism does not mean the rejection of another religion or one's own community. In fact it is important that those of you who have embraced Buddhism should not cut yourself off from your own society; you should continue to live within your own community and with its members. This is not only for your sake but for others' also, because by rejecting your community you obviously cannot benefit others, which actually is the basic aim of religion" (Dalai Lama,

1976).

Mr. Emilios Bouratinos and his colleagues of the Buddhist Society of Greece have framed certain farsighted proposals for the "rehumanization of society" which have Buddhist inspiration but which seek to involve non-Buddhist ideological groups with the aim of reaching some common ground with them on the organization of society. Mr. Bouratinos argues that Buddhists should address themselves "to all people somehow inspired from within -- whether they be religionists or not. This is indispensable, for we Buddhists are a tiny minority in the West and yet we must touch the hearts of many if this world is to survive in some meaningful fashion" (Letter to the author, 15 May 1980).

* * *

CONCLUSION

Certainly in the West many Buddhists will maintain that it is necessary to take one step at a time, and that for the present our individual and collective action must go into the inner strengthening of our faith and practice. They would doubtless agree on the importance of teaching the Dharma, which we have characterized as one of the important forms of social action, but they would argue that the seduction of other kinds of social action, and the drain of energy, are greater than the opportunities which it can afford for "wearing out the shoe of //samsara//." They would argue that the best way to help other people is by personal example.

This pamphlet concedes some possible truth to the above position but also offers a wide range of evidence to the contrary, to which in retrospect the reader may now wish to return. Whatever we may feel about it, certainly the debate is a worthwhile one since, as we have seen, it points to the very heart of Buddhism -- the harmony, or

creative equilibrium, of Wisdom and Compassion. And as in all worthwhile debates, the disagreement, and, still more, the possible sense of disagreeableness which it engenders, offers each of us a valuable meditation.

The needs and aptitudes of individual differ, and our debate will also appear differently to readers in different countries with different cultural backgrounds. Though we are brothers and sisters to one another, as Buddhists each must light his or her own way. To the enquiring reader who has little knowledge of Buddhism and yet who has managed to stay with me to the end, I offer my apologies if I have sometimes seemed to forget him and if my explanations have proved inadequate. For

> "This is where words fail: for what can words tell
> Of things that have no yesterday, tomorrow or today?"
>
> -- Tseng Ts'an

To a world knotted in hatreds and aggression and a host of follies, grand and mean, heroic and base, Buddhism offers a unique combination of unshakable equanimity and a deeply compassionate practical concern. And so may we tread lightly through restless experience, riding out defeats and discouragements, aware always of the peace at the heart of things, of the freedom that is free of nothing.

THE BUDDHIST PUBLICATION SOCIETY

The BPS is an approved charity dedicated to making known the Teaching of the Buddha, which has a vital message for people of all creeds. Founded in 1958, the BPS has published a wide variety of books and booklets covering a great range of topics. Its publications include accurate annotated translations of the Buddha's discourses, standard reference works, as well as original contemporary expositions of Buddhist thought and practice. These works present Buddhism as it truly is -- a dynamic force which has influenced receptive minds for the past 2500 years and is still as relevant today as it was when it first arose. A full list of our publications will be sent upon request with an enclosure of U.S. $1.00 or its equivalent to cover air mail postage.

ACKNOWLEDGEMENTS

I am grateful to Mr. Paul Ingram who, as the then editor, published the original, very much abbreviated, version of this paper in the Buddhist Society's journal "The Middle Way" (Vol. 54, No. 2 Summer 1979, 85-88). My thanks are also due to the Ven. Nyanaponika Mahathera

who encouraged me to develop my ideas further. For these, however, I must accept sole responsibility.

* * * * * * * *

PART ONE: THE FUNDAMENTALS

1.1 Buddhism and the new global society

It is the manifest suffering and folly in the world that invokes humane and compassionate social action in its many different forms. For Buddhists this situation raises fundamental and controversial questions. And here, also, Buddhism has implications of some significance for Christians, humanists and other non-Buddhists.

By "social action" we mean the many different kinds of action intended to benefit mankind. These range from simple individual acts of charity, teaching and training, organized kinds of service, "Right Livelihood" in and outside the helping professions, and through various kinds of community development as well as to political activity in working for a better society.

Buddhism is a pragmatic teaching which starts from certain fundamental propositions about how we experience the world and how we act in it. It teaches that it is possible to transcend this sorrow-laden world of our experience and is concerned first and last with ways of achieving that transcendence. What finally leads to such transcendence is what we call Wisdom. The enormous literature of Buddhism is not a literature of revelation and authority. Instead, it uses ethics and meditation, philosophy and science, art and poetry to point a Way to

this Wisdom. Similarly, Buddhist writing on social action, unlike secular writings, makes finite proposals which must ultimately refer to this Wisdom, but which also are arguable in terms of our common experience.

In the East, Buddhism developed different schools of "traditions," serving the experiences of different cultures, ranging from Sri Lanka through Tibet and Mongolia to Japan. Buddhism may thus appear variously as sublime humanism, magical mysticism, poetic paradox and much else. These modes of expression, however, all converge upon the fundamental teaching, the "perennial Buddhism." This pamphlet is based upon the latter, drawing upon the different oriental traditions to present the teachings in an attempt to relate them to our modern industrial society.

From the evidence of the Buddha's discourses, or suttas in the Digha Nikaya, it is clear that early Buddhists were very much concerned with the creation of social conditions favorable to the individual cultivation of Buddhist values. An outstanding example of this, in later times, is the remarkable "welfare state" created by the Buddhist emperor, Asoka (B.C. 274-236). Walpola Rahula stated the situation -- perhaps at its strongest -- when he wrote that "Buddhism arose in India as a spiritual force against social injustices, against degrading superstitious rites, ceremonies and sacrifices; it denounced the tyranny of the caste system and advocated the equality of all men; it emancipated woman and gave her complete spiritual freedom." (Rahula, 1978). The Buddhist scriptures do indicate the general direction of Buddhist social thinking, and to that extent they are //suggestive// for our own times. Nevertheless it would be pedantic, and in some cases absurd, to apply directly to modern industrial society social prescriptions detailed to meet the needs of social order which flourished twenty-three centuries ago. The Buddhist householder of the Sigalovada Sutta [*] experienced a different way of life from that of a computer consultant in Tokyo or an unemployed black youth in Liverpool. And the conditions which might favor their cultivation of the Middle Way must be secured by correspondingly different -- and more complex -- social, economic and political

strategies.

[*] Translated in "Everyman's Ethics", The Wheel No. 14.

It is thus essential to attempt to distinguish between perennial Buddhism on the one hand and, on the other, the specific social prescriptions attributed to the historical Buddha which related the basic, perennial teaching to the specific conditions of his day. We believe that it is unscholarly to transfer the scriptural social teaching //uncritically// and with careful qualification to modern societies, or to proclaim that the Buddha was a democrat and an internationalist. The modern terms "democracy" and "internationalism" did not exist in the sense in which we understand them in the emergent feudal society in which the Buddha lived. Buddhism is ill-served in the long run by such special pleading. On the other hand, it is arguable that there are democratic and internationalist //implications// in the basic Buddhist teachings.

In the past two hundred years society in the West has undergone a more fundamental transformation than at any period since Neolithic times, whether in terms of technology or the world of ideas. And now in the East while this complex revolution is undercutting traditional Buddhism, it is also stimulating oriental Buddhism; and in the West it is creating problems and perceptions to which Buddhism seems particularly relevant. Throughout its history Buddhism has been successfully reinterpreted in accordance with different cultures, whilst at the same time preserving its inner truths. Thus has Buddhism spread and survived. The historic task of Buddhists in both East and West in the twenty-first century is to interpret perennial Buddhism in terms of the needs of industrial man and woman in the social conditions of their time, and to demonstrate its acute and urgent relevance to the ills of that society. To this great and difficult enterprise Buddhists will bring their traditional boldness and humility. For certainly this is no time for clinging to dogma and defensiveness.

1.2 Social action and the problem of suffering

In modern Western society, humanistic social action, in its bewildering variety of forms, is seen both as the characteristic way of relieving suffering and enhancing human well-being and, at the same time, as a noble ideal of service, of self-sacrifice, by humanists of all faiths.

Buddhism, however, is a humanism in that it rejoices in the possibility of a true freedom as something inherent in human nature. For Buddhism, the ultimate freedom is to achieve full release from the root causes of all suffering: greed, hatred and delusion, which clearly are also the root causes of all social evils. Their grossest forms are those which are harmful to others. To weaken, and finally eliminate them in oneself, and, as far as possible, in society, is the basis of Buddhist ethics. And here Buddhist social action has its place.

The experience of suffering is the starting point of Buddhist teaching and of any attempt to define a distinctively //Buddhist// social action. However, misunderstanding can arise at the start, because the Pali word //dukkha//, which is commonly translated simply as "suffering," has a much wider and more subtle meaning. There is, of course, much gross, objective suffering in the world (//dukkha-dukkha//), and much of this arises from poverty, war, oppression and other social conditions. We cling to our good fortune and struggle at all costs to escape from our bad fortune.

This struggle may not be so desperate in certain countries which enjoy a high material standard of living spread relatively evenly throughout the population. Nevertheless, the material achievements of such societies appear somehow to have been "bought" by social conditions which breed a profound sense of insecurity and anxiety, of restlessness and inner confusion, in contrast to the relatively stable and ordered society in which the Buddha taught.

Lonely, alienated industrial man has unprecedented opportunities for living life "in the context of equipment," as the philosopher Martin Heidegger so aptly put it. He has a highly valued freedom to make meaning of his life from a huge variety of more or less readily available forms of consumption or achievement -- whether career building, home making, shopping around for different world ideologies (such as Buddhism), or dedicated social service. When material acquisition palls, there is the collection of new experiences and the clocking up of new achievements. Indeed, for many their vibrating busyness becomes itself a more important self-confirmation that the goals to which it is ostensibly directed. In developing countries to live thus, "in the context of equipment," has become the great goal for increasing numbers of people. They are watched sadly by Westerners who have accumulated more experience of the disillusion and frustration of perpetual non-arrival.

Thus, from the experience of social conditions there arises both physical and psychological suffering. But more fundamental still is that profound sense of unease, of anxiety or //angst//, which arises from the very transience (//anicca//) of life (//viparinama-dukkha//). This angst, however conscious of it we may or may not be, drives the restless search to establish a meaningful self-identity in the face of a disturbing awareness of our insubstantiality (//anatta//). Ultimately, life is commonly a struggle to give meaning to life -- and to death. This is so much the essence of the ordinary human condition and we are so very much //inside// it, that for much of the time we are scarcely aware of it. This //existential// suffering is the distillation of all the various conditions to which we have referred above -- it is the human condition itself.

Buddhism offers to the individual human being a religious practice, a Way, leading to the transcendence of suffering. Buddhist social action arises from this practice and contributes to it. From suffering arises desire to end suffering. The secular humanistic activist sets himself the endless task of //satisfying// that desire, and perhaps hopes to end social suffering by constructing utopias. The Buddhist, on the other hand, is concerned //ultimately// with the //transformation// of

desire. Hence he contemplates and experiences social action in a fundamentally different way from the secular activist. This way will not be readily comprehensible to the latter, and has helped give rise to the erroneous belief that Buddhism is indifferent to human suffering. One reason why the subject of this pamphlet is so important to Buddhists is that they will have to start here if they are to begin to communicate effectively with non-Buddhist social activists. We should add, however, that although such communication may not be easy on the intellectual plane, at the level of feelings shared in compassionate social action experience together, there may be little difficulty.

We have already suggested one source of the widespread belief that Buddhism is fatalistic and is indifferent to humanistic social action. This belief also appears to stem from a misunderstanding of the Buddhist law of Karma. In fact, there is no justification for interpreting the Buddhist conception of karma as implying quietism and fatalism. The word karma (Pali: //kamma//) mean volitional action in deeds, words and thoughts, which may be morally good or bad. To be sure, our actions are //conditioned// (more or less so), but they are not inescapably //determined//. Though human behavior and thought are too often governed by deeply ingrained habits or powerful impulses, still there is always the potentiality of freedom -- or, to be more exact, of a relative freedom of choice. To widen the range of that freedom is the primary task of Buddhist mind training and meditation.

The charge of fatalism is sometimes supported by reference to the alleged "social backwardness" of Asia. But this ignores the fact that such backwardness existed also in the West until comparatively recent times. Surely, this backwardness and the alleged fatalistic acceptance of it stem from the specific social and political conditions, which were too powerful for would-be reformers to contend with. But apart from these historic facts, it must be stressed here that the Buddha's message of compassion is certainly not indifferent to human suffering in any form; nor do Buddhists think that social misery cannot be remedied, at least partly. Though Buddhist realism does not believe in the Golden Age of a perfect society, nor in the permanence of social conditions, yet Buddhism strongly believes that social imperfections

can be reduced, by the reduction of greed, hatred and ignorance, and by compassionate action guided by wisdom.

From the many utterances of the Buddha, illustrative of our remarks, two may be quoted here:

> "He who has understanding and great wisdom does not think of harming himself or another, nor of harming both alike. He rather thinks of his own welfare, of that of others, of that of both, and of the welfare of the whole world. In that way one shows understanding and great wisdom."
>
> -- Anguttara Nikaya (Gradual Sayings) Fours, No. 186

> "By protecting oneself (e.g., morally), one protects others; by protecting others, one protects oneself."
>
> -- Samyutta Nikaya (Kindred Sayings), 47; Satipatthana Samy., No. 19

In this section we have introduced the special and distinctive quality of Buddhist social action. In the remainder of Part One we shall explore this quality further, and show how it arises naturally and logically from Buddhist teaching and practice.

1.3 The weight of social karma

Individual karmic behavior patterns are created by the struggles of the individual human predicament. They condition the behavior of the individual and, in traditional Buddhist teaching, the subsequent rounds of birth and rebirth. We suggest, however, that this karmic

inheritance is //also// expressed as //social// karma. Specific to time and place, different social cultures arise, whether of a group, a community, a social class or a civilization. The young are socialized to their inherited culture. Consciously and unconsciously they assimilate the norms of the approved behavior -- what is good, what is bad, and what is "the good life" for that culture.

The social karma -- the establishment of conditioned behavior patterns -- of a particular culture is and is not the aggregate of the karma of the individuals who comprise the culture. Individuals share common institutions and belief systems, but these are the results of many different wills, both in the past and the present, rather than the consequence of any single individual action. It is, however, individual karmic action that links the individual to these institutions and belief systems. Each individual is a light-reflecting jewel in Indra's net, at the points where time and space intersect. Each reflects the light of all and all of each. This is the mysticism of sociology or the sociology of mysticism!

Human societies, too, suffer the round of birth and rebirth, of revolution and stability. Each age receives the collective karmic inheritance of the last, is conditioned by it, and yet also struggles to refashion it. And within each human society, institutions, social classes, and subcultures, as well as individuals, all struggle to establish their identity and perpetuate their existence.

Capitalist industrial society has created conditions of extreme impermanence, and the struggle with a conflict-creating mood of dissatisfaction and frustration. It would be difficult to imagine any social order for which Buddhism is more relevant and needed. In these conditions, egotistical enterprise, competitive conflict, and the struggle for status become great social virtues, while, in fact, they illustrate the import of the three root-causes of suffering -- greed, hatred, and delusion.

"These cravings," argues David Brandon, "have become cemented into all forms of social structures and institutions. People who are relatively successful at accumulating goods and social position wish to ensure

that the remain successful ... Both in intended and unintended ways they erect barriers of education, finance and law to protect their property and other interests ... These structures and their protective institutions continue to exacerbate and amplify the basic human inequalities in housing, health care, education and income. They reward and encourage greed, selfishness, and exploitation rather than love, sharing and compassion. Certain people's life styles, characterized by greed and overconsumption, become dependent on the deprivation of the many. The oppressors and oppressed fall into the same trap of continual craving" (Brandon, 1976, 10-11). It should be added that communist revolution and invasion have created conditions and social structures which no less, but differently, discourage the spiritual search.

Thus we see that modern social organization may create conditions of life which not only give rise to "objective," non-volitionally caused suffering, but also tend to give rise to "subjective," volitionally caused karmic suffering, because they are more //likely// to stimulate negative karmic action than do other kinds of social organization. Thus, some of us are born into social conditions which are more likely to lead us into following the Buddhist way than others. An unskilled woman factory worker in a provincial factory town is, for example, less likely to follow the Path than a professional person living in the university quarter of the capital city. A property speculator, wheeling and dealing his samsaric livelihood anywhere is perhaps even less //likely// than either of them to do so. However, all three //may// do so. Men and women make their own history, but they make it under specific karmic conditions, inherited from previous generations //collectively//, as well as individually. The struggle is against nurture, as well as nature, manifested in the one consciousness. "The present generation are living in this world under great pressure, under a very complicated system, amidst confusion. Everybody talks about peace, justice, equality but in practice it is very difficult. This is not because the individual person is bad but because the overall environment, the pressures, the circumstances are so strong, so influential" (Dalai Lama, 1976, p. 17).

In short, Buddhist social action is justified ultimately and above all

by the existence of social as well as individual karma. Immediately it is simply concerned with relieving suffering; ultimately, in creating social conditions which will favor the ending of suffering through the individual achievement of transcendent wisdom. But is it enough, to take a beautiful little watering can to a flower dying in sandy, sterile soil? This will satisfy only the waterer. But if we muster the necessary ploughs, wells, irrigation systems and organized labor, what then will become of the spiritual life amongst all this busyness and conflict? We must next consider this fundamental question.

1.4 Is not a Buddhist's prime task to work on him- or herself?

Answer: YES and NO

Buddhism is essentially pragmatic. Buddhism is, in one sense, something that one does. It is a guide to the transformation of individual experience. In the traditional Buddhist teaching, the individual sets out with a karmic inheritance of established volitions, derived from his early life, from earlier lives and certainly from his social environment, a part of his karmic inheritance. Nevertheless, the starting point is the //individual// experiencing of life, here and now.

Our train of argument began with the anxiety, the profound sense of unease felt by the individual in his naked experience of life in the world when not masked by busyness, objectives, diversions and other confirmations and distractions. Buddhism teaches that all suffering, whether it be anxiety, or more explicitly karmic, brought-upon-ourselves-suffering, or "external" suffering, accidental and inevitable through war, disease, old age and so on -- arise ultimately from the deluded belief in a substantial and enduring self. In that case, what need has the individual Buddhist for concern for other individuals, let alone for social action since his prime task is to work on himself in order to dissolve this delusion? Can he only //then// help others?

The answer to these questions is both yes and no. This does not mean half-way between yes and no. It means yes and no. It means that the answer to these fundamental questions of Buddhist social action cannot ultimately be logical or rational. For the Buddhist Middle Way is not the middle //between// two extremes, but the Middle Way which //transcends// the two extremes in a "higher" unity.

Different traditions of Buddhism offer different paths of spiritual practice. But all depend ultimately upon the individual becoming more deeply aware of the nature of his experience of the world, and especially of other people and hence of himself and of the nature of the self. "To learn the way of the Buddha is to learn about oneself. To learn about oneself is to forget oneself. To forget oneself is to experience the world as pure object -- to let fall one's own mind and body and the self-other mind and body" (Zen Master Dogen: //Shobogenzo//). Meditation both reveals and ultimately calms and clarifies the choppy seas and terrifying depths of the underlying emotional life. All the great traditions of spiritual practice, Buddhist -- and non-Buddhist -- emphasize the importance of periods of withdrawal for meditation and reflection. Their relative importance is not our present concern. However, in all Buddhist traditions the training emphasizes a vigilant mindfulness of mental feelings in the course of active daily life, as well as in periods of withdrawal. It all advocates the parallel development of habitual forms of ethical behavior (//sila//).

"We need not regard life as worth [either] boycotting or indulging in. Life situations are the food of awareness and mindfulness ... We wear out the shoe of //samsara// by walking on it through the practice of meditation" (Chogyam Trungpa, 1976, p. 50). The same message comes across forcefully in the Zen tradition: "For penetrating to the depths of one's true nature ... nothing can surpass the practice of Zen in the midst of activity ... The power or wisdom obtained by practicing Zen in the world of action is like a rose that rises from the fire. It can never be destroyed. The rose that rises from the midst of flames becomes all the more beautiful and fragrant the nearer the fire rages" (Zen Master Hakuin, 1971, p. 34).

It is open to us, if we wish, to extend our active daily life to include various possible forms of social action. This offers a strong immediate kind of experience to which we can give our awareness practice. Less immediately, it serves to fertilize our meditation -- "dung for the field of bodhi." Thirdly, it offers wider opportunities for the cultivation of //sila// -- the habituation to a selfless ethic.

The above remarks are about //taking// social action. They refer to the potential benefits of social action for individual practice. They are less "reasons" for social action than reasons why a Buddhist should not desist from social action. The mainspring of Buddhist social action lies elsewhere; it arises from the heart of a ripening compassion, however flawed it still may be by ego needs. This is //giving// social action, with which we shall be concerned in the next section.

Social action as a training in self-awareness (and compassionate awareness of others) may be a discipline more appropriate to some individual temperaments, and, indeed, to some cultures and times, than to others. We are not concerned with advocating it for all Buddhists, but simply to suggesting its legitimacy for such as choose to follow it. For Buddhism has always recognized the diversity of individual temperaments and social cultures that exist, and has offered a corresponding diversity of modes of practice.

1.5 Buddhist social action as heartfelt paradox

As we have noted, the significance of social action as mindfulness training is, of course, incidental to that profound compassionate impulse which more -- or less -- leads us to seek the relief of the suffering of others. Our motives may be mixed, but to the extent that they are truly selfless they do manifest our potential for Awakening

and our relatedness to all beings.

Through our practice, both in the world and in withdrawn meditation, the delusion of a struggling self becomes more and more transparent, and the conflicting opposites of good and bad, pain and pleasure, wealth and poverty, oppression and freedom are seen and understood in a Wisdom at once serene and vigilant. This Wisdom partakes of the sensitivity of the heart as well as the clarity of thought.

In this Wisdom, in the words of R.H. Blyth, things are beautiful -- but not desirable; ugly -- but not repulsive; false -- but not rejected. What is inevitable, like death, is accepted without rage; what may not be, like war, is the subject of action skillful and the more effective because, again, it is not powered and blinded by rage and hate. We may recognize an oppressor and resolutely act to remove the oppression, but we do not hate him. Absence of hatred, disgust, intolerance or righteous indignation within us is itself a part of our growth towards enlightenment (//bodhi//).

Such freedom from negative emotions should not be mistaken for indifference, passivity, compromise, loving our enemy instead of hating him, or any other of these relativities. This Wisdom transcends the Relativities which toss us this way and that. Instead, there is an awareness, alert and dispassionate, of an infinitely complex reality, but always an awareness free of despair, of self-absorbing aggression, or of blind dogma, an awareness free to act or not to act. Buddhists have their preferences, and in the face of such social cataclysms as genocide and nuclear war, they are strong preferences, but they are not repelled into quietism by them. What has been said above has to be cultivated to perfection by one following the Bodhisattva ideal. We are inspired by it, but very few of us can claim to live it. Yet we shall never attain the ideal by turning our backs upon the world and denying the compassionate Buddha nature in us that reaches out to suffering humanity, however stained by self love those feelings may be. Only through slowly "Wearing out the shoe of //samsara//" in whatever way is appropriate to us can we hope to achieve this ideal, and not through some process of incubation.

This Great Wisdom (//prajna//) exposes the delusion, the folly, sometimes heroic, sometimes base, of human struggle in the face of many kinds of suffering. This sense of folly fuses with the sense of shared humanity in the form of compassion (//karuna//). Compassion is the everyday face of Wisdom.

In individual spiritual practice though, some will incline to a Way of Compassion and others to a Way of Wisdom, but finally the two faculties need to be balanced, each complementing and ripening the other.

> He who clings to the Void
> And neglects Compassion
> Does not reach the highest stage.
> But he who practices only Compassion
> Does not gain release from the toils of existence.
>
> -- (Saraha, 1954)

To summarize: Buddhist or non-Buddhist, it is our common humanity, our "Buddha nature," that moves us to compassion and to action for the relief of suffering. These stirrings arise from our underlying relatedness to all living things, from being brothers and sisters one to another. Buddhist spiritual practice, whether at work or in the meditation room, ripens alike the transcendental qualities of Compassion and Wisdom.

Social action starkly confronts the actor with the sufferings of others and also confronts him with his own strong feelings which commonly arise from such experience, whether they be feelings of pity, guilt, angry partisanship or whatever. Social action is thus a powerful potential practice for the follower of the Way, a "skillful means" particularly relevant to modern society.

Finally, it is only some kind of //social// action that can be an effective and relevant response to the weight of //social// karma which oppresses humanity and which we all share.

* * *

PART TWO: THE ACTION

2.1 Giving and helping

All social action is an act of giving (//dana//), but there is a direct act which we call charitable action, whether it be the UNESCO Relief Banker's Order or out all night with the destitutes' soup kitchen. Is there anything about Buddhism that should make it less concerned actively to maintain the caring society than is Christianity or humanism? "Whoever nurses the sick serves me," said the Buddha. In our more complex society does this not include the active advancement and defense of the principles of a national health service?

The old phrase "as cold as charity" recalls numerous possibilities for self-deception in giving to others and in helping them. Here is opportunity to give out goodness in tangible form, both in our own eyes and those of the world. It may also be a temptation to impose our own ideas and standards from a position of patronage. David Brandon, who has written so well on the art of helping, reminds us that "respect is seeing the Buddha nature in the other person. It means perceiving the superficiality of positions of moral authority. The other person is as good as you. However untidy, unhygienic, poor, illiterate and bloody-minded he may seem, he is worthy of your respect. He also has autonomy and purpose. He is another form of nature" (Brandon, 1976, p. 59).

There are many different ways in which individual Buddhists and their organizations can give help and relieve suffering. However, "charity begins at home." If a Buddhist group or society fails to provide human

warmth and active caring for all of its members in their occasional difficulties and troubles -- though always with sensitivity and scrupulous respect for privacy -- where then is its Buddhism? Where is the Sangha?

In our modern industrial society there has been on the one hand a decline in personal and voluntary community care for those in need and, on the other, too little active concern for the quality and quantity of institutional care financed from the public purse that has to some extent taken its place. One facet of this which may be of particular significance for Buddhists, is a failure to recognize adequately and provide for the needs of the dying. In recent years there has been a growing awareness of this problem in North America and Europe, and a small number of hospices have been established by Christian and other groups for terminally ill people. However, only a start has been made with the problem. The first Buddhist hospice in the West has yet to be opened. And, less ambitiously, the support of regular visitors could help many lonely people to die with a greater sense of dignity and independence in our general hospitals.

2.2 Teaching

Teaching is, of course, also a form of giving and helping. Indeed, one of the two prime offenses in the Mahayana code of discipline is that of withholding the wealth of the Dharma from others. Moreover, teaching the Dharma is one of the most valuable sources of learning open to a Buddhist.

Here we are concerned primarily with the teaching of the Dharma to newcomers in Buddhism, and with the general publicizing of Buddhism among non-Buddhists.

Buddhism is by its very nature lacking in the aggressive evangelizing spirit of Christianity or Islam. It is a pragmatic system of sustained

and systematic self-help practice, in which the teacher can do no more than point the way and, together with fellow Buddhists, provide support, warmth and encouragement in a long and lonely endeavor. There is here no tradition of instant conversion and forceful revelation for the enlightenment experience, however sudden, depends upon a usually lengthy period of careful cultivation. Moreover, there is a tolerant tradition of respect for the beliefs and spiritual autonomy of non-Buddhists.

Nevertheless, a virtue may be cultivated to a fault. Do we not need to find a middle way between proselytizing zeal and aloof indifference? Does not the world cry out for a Noble Truth that "leads to the cessation of suffering"? The task of teaching the Dharma also gives individual Buddhists an incentive to clarify their ideas in concise, explicit everyday terms. And it requires them to respond positively to the varied responses which their teaching will provoke in others.

It will be helpful to treat the problem on two overlapping levels, and to distinguish between (a) publicizing the Dhamma, and (b) introductory teaching for enquirers who interest has thus been awakened.

At both the above levels activity is desirable both by a central body of some kind and by local groups (in many countries there will certainly be several "central bodies," representing different traditions and tendencies). The central body can cost-effectively produce for local use introductory texts and study guides, speakers' notes, audiocassettes, slide presentations and "study kits" combining all of these different types of material. It has the resources to develop correspondence courses such as those run by the Buddhist Society in the United Kingdom which offer a well-tried model. And it will perhaps have sufficient prestige to negotiate time on the national radio and television network.

Particularly in Western countries there are strong arguments for organizations representing the different Buddhist traditions and tendencies to set up a representative Buddhist Information and Liaison Service for propagating fundamental Buddhism and some first

introductions to the different traditions and organizations. It would also provide a general information clearing house for all the groups and organizations represented. It could be financed and controlled through a representative national Buddhist council which, with growing confidence between its members and between the different Buddhist organizations which they represented, might in due course take on additional functions. Certainly in the West there is the prospect of a great many different Buddhist flowers blooming, whether oriental or new strains developed in the local culture. This is to be welcomed, but the kind of body we propose will become a necessity to avoid confusion for the outsider and to work against any tendency to sectarianism of a kind from which Buddhism has been relatively free.

Local groups will be able to draw upon the publicity and teaching resources of national centers and adapt these to the needs of local communities. Regular meetings of such groups may amount to no more than half a dozen people meeting in a private house. Sensitively handled it would be difficult to imagine a better way of introducing a newcomer to the Dharma. Such meetings are worthy of wide local publicity. A really strong local base exists where there is a resident Buddhist community of some kind, with premises convenient for meetings and several highly committed workers. Unfortunately, such communities will, understandably, represent a particular Buddhist tradition or tendency, and this exclusiveness may be less helpful to the newcomer than a local group in which he or she may have the opportunity to become acquainted with the different Buddhist traditions represented in the membership and in the program of activity.

In many countries the schools provide brief introductions to the world's great religions. Many teachers do not feel sufficiently knowledgeable about introducing Buddhism to their pupils and may be unaware of suitable materials even where these do exist. There may be opportunities here for local groups, and certainly the Information Service suggested above would have work to do here.

Finally, the method of introductory teaching employed in some Buddhist centers leaves much to be desired both on educational grounds and as Buddhist teaching. The Buddha always adapted his teaching to the

particular circumstances of the individual learner; he sometimes opened with a question about the enquirer's occupation in life, and built his teaching upon the answer to this and similar questions. True learning and teaching has as its starting point a problem or experience posed by the learner, even if this be no more than a certain ill-defined curiosity. It is there that teacher and learner must begin. The teacher starts with the learner's thoughts and feelings and helps him or her to develop understanding and awareness. This is, of course, more difficult than a standard lecture which begins and ends with the teacher's thoughts and feelings, and which may in more sense than one leave little space for the learner. It will exclude the teacher from any learning.

It follows that unless the teacher is truly inspiring, the "Dharma talk" is best used selectively: to introduce and stimulate discussion or to summarize and consolidate what has been learned. Dharma teachers must master the arts of conducting open discussion groups, in which learners can gain much from one another and can work through an emotional learning situation beyond the acquisition of facts about Buddhism. Discussion groups have become an important feature of many lay Buddhist and social action organizations in different parts of the world. They are the heart, for example, of the Japanese mass organization Rissho Kosei Kai, which explores problems of work, the family and social and economic problems.

2.3 Political action: the conversion of energy

Political power may manifest and sustain social and economic structures which breed both material deprivation and spiritual degradation for millions of men and women. In many parts of the world it oppresses a wide range of social groupings -- national and racial minorities, women, the poor, homosexuals, liberal dissidents, and religious groups. Ultimately, political power finds its most terrible expression in war, which reaches now to the possibility of global

annihilation.

For both the oppressors and the oppressed, whether in social strife or embattled nations, karmic delusion is deepened. Each group or nation emphasizes its differences, distinguishing them from its opponents; each projects its own short-comings upon them, makes them the repository of all evil, and rallies round its own vivid illusions and blood-warming hates. Collective hating, whether it be the raised fist, or prejudice concealed in a quiet community, is a heady liquor. Allied with an ideology, hate in any form will not depart tomorrow or next year. Crowned with delusive idealism, it is an awesome and murderous folly. And even when victory is achieved, the victors are still more deeply poisoned by the hate that carried them to victory. Both the revolution and the counter-revolution consume their own children. Buddhism's "Three Fires" of delusion (//moha//), hatred and ill-will (//dosa//), and greed and grasping, (//lobha//), surely burn nowhere more fiercely.

Contrariwise, political power may be used to fashion and sustain a society whose citizens are free to live in dignity and harmony and mutual respect, free of the degradation of poverty and war. In such a society of good heart //all// men and women find encouragement and support in making, if they will, the best use of their human condition in the practice of wisdom and compassion. This is the land of good karma -- not the end of human suffering, but the beginning of the end, the bodhisattva-land, the social embodiment of sila.

This is not to be confused with the belief common among the socially and politically oppressed that if power could be seized (commonly by an elite claiming to represent them), then personal, individual, "ideological" change will inevitably follow. This absolutely deterministic view of conditioning (which Marx called "vulgar Marxism"), is as one-sided as the idea of a society of "individuals" each struggling with only his own personal karma in a private bubble hermetically sealed off from history and from other people.

Political action thus involves the Buddhist ideal of approaching each situation without prejudice but with deserved circumspection in

questions of power and conflict, social oppression and social justice. These social and political conflicts are the great public samsaric driving energies of our life to which an individual responds with both aggression and self-repression. The Buddha Dharma offers the possibility of transmuting the energies of the individual into Wisdom and Compassion. At the very least, in faith and with good heart, a start can be made.

Buddhists are thus concerned with political action, first, in the direct relief of non-volitionally caused suffering now and in the future, and, secondly, with the creation of social karmic conditions favorable to the following of the Way that leads to the cessation also of volitionally-caused suffering, the creation of a society of a kind which tends to the ripening of wisdom and compassion rather than the withering of them. In the third place, political action, turbulent and ambiguous, is perhaps the most potent of the "action meditations."

It is perhaps because of this potency that some Buddhist organizations ban political discussion of any kind, even at a scholarly level, and especially any discussion of social action. There are circumstances in which this may be a sound policy. Some organizations and some individuals may not wish to handle such an emotionally powerful experience which may prove to be divisive and stir up bad feeling which cannot be worked upon in any positive way. This division would particularly tend to apply to "party politics." On the other hand, such a discussion may give an incomparable opportunity to work through conflict to a shared wisdom. Different circumstances suggest different "skillful means," but a dogmatic policy of total exclusion is likely to be ultimately unhelpful.

In this connection it is worth noting that any kind of social activity which leads to the exercise of power or conflict may stir up "the fires" in the same way as overtly political activity. Conflict within a Buddhist organization is cut from the same cloth as conflict in a political assembly and may be just as heady, but the Buddhist context could make such an activity a much more difficult and delusive meditation subject. The danger of dishonest collusion may be greater than that of honest collusion (to borrow one of the Ven.

Sangharakshita's aphorisms). The dogmatism and vehemence with which some Buddhists denounce and proscribe all political involvement is the same sad attitude as the dogmatism and vehemence of the politicians which they so rightly denounce.

To be lost in revolution or reform or conservatism is to be lost in //samsara// and the realm of the angry warrior, deluded by his power and his self-righteousness. To turn one's back upon all this is to be lost in an equally false idea of //nirvana// -- the realm of the gods no less deluded by spiritual power and righteousness, "You do not truly speak of fire if your mouth does not get burnt."

Effective social action on any but the smallest scale will soon involve the Buddhist in situations of power and conflict, of "political" power. It may be the power of office in a Buddhist organization. It may be the unsought for leadership of an action group protesting against the closing of an old people's day care center. It may be the organizing of a fund-raising movement to build a Buddhist hospice for care of the dying. It may be membership of a local government council with substantial welfare funds. It may be joining an illegal dissident group. In all these cases the Buddhist takes the tiger -- his own tiger -- by the tail. Some of the above tigers are bigger than others, but all are just as fierce. Hence a Buddhist must be mindful of the strong animal smell of political power and be able to contain and convert the valuable energy which power calls up. A sharp cutting edge is given into his hands. Its use we must explore in the sections which follow.

2.4 Buddhist political theory and policy

Buddhism and politics meet at two levels -- theory and practice. Buddhism has no explicit body of social and political theory comparable to its psychology or metaphysics. Nevertheless, a Buddhist political theory can be deduced primarily from basic Buddhism, from

Dharma. Secondly, it can be deduced from the general orientation of scriptures which refer explicitly to a bygone time. We have already argued, however, that this can be done only in a limited and qualified way.

Whatever form it may take, Buddhist political theory like other Buddhist "theory" is just another theory. As it stands in print, it stands in the world of the conditioned; it is of //samsara//. It is its potential, its spiritual implications, which make it different from "secular" theory. When skillfully practiced, it becomes a spiritual practice. As always, Buddhist "theory" is like a label on a bottle describing the contents which sometimes is mistaken for the contents by zealous label-readers. In that way we can end up with a lot of politics and very little Buddhism.

This is not to decry the value of a Buddhist social and political theory -- only its misuse. We have only begun to apply Buddhism as a catalyst to the general body of Western social science and most of the work so far has been in psychology. Such work in allied fields could be extremely helpful to Buddhists and non-Buddhists alike.

The writings of some Buddhists from Sri Lanka, Burma and elsewhere offer interesting examples of attempts to relate Buddhism to nationalism and Marxism (not to be confused with communism). Earlier in the century Anagarika Dharmapala stressed the social teaching of the Buddha and its value in liberating people from materialistic preoccupations. U Nu, the eminent Burmese Buddhist statesman, argued that socialism follows naturally from the ethical and social teachings of the Buddha, and another Burmese leader, U Ba Swe, held that Marxism is relative truth, Buddhism absolute truth. This theme has been explored more recently in Trevor Ling's book "Buddha, Marx and God," (2nd ed., Macmillan, London 1979) and Michal Edwarde's "In the Blowing out of a Flame" (Allen & Unwin 1976). Both are stimulating and controversial books. E.F. Schumacher's celebrated book "Small is Beautiful" (Blond & Briggs, London 1973) has introduced what he terms "Buddhist economics" and its urgent relevance to the modern world to many thousand of non-Buddhists. Of this we shall say more in a later section on the Buddhist "good society."

Buddhist social and political theory and policy can only be mentioned in passing in this pamphlet, although we have earlier introduced the idea of "social karma" as of central importance. We are, instead, concerned here with problems and questions arising in the practice of social and political work by Buddhists and the nature of that work.

2.5 Conflict and partisanship

The Buddhist faced with political thought, let alone political action, is straightaway plunged in the turbulent stream of conflict and partisanship and right and wrong.

Let the reader, perhaps prompted by the morning newspaper, select and hold in his mind some particular controversial public issue or public figure. Now, how does your Buddhism //feel//, please? (No, not what does your Buddhism //think//!) How does it feel when, again, some deeply held conviction is roughly handled at a Buddhist meeting or in a Buddhist journal? "The tears and anguish that follow arguments and quarrels," said the Buddha, "the arrogance and pride and the grudges and insults that go with them are all the result of one thing. They come from having preferences, from holding things precious and dear. Insults are born out of arguments and grudges are inseparable with quarrels." (Kalahavivada-sutta, trans. H. Saddhatissa, 1978, para. 2) Similarly, in the words of one of the Zen patriarchs: "The conflict between longing and loathing is the mind's worse disease" (Seng Ts'an, 1954).

In all our relationships as Buddhists we seek to cultivate a spirit of openness, cooperation, goodwill and equality. Nonetheless, we may not agree with another's opinions, and, in the final analysis, this divergence could have to do even with matters of life and death. But hopefully we shall be mindful and honest about how we think and, with what we feel, and how our opponent thinks and feels. In such

controversies, are we each to confirm our own ego? Or each to benefit from the other in the search for wise judgment? Moreover, in the words of the Dalai Lama, "when a person criticizes you and exposes your faults, only then are you able to discover your faults and make amends. So your enemy is your greatest friend because he is the person who gives you the test you need for your inner strength, your tolerance, your respect for others... Instead of feeling angry with or hatred towards such a person, one should respect him and be grateful to him" (Dalai Lama, 1976, p. 9). We are one with our adversary in our common humanity; we are two in our divisive conflict. We should be deluded if we were to deny either -- if we were to rush either to compromise or to uncompromising struggle. Our conflict and our humanity may be confirmed or denied at any point along that line of possibilities which links the extremes, but ultimately it will be resolved in some other, less explicit sense. Sangharakshita expresses this paradox in his observation that "it is not enough to sympathize with something to such an extent that one agrees with it. If necessary, one must sympathize to such an extent that one disagrees" (Sangharakshita, 1979, p. 60).

Zen Master Dogen advised that "when you say something to someone he may not accept it, but do not try to make him understand it rationally. Don't argue with him; just listen to his objections, until he himself finds something wrong with them." Certainly we shall need much time and space for such wisdom and compassion as may inform us in such situations. If we do fight, may our wisdom and compassion honor both our adversary and ourselves, whether in compromise, victory or defeat.

And so,

> "On how to sing
> The frog school and the skylark school
> Are arguing."
>
> -- (Shiki, 1958, p. 169)

2.6 Ambiguity, complexity, uncertainty

Our "Small Mind" clings to delusions of security and permanence. It finds neither of these in the world where, on the contrary, it experiences a sense of ambiguity, complexity and uncertainty which it finds intolerable, and which make it very angry when it is obliged to confront them. Small Mind prefers to see social, economic and political phenomena in terms of black and white, or "Left and Right." It likes to take sides, and it clings to social dogmas both sophisticated and simple. ("The rich/poor are always selfish/idle.")

To the extent that we have achieved "Big Mind" we perceive with equanimity what Small Mind recoils from as intolerable. We are freer //to see the world as it is// in all the many colors of the rainbow, each merging imperceptibly into the next. In place of clinging to a few black, white and grey compartments, scrutiny is freed, encouraged by the Buddha's discriminating and differentiating attitude. (Vibhajjavada; see Wheel: No. 238/240, Anguttara Anthology, Part II, pp. 59 ff.)

We shall not be surprised then that the personal map which guides the Wise through social and political realities may turn out to be disturbingly unconventional. Their reluctance readily to "take sides" arises not from quietism or an attachment to a compromise or a belief in the "unreality" of conflict, as is variously the case with those guided by mere rules. On the contrary, they may not even sit quietly, throwing soothing generalizations into the ring, as is expected of the religious. This seemingly uncomfortable, seemingly marginal stance simply reflects a reality which is experienced with equanimity.

However, it does not require much equanimity to discover the deeper truths which underlie many current conventional truths. Conventional politics, for example, run from "left," to "right," from radicals through liberals and conservatives to fascists. Some radicals are, for example, as dogmatic and authoritarian in practice as fascists, and to

their ultimate detriment they hate no less mightily. And, again, some conservatives are equally dogmatic because of an awareness of the subtle, organic nature of society and hence the danger of attempts at "instant" restructuring.

Similarly an ideology such as Marxism may be highly complex but has been conveniently oversimplified even by quite well educated partisans, both those "for" and those "against" the theory. The present Dalai Lama is one of those who have attempted to disentangle "an authentic Marxism" which he believes is not without relevance to the problems of a feudal theocracy of the kind that existed in Tibet, from "the sort one sees in countless countries claiming to be Marxist," but which are "mixing up Marxism and their national political interests and also their thirst for world hegemony" (Dalai Lama, 1979).

The Wise person sees clearly because he does not obscure his own light; he does not cast the shadow of himself over the situation. However, even an honest perception of complexity commonly paralyzes action with, "Yes, that's all very well, but...," "On the other hand it is also true that... ." Contemplative wisdom is a precious thing, but true Wisdom reveals itself in positive action -- or "in-action." Though a person may, through Clear Comprehension of Purpose (//satthaka-sampajanna//), keep loyal to the social ideal, his Clear Comprehension of (presently absent) Suitability may counsel in-action, or just "waiting."

In a social action situation the complexity and ambiguity to which we refer is strongly felt as ethical quandary, uncertainty as to what might be the best course of action. Even in small organizations all power is potentially corrupting; the power wielded is soon lost in a thicket of relative ethics, of means and ends confused, of greater and lesser evils, of long term and short term goals. This is not a "game." It is the terrible reality of power, wealth and suffering in the world, and the confusing of good and delusion. It cannot be escaped; it can only be suffered through. We cannot refuse life's most difficult problems because we have not yet attained to Wisdom. We simply have to do our mindful and vigilant best, without guilt or

blame. That is all we have to do.

2.7 Violence and non-violence

The First Precept of Buddhism is to abstain from taking life. But it must be made clear that the Buddhist "Precepts" are not commandments; they are "good resolutions," sincere aspirations voluntarily undertaken. They are signposts. They suggest to us how the truly Wise behave, beyond any sense of self and other.

Evil springs from delusion about our true nature as human beings, and it takes the characteristic forms of hatred, aggression and driving acquisitiveness. These behaviors feed upon themselves and become strongly rooted, not only in individuals but in whole cultures. Total war is no more than their most spectacular and bloody expression. In Buddhism the cultivation of //sila// (habitual morality) by attempting to follow the Precepts is an aspiration toward breaking this karmic cycle. It is a first step towards dissolving the egocentricity of headstrong willfulness, and cultivating heartfelt awareness of others. The Precepts invite us to loosen the grip, unclench the fist, and to aspire to open-handedness and open-heartedness. Whether, and to what extent, he keeps the Precepts is the responsibility of each individual. But he needs to be fully aware of what he is doing.

The karmic force of violent behavior will be affected by the circumstances in which it occurs. For example, a "diminished responsibility" may be argued in the case of conscripts forced to kill by an aggressive government. And there is surely a difference between wars of conquest and wars of defense. Ven. Walpola Rahula described a war of national independence in Sri Lanka in the 2nd century BC conducted under the slogan "Not for kingdom but for Buddhism," and concludes that "to fight against a foreign invader for national independence became an established Buddhist tradition, since freedom was essential to the spiritual as well as the material progress of the

community" (Rahula, 1978, p. 117). We may deplore the historic destruction of the great Indian Buddhist heritage in the middle-ages, undefended against the Mongol and Muslim invaders. It is important to note, however, that "according to Buddhism there is nothing that can be called a 'just war' -- which is only a false term coined and put into circulation to justify and excuse hatred, cruelty, violence and massacre" (Rahula, 1967, 84).

It is an unfortunate fact, well documented by eminent scholars such as Edward Conze and Trevor Ling, that not only have avowedly Buddhist rulers undertaken violence and killing, but also monks of all traditions in Buddhism. Nonetheless, Buddhism has no history of specifically //religious wars//, that is, wars fought to impose Buddhism upon reluctant believers.

Violence and killing are deeply corrupting in their effect upon all involved, and Buddhists will therefore try to avoid direct involvement in violent action or in earning their living in a way that, directly or indirectly, does violence. The Buddha specifically mentioned the trade in arms, in living beings and flesh.

The problem is whether, in today's "global village" we are not all in some degree responsible for war and violence to the extent that we refrain from any effort to diminish them. Can we refrain from killing a garden slug and yet refrain, for fear of "political involvement," from raising a voice against the nuclear arms race or the systematic torture of prisoners of conscience in many parts of the world?

These are questions which are disturbing to some of those Buddhists who have a sensitive social and moral conscience. This is understandable. Yet, a well-informed Buddhist must not forget that moral responsibility, or karmic guilt, originate from a volitional and voluntary act //affirming// the harmful character of the act. If that affirmation is absent, neither the responsibility for the act, not karmic guilt, rest with those who, through some form of pressure, participate in it. A slight guilt, however, might be involved if such participants yield too easily even to moderate pressure or do not make use of "escape routes" existing in these situations. But failure to

protest publicly against injustice or wrong-doings does not necessarily constitute a participation in evil. Voices of protest should be raised when there is a chance that they are heard. But "voices in the wilderness" are futile, and silence, instead, is the better choice. It is futile, indeed, if a few well-meaning heads try to run against walls of rock stone that may yield only to bulldozers. It is a sad fact that there are untold millions of our fellow-humans who do affirm violence and use it for a great variety of reasons (though not "reasonable reasons"!). They are unlikely to be moved by our protests or preachings, being entirely obsessed by divers fanaticisms or power urges. This has to be accepted as an aspect of existential suffering. Yet there are still today some opportunities and nations where a Buddhist can and should work for the cause of peace and reducing violence in human life. No efforts should be spared to convince people that violence does not solve problems or conflicts.

The great evil of violence is its separation unto death of us and them, of "my" righteousness and "your" evil. If you counter violence with violence you will deepen that separation through thoughts of bitterness and revenge. The Dhammapada says: "Never by hatred is hatred appeased, but it is appeased by kindness. This is an eternal truth" (I, 5) Buddhist non-violent social action (//avihimsa, ahimsa//) seeks to communicate, persuade and startle by moral example. "One should conquer anger through kindness, wickedness through goodness, selfishness through charity, and falsehood through truthfulness" (Dhammapada, XVII, 3).

The Buddha intervened personally on the field of battle, as in the dispute between the Sakyas and Koliyas over the waters of the Rohini. Since that time, history has provided us with a host of examples of religiously inspired non-violent social action, skillfully adapted to particular situations. These are worthy of deep contemplation.

Well known is Mahatma Gandhi's non-violent struggle against religious intolerance and British rule in India, and also the Rev. Martin Luther King's black people's civil rights movement in the United States. A familiar situation for many people today is the mass demonstration against authority, which may be conducted either peacefully or

violently. As Robert Aitken Roshi has observed, "the point of disagreement, even the most fundamental disagreement, is still more superficial than the place of our common life." He recalls the case of a friend who organized an anti-nuclear demonstration at a naval base passing through a small town in which virtually every household had at least one person who gained his livelihood by working at the base. Consequently, when the friend visited every single house before the demonstration he hardly expected to win the people over to his cause. But he did convince them that he was a human being who was willing to listen to them and who had faith in them as human beings. "We finally had our demonstration, with four thousand people walking through this tiny community, nobody resisted us, nobody threw rocks. They just stood and watched" (//The Ten Directions//, Los Angeles Zen Center, 1 (3) September 1980, p. 6).

And yet again, situations may arise in which folly is mutually conditioned, but where we must in some sense take sides in establishing the ultimate responsibility. If we do not speak out then, we bow only to the conditioned and accept the endlessness of suffering and the perpetuation of evil karma. The following lines were written a few days after Archbishop Oscar Romero, of the Central American republic of El Salvador, had been shot dead on the steps of his chapel. Romero had roundly condemned the armed leftist rebel factions for their daily killings and extortions. However, he also pointed out that these were the reactions of the common people being used as "a production force under the management of a privileged society... The gap between poverty and wealth is the main cause of our trouble... And sometimes it goes further: It is the hatred in the heart of the worker for his employer... If I did not denounce the killings and the way the army removes people and ransacks peasants' homes I should be acquiescing in the violence" (//Observer// newspaper (London), March 30, 1980).

Finally there is the type of situation in which the truly massive folly of the conflict and of the contrasting evils may leave nothing to work with and there is space left only for personal sacrifice to bear witness to that folly. Such was the choice of the Buddhist monks who burnt themselves to death in the Vietnam war -- surely one of the

most savage and despairing conflicts of modern times, in which an heroic group of Buddhists had for some time struggled in vain to establish an alternative "third force."

2.8 The good society

The social order to which Buddhist social action is ultimately directed must be one that minimizes non-volitionally caused suffering, whether in mind or body, and which also offers encouraging conditions for its citizens to see more clearly into their true nature and overcome their karmic inheritance. The Buddhist way is, with its compassion, its equanimity, its tolerance, its concern for self-reliance and individual responsibility, the most promising of all the models for the New Society which are an on offer.

What is needed are political and economic relations and a technology which will:

(a) Help people to overcome ego-centeredness, through co-operation with others, in place of either subordination and exploitation or the consequent sense of "righteous" struggle against all things.

(b) Offer to each a freedom which is conditional only upon the freedom and dignity of others, so that individuals may develop a self-reliant responsibility rather than being the conditioned animals of institutions and ideologies. (See "Buddhism and Democracy," Bodhi Leaves No. B. 17)

The emphasis should be on the undogmatic acceptance of a diversity of tolerably compatible material and mental "ways," whether of individuals or of whole communities. There are no short cuts to utopia, whether by "social engineering" or theocracy. The good society towards which we should aim should simply provide a means, an environment, in which different "ways," appropriate to different kinds

of people, may be cultivated in mutual tolerance and understanding. A prescriptive commonwealth of saints is totally alien to Buddhism.

(c) The good society will concern itself primarily with the material and social conditions for personal growth, and only secondarily and dependently with material production. It is noteworthy that the 14th Dalai Lama, on his visit to the West in 1973, saw "nothing wrong with material progress provided man takes precedence over progress. In fact it has been my firm belief that in order to solve human problems in all their dimensions we must be able to combine and harmonize external material progress with inner mental development." The Dalai Lama contrasted the "many problems like poverty and disease, lack of education" in the East with the West, in which "the living standard is remarkably high, which is very important, very good." Yet he notes that despite these achievements there is "mental unrest," pollution, overcrowding, and other problems. "Our very life itself is a paradox, contradictory in many senses; whenever you have too much of one thing you have problems created by that. You always have extremes and therefore it is important to try and find the middle way, to balance the two" (Dalai Lama, 1976, pp. 10, 14, 29).

(d) E.F. Schumacher has concisely expressed the essence of Buddhist economics as follows:

> "While the materialist is mainly interested in goods, the Buddhist is mainly interested in liberation. But Buddhism is 'The Middle Way' and therefore in no way antagonistic to physical well-being... The keynote of Buddhist economics is simplicity and non-violence. From an economist's point of view, the marvel of the Buddhist way of life is the utter rationality of its pattern -- amazingly small means leading to extraordinarily satisfying results" (Schumacher, 1973, p. 52).

Schumacher then outlines a "Buddhist economics" in which production would be based on a middle range technology yielding on the one hand an adequate range of material goods (and no more), and on the other a

harmony with the natural environment and its resources. (See also Dr. Padmasiri de Silva's pamphlet //The Search for a Buddhist Economics//, in the series, Bodhi Leaves, No. B. 69)

The above principles suggest some kind of diverse and politically decentralized society, with co-operative management and ownership of productive wealth. It would be conceived on a human scale, whether in terms of size and complexity of organization or of environmental planning, and would use modern technology selectively rather than being used by it in the service of selfish interests. In Schumacher's words, "It is a question of finding the right path of development, the Middle Way, between materialist heedlessness and traditionalist immobility, in short, of finding 'Right Livelihood.'"

Clearly, all the above must ultimately be conceived on a world scale. "Today we have become so interdependent and so closely connected with each other that without a sense of universal responsibility, irrespective of different ideologies and faiths, our very existence or survival would be difficult" (Dalai Lama, 1976, pp. 5, 28). This statement underlines the importance of Buddhist internationalism and of social policy and social action conceived on a world scale.

The above is not offered as some kind of blueprint for utopia. Progress would be as conflict-ridden as the spiritual path of the ordinary Buddhist -- and the world may never get there anyway. However, Buddhism is a very practical and pragmatic kind of idealism, and there is, as always, really no alternative but to try.

2.9 Organizing social action

A systematic review of the different kinds of Buddhist organization for social action which have appeared in different parts of the world is beyond the scope of this pamphlet. Some considerable research would be required, and the results would merit at least a separate pamphlet.

Later we shall introduce three contrasting movements which are in some sense or others examples of Buddhist social action. Each is related more or less strongly to the particular social culture in which it originated, and all should therefore be studied as illustrative examples-in-context and not necessarily as export models for other countries. They are, however, very suggestive, and two of the three have spread beyond their country of origin.

2.9a Maintaining balance

Social action needs to be organized and practiced in such a way as to build upon its potential for spiritual practice and to guard against its seductions. Collective labor with fellow-Buddhists raises creative energy, encourages positive attitudes and engenders a strong spirit of fellowship. The conflicts, disagreements, obstacles, and discouragements which will certainly be met along the way offer rich meditation experiences and opportunity for personal growth, so long as scrupulous mindfulness is sustained.

The meditator will learn as much about himself in a contentious meeting as he will in the meditation hall. Both kinds of experience are needed, and they complement one another. Social action is a great ripener of compassion (for self as well as for others), out of the bitterness of the experiences which it commonly offers. Yet, like nothing else, it can stir up the partisan emotions and powerfully exult the opinionated ego. The busy, patronizing evangelist not only gives an undercover boost to his own ego; he also steals another person's responsibility for himself. However, these dangers are, comparatively speaking, gross and tangible when set against the no less ego-enhancing seduction of Other-Worldliness and dharma-ridden pietism. Such "spiritual materialism," as Chogyam Trungpa calls it, has long been recognized as the ultimate and most elusive kind of self-deception which threatens the follower of the spiritual path.

The seduction lies in being carried away by our good works, in becoming subtly attached to the new goals and enterprises we have set ourselves, so that no space is left in our busily structured hours in which some saving strength of the spirit can abide. Here is opportunity to learn how to dance with time -- "the river in which we go fishing," as Thoreau called it, instead of neatly packaging away our lives in it, or letting it dictate us. And in committee lies the opportunity of slowly turning the hot, lusty partisanship of self-opinionated confirmation into the kind of space and dialogue in which we can communicate, and can even learn to love our most implacable opponents.

It is therefore important that both the individual and the group set aside regular periods for meditation, with periods of retreat at longer intervals. It is important also that experience and the feel of the social action project should as far as possible be shared openly within the Buddhist group.

In our view, the first social action of the isolated Buddhist is not to withhold the Dharma from the community in which he or she lives. However modest one's own understanding of the Dharma, there is always some first step that can be taken and something to be learned from taking that step. Even two or three can be a greater light to one another, and many forms of help are often available from outside such as working together through a correspondence course, for example, or listening to borrowed audiocassettes.

For the reasons given earlier it is important that social action projects should, where possible, be undertaken by a Buddhist //group// rather than each individual "doing his own thing." And since the Buddhist group will, in most Western countries, be small and isolated, it is important that the work be undertaken in co-operation with like-minded non-Buddhists. This will both use energies to better effect since social action can be very time- and energy-consuming, and create an even better learning situation for all involved. Forms of social action which are high on explicit giving of service and low on conflict and power situations will obviously be easier to handle and

to "give" oneself to, though still difficult in other respects. For example, organizing and participating in a rota of visits to lonely, long-stay hospital patients would contrast, in this respect, with involvement in any kind of local community development project.

2.9b Spiritual centers: example and outreach

In this section we are concerned with the significance of Buddhist residential communities both as manifestations and examples of the "good society" and as centers of social outreach (mainly, though not solely, in the form of teaching the Dharma). We may distinguish four possible kinds of activity here.

In the //first// place, any healthy spiritual community does, by its very existence, offer to the world a living example not only of the Good Life but also of the Good Society. Certain spiritual values are made manifest in its organization and practice in a way not possible in print or in talk. On the other hand, the purely contemplative and highly exclusive community can do this only in some limited, special and arguable sense.

In the //second// place, where the members of such a community undertake work as a community economically ("Right Livelihood"), then to that extent the community becomes a more realistic microcosm of what has to be done in the wider world and a more realistic model and example of how it might best be done.

//Thirdly//, such communities are commonly teaching and training communities. This may be so in formal terms, in that they offer classes and short courses and also longer periods of training in residence, in which the trainees become veritable community members. And it may be true in terms of the "openness" of the community to outsiders who wish for the present to open up their communication with the community through some participation in work, ritual, teaching,

meditation.

//Fourthly//, the community might involve itself in various kinds of outside community service, development or action beyond that of teaching, and beyond the necessarily commercial services which may sustain the community's "Right Livelihood." Examples might be running a hospice for the terminally ill, providing an information and advice center on a wide range of personal and social problems for the people of the local community, and assisting -- and maybe leading -- in various aspects of a socially deprived local community. The spiritual community thus becomes more strongly a community within a community. In this kind of situation would the spiritual community draw strength from its service to the social, the "lay" community, creating an upward spiral of energy? Or would the whole scheme founder through the progressive impoverishment and corruption of the spiritual community in a vicious downward spiral?

In the Eastern Buddhist monastic tradition the first and third aspects (above) are present. In contrast to Christian monasticism, monks are not necessarily expected to be monks for life, and the monasteries may have an important function as seminaries and as long and short stay teaching and training centers. On the other hand, economically such communities are commonly strongly sustained by what is predominantly Buddhist society. In the West there are now similar communities in all the main Buddhist traditions. Although these are to some extent sustained also by lay Buddhist contributions, their income from training and teaching fees may be important. And whether it is or not, it is clear that their actual and potential training and teaching role is likely to be very important in non-Buddhist societies in which there is a growing interest in Buddhism. A good example is the Manjusri Institute in the United Kingdom, which is now seeking official recognition for the qualifications which it awards, and which could eventually become as much part of the national education system as, say, a Christian theological college. Such an integration of Buddhist activity into the pattern of national life in the West is, of course, most welcome, and opens up many new opportunities for making the Dharma more widely understood.

The above developments may be compared with the communities which form the basis of the Friends of the Western Buddhist Order (FWBO). In these, our second aspect (above), that of Right Livelihood, is found, in addition to the first and third.

The FWBO was founded in 1967 in the United Kingdom by the Ven. Maha Sthavira Sangharakshita, a Londoner who spent twenty years in India as a Buddhist monk and returned with the conviction that the perennial Buddhism always expresses itself anew in each new age and culture. The FWBO is concerned with building what it calls the "New Society" in the minds and practice of its members. Opening the FWBO's London Buddhist Center, Ven. Sangharakshita was reported as saying that the New Society was a spiritual community composed of individuals who are "truly human beings: self-aware, emotionally positive people whose energies flow freely and spontaneously, who accept responsibility for their own growth and development, in particular by providing three things: firstly, a residential spiritual community; secondly, a co-operative Right Livelihood situation; and thirdly a public center, offering classes, especially in meditation" (Marichi, 1979).

The FWBO does in fact follow a traditional Mahayana spiritual practice, but within this framework it does have, as the quotation above suggests, a strong Western flavor. This owes much to the eleven co-operatives by which many of the eighteen autonomous urban communities support themselves. These businesses are run by teams of community members as a means of personal and group development. They include a printing press, graphic design business, photographic and film studio, metalwork forge, and shops and cafes.

Membership of the communities (which are usually single sex), varies between four and thirty people, and often the community members pool their earnings in a "common purse." The FWBO comprises Order members, Mitras (who have made some initial commitment) and Friends (supporters in regular contact). Each community is autonomous and has its own distinctive character. Attached to communities are seven Centers, through which the public are offered talks, courses and instruction in meditation. Regular meetings of Chairmen of Centers and other senior Order members, supported by three central secretariats, are planned

for the future, but it is not intended to abridge the autonomy of the constituent communities, each of which is a separately registered legal body.

The FWBO is growing very rapidly, not only in the United Kingdom but also overseas, with branches in Finland, the Netherlands, New Zealand, Australia, the USA, and, interestingly, in India, where a sustained effort is being made to establish centers.

2.9c Community services and development

We refer in this section to the fourth aspect distinguished early in the previous section 2.9b, namely, various possible kinds of service and support which may be given by organized Buddhists to the local community in which they live. The FWBO does not undertake this kind of activity (see previous section for examples), and in fact there do not appear to be any //major// examples of it in the West.

Arguably if this kind of work is undertaken at all, it might more likely be initiated by a non-residential "lay" Buddhist group, whose members as householders and local workers may have strong roots in their town or neighborhood. As an example of what can be achieved by a relatively small group of this kind, we quote the following (from //The Middle Way//, 54 (3) Autumn 1979, p. 193):

> "The Harlow Buddhist Society have recently opened Dana House, a practical attempt to become involved with the ordinary people of the town and their problems. The new center ... has four regular groups using it. The first is an after-care service for those who have been mentally or emotionally ill. The center is there for those in need of friendship and understanding. The second group is a psychotherapy one, for those with more evident emotional problems. It is run by an experienced group leader and a psychologist who can be consulted privately. The third group

is a beginners' meditation class based on the concept of 'Right Understanding.' The fourth group is the Buddhist group, which is not attached to any particular school of Buddhism.

"Peter Donahoe writes: 'We have endeavored to provide a center which can function in relation to a whole range of different needs, a place of charity and compassion, where all are welcomed regardless of race, colour, sex or creed, welcomed to come to terms with their suffering in a way which is relative to each individual.'"

However, on the whole, it is only in the East, in societies in which Buddhist culture is predominant or important, that there are sufficiently committed Buddhists to play a part in extensive community service and development projects. For example, in Japan there are several such movements and we shall refer in the next section to one example -- Soka Gakkai, a movement which also plays a number of other roles. We must first, however, turn our attention to a pre-eminent example of a Buddhist-inspired movement for community development, the Sarvodaya Shramadana Movement of Sri Lanka.

"Sarvodaya" means "awakening of all" and "Shramadana" means "sharing of labor," making a gift of time, thought and energy. This well describes what is basically a village self-help movement, inspired by Buddhist principles and founded in 1958 as part of a general national awakening. It is now by far the largest non-governmental, voluntary organization in Sri Lanka.

The Movement learned in its earlier days how very important non-economic factors are in community development, and its projects combine spiritual-cultural with socioeconomic development. "One important element that cannot be improved upon in Buddhist villages in particular is the unique place of the temple and the Buddhist monk, the one as the meeting place, the other as the chief exponent of this entire process." (All quotations are from the pamphlet //Ethos and Work Plan//, published by the Movement.) Founded on traditional culture, Sarvodaya Shramadana is ultimately "a nonviolent

revolutionary movement for changing man and society." At the same time it aims to retain the best in the traditional social and cultural fabric of the community.

Village development projects are undertaken on the initiative of the villagers themselves. To begin with the community is made aware of the historic causes that led to the impoverishment and disintegration of the community and of its cultural and traditional values. Economic regeneration is only possible if there is a restoration of social values within the village. It is emphasized that the community itself must take the initiative in removing obstacles to development and in learning the new skills needed to carry through a change of program. The volunteers brought in to help serve only as a catalyst. Action is focused initially on Shramadana Camps in which villagers and outside volunteers work together upon some community project such as a road or irrigation channel. The experience of such Camps helps to develop a sense of community. Local leaders, working through village groups of farmers, of youth, of mothers and others, emerge to take increasing responsibility for a more or less comprehensive development program. This may include pre-school care for the under-fives, informal education for adults, health care programs, and community kitchens, with co-operation with State agencies as appropriate. By 1980, Sarvodaya was reaching 3,500 villages and was running 1,185 pre-schools.

Essential to these community development programs in Sarvodaya Shramadana's system of Development Education programs, operating through six Institutes and through the Gramodaya centers each of which co-ordinates development work in some twenty to thirty villages. The movement also provides training in self-employment for the youth who compose the largest sector of the unemployed. Although the main thrust of activity has been in rural areas, the Movement is also interested in urban community development where conditions are favorable and there is local interest.

The main material support for the movement comes from the villagers themselves, although financial and material assistance has also been received from overseas.

It is argued that the basic principles of Sarvodaya Shramadana can be adapted to developed as well as developing countries, and Sarvodaya groups are already active in West Germany, the Netherlands, Japan and Thailand. "The rich countries also have to helped to change their purely materialistic outlook and strike a balance, with spiritual values added to the materialistic values of their own communities so that together all can build a new One World social order."

2.9d Political action and mass movements

Although there may be exceptional circumstances in certain countries, as a general rule there are strong arguments against Buddhist groups explicitly aligning themselves with any political party. It is not just that to do so would be irrelevantly divisive. As we have noted in section 2.6 (above), there are deeper, underlying social and political realities which cross-cut the conventional political spectrum of left, right and center.

Nevertheless, Buddhism, like other great religious systems, inevitably has political implications. To some extent these seem to be relatively clear, and in other senses they are arguable and controversial. Religion has its own contribution to make to politics and, ultimately, it is the only contribution to politics that really matters. It has failed both politically and as religion it falls either into the extreme of being debased by politics or of rejecting any kind of political involvement as a kind of fearful taboo. The fear of creating dissension among fellow Buddhists is understandable, but if Buddhists cannot handle conflict in a positive and creative way, then who can?

On closer examination we shall find that it is not "politics" that requires our vigilance so much as the problems of power and conflict inherent in politics. Indeed, a better use of the term "political" would be to describe any kind of power and conflict situation. In this

sense a Buddhist organization may be more intensely and unhappily "political" in managing its spiritual and practical affairs than if and when its members are discussing such an "outside" matter as conventional politics. Indeed, any such discussion of social and political questions may be banned by a Buddhist society which may be in fact intensely political in terms of underlying power and conflict with which its members have not really come to terms. All kinds of organizations have problems of power and conflict and derive their positive dynamism from the good management of these, but the dangers of self-delusion seem to be greater in religious bodies.

When we meet Buddhists and get to know them, we find that even when they do not express explicit opinions on political and social matters, it is clear from other things they say that some are inclined to a conservative "establishment" stance, some are of a radical inclination, and others more dissident still. Since the diversities of THIS and THAT exist everywhere else in the conditioned world, even Buddhists cannot pretend to exclude themselves from such disturbing distinctions. This is not really in question. What is in question is their ability to handle their differences //openly// and with Buddhist maturity. And, as we have tried to show earlier, this maturity implies a progressive diminution of emotional attachment to views of THIS and THAT, so that we no longer need either in order to sustain our identity in the world and have in some sense transcended our clinging by a higher understanding. We still carry THIS or THAT, but lightly and transparently and manageably -- without ego-weight. If we did not still carry them, how could we feel the Compassion for //samsara//, for ourselves as well as others?

Alan Watts wrote a suitably controversial little pamphlet on this subject, entitled //Beat Zen, Square Zen and Zen// (City Lights Books, San Francisco, 1959). The following passage may be found helpful to our present discussion; what the author has to say about Zen is surely no less applicable to Buddhism as a whole. Watts argues that the Westerner who wishes to understand Zen deeply "must understand his own culture so thoroughly that he is no longer swayed by its premises unconsciously. He must really have come to terms with the Lord God Jehovah and with his Hebrew-Christian conscience so he can take it or

leave it without fear or rebellion. He must be free of the itch to justify himself. Lacking this, his Zen will be either 'beat' or 'square,' either a revolt from the culture and social order or a new form of stuffiness and respectability. For Zen is above all the liberation of the mind from conventional thought and this is something utterly different from rebellion against convention, on the one hand, or adapting foreign conventions, on the other."

In the West, individual Buddhists have been particularly attracted to pacifist, disarmament, and environmentalist movements and parties. These movements have profound concerns, which, arguably, undercut the expediencies of conventional party politics. On the other hand, are they not made the more attractive by a certain political innocence, as yet uncorrupted and unblessed by the realities of power? And do they not also underestimate the karma of power and property?

However, in Western and other non-Buddhist countries Buddhist political action of any kind is little more than speculative. Buddhists are few in number, and their energies are necessarily fully occupied with learning and teaching. Teaching is the major form of social action and we have already discussed certain social action implications of the spiritual community. Social action at most verges upon certain possible kinds of service to the wider community or even participation in community development. We have already suggested the merit of such enterprises. But as to politics, using the word conventionally, in the West and at the present time, that can be no more than a matter for //discussion// in Buddhist groups. As always, individual Buddhists and perhaps informal groups will decide for themselves about political //action// or inaction.

However, in countries where there are strong Buddhist movements, well rooted in society, some kind of political stance and action seems unavoidable and, indeed, logical and natural, though conventional party political alignments may generally be avoided.

For example, Sarvodaya Shramadana's success at the higher levels of village self-development depends on "the extent that unjust economic arrangements such as ownership of means of production, e.g., land in

the hands of a few, administrative system and political power structures, are changed in such a way that the village masses become the true masters of their own selves and their environment. That the present government has gone very far in this direction is amply demonstrated when one examines the radical measures that have already been taken" (Sarvodaya Shramadana pamphlet //Ethos and Work Plan//, p. 31).

For large and explicitly Buddhist movements filing a variety of different roles, from the devotional to the so-called "New Religions" which have become particularly important in Japan in the post-war period. (Some mention has already been made of the small discussion groups which are a notable feature of Rissho-Kosei-Kai -- The "Society for Establishing Righteousness and Family Relations".) With their strong emphasis on pacifism, brotherly love, and mutual aid, these organizations have done much to assist the recovery of the Japanese people from the trauma of military aggression and the nuclear explosions which terminated it.

Soka Gakkai (literally, "Value Creation Society") is perhaps the most striking of these Japanese Buddhist socio-political movements. It is a lay Buddhist organization with over fifteen million adherents, associated with the Nichiren-Sho-Shu sect.

Soka Gakkai has an ambitious education and cultural program, and has founded its own university, high school and hospital. It also has a political party, Komeito -- the "Clean Government Party," which as early as 1967 returned twenty-five parliamentary candidates to the Japanese lower house, elected with five percent of the national vote. The party has continued to play an important part in Japanese political life, basing itself on "the principles of Buddhist democracy" and opposition to rearmament. Soka Gakkai is a populist movement, militant, evangelical and well organized, pledged to "stand forever on the side of the people" and to "devote itself to carrying out the movement for the human revolution" (President Daisaku Ikeda). More specifically, its political achievements have included a successful confrontation with the mineowners of Hokkaido.

Attitudes to Soka Gakkai understandably differ widely. It has been criticized by some for its radicalism and by others for its conservatism; certainly it has been criticized on the grounds of dogmatism and aggressiveness. Certainly it is imbued with the nationalist fervor of Nichiren, the 13th century Buddhist monk who inspired it. Although it has some claims to missionary work in other countries, Soka Gakkai appears to have a more distinctive national flavor than the other social action groups we have looked at and to be less suitable for export.

2.9e "Universal Responsibility and the Good Heart"

Elsewhere we have already quoted the words of the Dalai Lama emphasizing the active global responsibility of Buddhists, and the importance above all of what he calls "Universal Responsibility and the Good Heart." In all countries will be found non-Buddhists, whether religionists or humanists, who share with us a non-violent, non-dogmatic and non-sectarian approach to community and world problems, and with whom Buddhists can work in close cooperation and with mutual respect. This is part of the "Good Heart" to which the Dalai Lama refers. "I believe that the embracing of a particular religion like Buddhism does not mean the rejection of another religion or one's own community. In fact it is important that those of you who have embraced Buddhism should not cut yourself off from your own society; you should continue to live within your own community and with its members. This is not only for your sake but for others' also, because by rejecting your community you obviously cannot benefit others, which actually is the basic aim of religion" (Dalai Lama, 1976).

Mr. Emilios Bouratinos and his colleagues of the Buddhist Society of Greece have framed certain farsighted proposals for the "rehumanization of society" which have Buddhist inspiration but which seek to involve non-Buddhist ideological groups with the aim of

reaching some common ground with them on the organization of society. Mr. Bouratinos argues that Buddhists should address themselves "to all people somehow inspired from within -- whether they be religionists or not. This is indispensable, for we Buddhists are a tiny minority in the West and yet we must touch the hearts of many if this world is to survive in some meaningful fashion" (Letter to the author, 15 May 1980).

* * *

CONCLUSION

Certainly in the West many Buddhists will maintain that it is necessary to take one step at a time, and that for the present our individual and collective action must go into the inner strengthening of our faith and practice. They would doubtless agree on the importance of teaching the Dharma, which we have characterized as one of the important forms of social action, but they would argue that the seduction of other kinds of social action, and the drain of energy, are greater than the opportunities which it can afford for "wearing out the shoe of //samsara//." They would argue that the best way to help other people is by personal example.

This pamphlet concedes some possible truth to the above position but also offers a wide range of evidence to the contrary, to which in retrospect the reader may now wish to return. Whatever we may feel about it, certainly the debate is a worthwhile one since, as we have seen, it points to the very heart of Buddhism -- the harmony, or creative equilibrium, of Wisdom and Compassion. And as in all worthwhile debates, the disagreement, and, still more, the possible sense of disagreeableness which it engenders, offers each of us a valuable meditation.

The needs and aptitudes of individual differ, and our debate will also

appear differently to readers in different countries with different cultural backgrounds. Though we are brothers and sisters to one another, as Buddhists each must light his or her own way. To the enquiring reader who has little knowledge of Buddhism and yet who has managed to stay with me to the end, I offer my apologies if I have sometimes seemed to forget him and if my explanations have proved inadequate. For

> "This is where words fail: for what can words tell
> Of things that have no yesterday, tomorrow or today?"
>
> -- Tseng Ts'an

To a world knotted in hatreds and aggression and a host of follies, grand and mean, heroic and base, Buddhism offers a unique combination of unshakable equanimity and a deeply compassionate practical concern. And so may we tread lightly through restless experience, riding out defeats and discouragements, aware always of the peace at the heart of things, of the freedom that is free of nothing.

THE BUDDHIST PUBLICATION SOCIETY

The BPS is an approved charity dedicated to making known the Teaching of the Buddha, which has a vital message for people of all creeds. Founded in 1958, the BPS has published a wide variety of books and booklets covering a great range of topics. Its publications include accurate annotated translations of the Buddha's discourses, standard reference works, as well as original contemporary expositions of Buddhist thought and practice. These works present Buddhism as it truly is -- a dynamic force which has influenced receptive minds for the past 2500 years and is still as relevant today as it was when it first arose. A full list of our publications will be sent upon request with an enclosure of U.S. $1.00 or its equivalent to cover air mail postage.

THE PERSON THE BUDDHA WOULD NOT ADMONISH

by Sayagyi U Chit Tin

At one time, in a conversation with a horse-trainer named Kesi, the Buddha asked him how he trained his horses.[1] Kesi[2] replied that he used mildness, harshness, and a combination of the two.[3] Next, the Buddha asked what Kesi did with a horse that would not submit to his training. "I destroy him," Kesi answered, explaining that he did not wish for such a horse to be a discredit to his teacher's clan.

Then Kesi remarked that the Buddha was the unsurpassed trainer of men. How did he train men?

The Buddha replied that he too used mildness, harshness and a combination of the two. By mildness, the Buddha explained that he meant training through good conduct of body, speech and thought with the good results of each, leading on to rebirth as a Deva or a human being. By harshness the Buddha meant showing bad conduct of the body, speech and thought and the results of each, leading on to rebirth as an animal or a wandering ghost (peta). The combination of the two was also possible.

We can infer from this that some people only need to be shown the positive way of acting and the good that results, some only need to see the results of bad actions, while others need to see both sides before they submit to training.

Kesi asked the Buddha what he would do if someone did not submit to any of these methods. "In such a case, Kesi, I destroy him," the Buddha replied. Kesi was understandably surprised by this answer. It was one thing for him, a mere horse trainer, to destroy a recalcitrant horse, but for the Buddha to destroy someone was unthinkable. "But surely the Blessed One does not take life!" he exclaimed.

"Kesi," the Buddha replied, "it is true that taking life does not become a Tathagata (Buddha). Yet, if the man to be trained does not submit

to the training by mildness, by harshness or both together, then the Tathagata does not think it worthwhile to admonish that man, nor do his wise companions in leading the holy life (brahmacariya) think it worthwhile to admonish that man. This, Kesi, is destruction for a man in the noble discipline: when both the Tathagata and his companions in leading the holy life do not think it worthwhile to admonish him."

The method mentioned here can be taken as part of the first step involving the motivation for a person ready for training. It is necessary to have the right view that volitional actions will give future results, that other planes of existence actually exist and that our good or bad acts will lead to birth in a good or bad plane respectively. If this is true, then a person will be motivated to work for a good existence at the very least. This matter of right belief is so important it is the subject of the first discourse in the Sutta Pitaka.

The Buddha does not mention to Kesi that working for a good existence is not enough, that the goal should be the ending of all future births. This is probably because Kesi was not ready at that time to aim at the highest goal. An illustration of how the Buddha initially motivated some people to work for a good existence is found in his discourse to the Kalamas[4] and also in the way he taught his half-brother Nanda.[5] Nanda became a bhikkhu just after being married and soon began to long to return to lay life. The Buddha showed him the pleasures of the Deva worlds to help him get rid of his longing for the pleasures of the human world, knowing that as he worked to attain temporary pleasures Nanda would be able to go beyond them and attain Nibbana. This can serve as an example of training with mildness.

In a very different case the Buddha used the harsh training. An actor name Talaputa had been told that through entertaining people he would be reborn in the world of the laughing devas.[6] When he sought to confirm this by asking the Buddha, the Buddha at first remained silent. This shows that the Buddha was careful not to tell people something if it would only serve to upset and depress them. Talaputa had to ask three times before the Buddha explained that an actor who provoked immoral thoughts in his audience would be reborn in a lower realm. And this knowledge motivated Talaputa to become a bhikkhu and work for true

happiness.

In many places it is made clear that the Buddha only taught those who would follow his instructions, but that he also gave people every chance to see the error of their ways. A good example is the case of the quarreling bhikkhus of Kosambi[7]. Due to a misunderstanding concerning the rules, two factions of bhikkhus refused to listen to the advice of the Buddha. It was only when he saw that he could not resolve the conflict that the Buddha left the bhikkhus. When they finally came to their senses, the Buddha advised the bhikkhus with him and the lay followers who asked how to act towards the two factions: they should continue to act correctly towards both sides, but not get involved in the dispute. The conflict was eventually resolved when the bhikkhu who had broken one of the minor rules confessed his fault. But it is important to note that both sides in the argument were guilty of wrong speech in their quarreling and they almost lost contact with the Buddha because of that. They were almost destroyed. As Ven. Sariputta said, a bhikkhu who lacks respect for the Teacher cannot have respect for the Dhamma and Sangha.[8]

The Buddha is described as having compassion and loving kindness for all living beings. Even Devadatta, who had tried to kill the Buddha, realized at the end of his life that the Buddha had not cherished so much as the tip of a hair's hatred towards him.[9] If this is so, how could the Buddha turn his back on someone? We have all probably seen cases of people in difficulty who refuse to see the solution to their problem. We may have tried to help them, only to find that all our efforts were in vain. Instead of helping the other person, we might find ourselves being dragged down by them. If we realize that we are unable to help someone, then we would do better to avoid them entirely, just as the Buddha left the bhikkhus of Kosambi. The best response to someone who only wants to quarrel or stir up trouble is silence. We cannot help someone who is not ready to help himself. This is what the Buddha meant when he said that he only showed the way. He could not enlighten anyone else. But if they were ready to follow his instructions, he could show them the way to reach Nibbana by their own efforts.

It is not always easy for us to know whether we can be helpful or not to another person. A Buddha can see better than anyone else the

potential a person has. Some indications of the qualities a person who can be helped will possess can be obtained from the description of the dedicated student of meditation in the Visuddhimagga:[10]if he dedicates himself to the teacher, he will be responsive to correction, he will not go about as he likes, he will be easy to speak to and will live only in dependence on the teacher. If the bhikkhus at Kosambi had had this sort of attitude, they would have stopped their quarreling the first time the Buddha corrected them.

At times, of course, a person can only learn by his own mistakes. A good example of such a person was Ven. Meghiya, who was one of the Buddha's attendants before Ven. Ananda. He insisted on meditating in a grove where he was unable to make progress.[11] But realizing his mistake, he approached the Buddha and asked him about it. The result was that the Buddha gave him very thorough instructions for his meditation, and Meghiya was finally able to make progress. If we are aware that we have gone down the wrong path, then we should come back before it is too late. If we encounter others who have fallen into error, but who sincerely wish to begin again, and work properly, then, like the Buddha, we should welcome the opportunity to help them if we can.

The Buddha explains very plainly, "This, Kesi, is destruction for a man in the discipline of the Ariyan--when both the Tathagata and his fellows in the higher life think it not worth while to admonish him!"

When our teacher Sayagyi U Ba Khin was living and teaching at the International Meditation Centre, Yangon, Myanmar, there were many occasions when he would train by mildness with sweet and gentle speech, and good food, and also by harshness with firm, strong words -- sometimes very stern words -- and also by both mildness and harshness. At such times we were at a loss to understand but always knew that his loving-kindness was so great that he could not help but follow in the foot-steps of the Buddha.

"Destroyed indeed is a person by the Teacher when he would not admonish the unfortunate person!"

So those who wish to lead a higher life should submit to the

admonition of our teachers who are wise and who with much loving-kindness show us the Right Path, the Path to Liberation.

Hence, let all beware!

Sayagyi U Chit Tin

FOREWORD
~~~~~~~~

The following pages were originally intended as new sections to be added to the second edition of my introductory book on the Dhamma, //What is Buddhism?//. However, as many people are greatly interested in the practice of meditation, and as many are also separated from the sources of a living tradition, it is hoped that the following may be of value even apart from the sections of the book which they supplement.

When we consider meditation, we cannot stress too much the importance of having the right reasons for taking it up. Meditation -- or, as a better translation of //samadhi//, collectedness -- is only one aspect of Buddhist practice, and //must//, to be successful, //go hand in hand// with such other practices as generosity, gentleness, nonviolence, patience, contentment and humility. If such genuine qualities of the Dhamma neither exist in oneself initially, nor grow through one's practice, then something is drastically wrong, and only a foolhardy person will try to proceed. The practice of collectedness is based upon firm roots of virtue (//sila//) and cannot succeed in anyone who does not make a real effort to be strict in keeping the precepts.

The signs of "progress" in collectedness are not strange visions, peculiar feelings and the like (though it is conceivable that these may arise also where progress is achieved), but rather an all-round and harmonious growth in the way of Dhamma. If one is without a teacher then one has to be doubly vigilant, otherwise one will never become aware whether one of Mara's distractions is likely to succeed, or whether one does in fact tread the Middle Practice-Path.

This essay is an extract from //Buddhism Explained//, the second edition (revised and enlarged) of the book formerly known as //What is Buddhism?//, published by The Social Science Press of Thailand, Phya
~~~~~~~~

Thai Road, Chula Soi 2, Bangkok.

* * *

TWO STREAMS IN MEDITATION

Two apparently distinct streams of Buddhist meditation may be discerned, though when meditation is established, these are seen to be complementary.

It may be profitable for some people whose minds are very active and who suffer from distraction, to follow with mindfulness the mad monkey-mind's acrobatics. As the mind is really a series of mental events which arise and pass away with incredible rapidity, each of which is a mind complete with supporting mental factors, so at the beginning this kind of mindfulness is really one "mindful" mind watching other "minds" (which are all within one's own mental continuity of course). One thereby develops the ability to look into the mind and to see where it has gone to. Has it gone to the past, present or future? Has it gone to materiality, or to feelings, or perhaps to cognitions, to volitional activities, or has it gone to consciousness? By this method of "Where has it gone?", the distracted mind slowly comes under the surveillance of the mindful mind, until mindfulness forms a strong foundation for further development. Considerable, though mundane, brilliance of mind is both needed and developed by this practice, which however should be balanced by the tranquility of the absorptions. When the mind has become calm, one should start to practice for the absorptions (//jhana//), which will in their turn be the basis for the arising of real insight. This method is called "wisdom leading to calm."

Other methods suited to those whose minds are less disturbed initially, include the classic forty subjects of meditation (see Appendix); and these, together with more developed types of meditation practice, involve the use of a definite object for concentration. This may be one's own body or a part of it, a colour or a picture, a word or a phrase, or abstract contemplation and so forth. All these methods involve some firm but gentle discipline of the mind, in that each time it strays away, it must be gently brought back again (by mindfulness, of course) to concentrate again on the chosen subject.

Some people have the quite mistaken idea that practice of this sort must necessarily lead to tranquility almost at once. They may be surprised when beginning to practice themselves, since they actually experience more troubles than they had previously. This is firstly, because they never before really looked into their mind to know the state it has always been in; and secondly, because having taken up a discipline of the mind, it is as though one stirs up with a stick a stagnant pond, or pokes with a stick a fire smoldering under ashes. The wild elephant of the mind, long accustomed to roam in the jungle of desires, does not take readily to taming, or to being tied to the post of practice with the thongs of mindfulness. However, diligence and heedfulness will eventually win for one the fruits of tranquility.

All these forty subjects are of this second type in which the calm gained from practice is then used for the arousing of wisdom. They are for this reason called "calm-leading-to-wisdom" methods, and are very important in the present distracted age. For their full explanation one should consult the //Path of Purification// (//Visuddhi-magga//, translation), although even the great learning in that book cannot replace the personal contact with a teacher.

* * *

PRACTICAL ADVICE FOR MEDITATORS

Turning from the psychological to the practical aspect, meditation for laypeople may be divided into two categories: that which is done intensively, and that which one practices while going about one's daily life. The meditation practiced intensively is also of two sorts: regular daily sitting, and occasional retreat practice.

Regular Daily Sitting

We shall first discuss the regular daily period of intensive sitting which should, where possible, be made every day at the same time. One should guard against its becoming a ritual by earnestness and by being intensely aware of why one had undertaken it. The following suggestions may be found helpful as well.

As to material considerations, the place for meditation should be fairly quiet. If one has a small room which can be used for this purpose, so much the better, and in any case, it is better to meditate alone, unless other members of the household also practice. Where this latter is the case one should make sure that one's mind is pure also in relation to others, for otherwise greed, hatred, and the rest of the robber gang are sure to steal away the fruits of meditation.

Quietness is best obtained by getting up early before others rise; and this is also the time when the mind is clear and the body untired. The sincere meditator therefore keeps regular hours, for he knows how much depends on having just enough sleep to feel refreshed.

After rising and washing one should sit down in clean loose clothing in the meditation place. One may have a small shrine with Buddhist symbols, but this is not essential. Some people find it useful to begin by making the offerings of flowers, incense, and light, carefully reflecting while doing so. It is very common in

Buddhist countries to preface one's silent meditation by chanting softly to oneself, "Namo tassa bhagavato arahato samma-sambuddhassa," with the Refuges and Precepts. If one knows the Pali passages in praise of the Buddha, Dhamma and Sangha, these may also be used at this time. [*]

* [See //The Mirror of the Dhamma//, WHEEL No. 54 a/b.]

Another useful preliminary is a reflection, a discursive recitation, of some truths of the Dhamma, such as the passage suggested below:

"Having this precious opportunity of human birth, I have two responsibilities in the Dhamma: the benefit of myself and the benefit of others. All other beings, whether they be human or non-human, visible or invisible, great or small, far or near, all these beings I shall treat with gentleness and wish that they may dwell in peace. May they be happy . . . May they be happy . . . May they be happy . . . ! I shall help them when they experience suffering, and be glad with them when they are happy. May I develop as well the incomparable equanimity, the mind in perfect balance that can never be upset!

"In looking to the welfare of others, I shall not forget my own progress on the path of Dhamma. May I indeed come to know how, driven here and there by the winds of kamma, I have suffered an infinity of lives in all the realms of existence! I must also turn my mind to consider how short and fleeting is this life. How mind and body are ever changing, arising and declining from moment to moment. How neither mind nor body belongs to me, neither of them is mine. I must also turn this mind to consider how beset by troubles is this brief life. Having been sired by craving and born out of ignorance, I must realize that death is inescapable, that old age and disease are natural to my condition. I must make efforts to realize for my own good and the good of others that this person called 'myself' is a complex of mentality and materiality wherein no abiding entity such as

a soul or self is found.

"May I through this practice experience insight into impermanence, ill and no-self! May I be one who dwells in the Void! And having realized this sublime truth may I show the way to others!"

When sitting, care should be taken that the body is kept erect, yet relaxed. There should be no strain, but neither should the head droop, nor the lumbar region sag. The body should feel poised and balanced upright. Although the cross-legged positions (such as the lotus posture) are best when the meditator is seated on a fairly soft mat, a chair may be used by those unaccustomed to the lotus posture or else unable to train themselves to sit in that way. Sitting in lotus posture or half-lotus posture will be found much easier if a rather hard cushion is placed so as to raise the buttocks. The knees will then tend to touch the ground and a firm three pointed sitting (two knees and buttocks) is then attained.

One should sit for the same length of time every day until, as one becomes more proficient in collecting the mind, automatically one will feel like extending the practice. One widely used method for measuring the meditation period is sitting for the length of time taken for a stick of incense to burn down. Having placed the hands in meditation posture relaxed in the lap, the eyes may be closed or left slightly open according to which is found most comfortable.

Methods used for helping to concentrate the mind are many, and the two main streams in classical meditation have been briefly reviewed in the section above. Other helpful methods include the repetition of a word or phrase and perhaps with it the use of a rosary. If one practices mindfulness of breathing, one may find the use of a word such as "Buddho," or "Araham" good for quietening the mind. The first syllable is silently repeated when breathing in, and one concentrates on the second during the out-breathing. Also the counting of breath (up to ten, but generally not over this number to prevent the mind wandering) is used as an aid for concentration. But

any such aids should be dropped when concentration improves. When the meditation is on a phrase only, a rosary may be used in conjunction, each repetition being marked by one bead.

One's meditation goes well if one finds the mind increasingly absorbed on the chosen meditation subject, but one should not assume that meditation is useless just because for a period, longer or shorter, not much more than sleepiness or distraction is experienced. These hindrances have to be faced; and if they are met, not by irritation or despair, but by quietly observant mindfulness, they can and will be overcome. For success, great persistence and evenness of effort are necessary.

The meditation period may close with some chanting, the usual subject being the well being of others and the distribution of merits to them. A translation, or the original Pali, of the Metta Sutta (//Discourse on Lovingkindness// [*]) may be chanted at this time and, as it is not long, can be easily memorized. As methods of chanting vary, it is very helpful if one can obtain recordings, perhaps on tape, of the passages one wishes to learn, recorded by bhikkhus.

* [See //The Practice of Lovingkindness (Metta))//, trans. Nanamoli, WHEEL No. 7.]

While on the subject of chanting, it is very useful to know a few discourses of Lord Buddha in one of the Buddhist classical languages, and to use these for collecting the mind if there should be an occasion when no concentration at all can be obtained. At such a time a meditator should not feel depressed but should continue sitting and chant softly to himself. This is what Buddhist monks do twice a day as part of their mental development, and it is useful as well for fostering a more devotional approach necessary as balance with intellectual characters. Another useful method for the overcoming of distraction is walking-practice, which may be done in any passage of the house or in a secluded walk in the garden. A length of twenty or thirty paces will be sufficient, for if longer the mind tends to wander, and if shorter, distraction may be increased. One should walk

at the speed one feels to be natural, with the hands clasped the left in the right, and arms relaxed in front of the body. At the ends of the walk one should turn in a clockwise direction. [*]

* [The tradition of "keeping the right side towards" respected persons and objects has a psychological basis. Also note in English right (for side) and right (good, correct).]

Perhaps a few words on devotion would not be out of place here, for this is very important in meditation practice. No one who is not a devoted Buddhist takes up //Buddhist// meditation, for the simple reason that he does not have the Buddhist ideals in his heart. The taking to heart of the Triple Refuge and the understanding of the Triple Gem are closely linked with Buddhist meditation. A really devoted Buddhist, who puts his whole life into the Dhamma, will have no insurmountable difficulties in meditation practice. Whatever obstacles he comes to, those he leaps over, sustained by devotion. He is prepared for the way to be long and hard because he realizes that he has made it like that. If he finds his way blocked, his meditation failing to progress and he himself without a teacher, he does not waver or falter on the way. He thinks, "I am now experiencing the results of intentional actions (kamma) made by me in the past." And he remembers Lord Buddha's last words: "Subject to breaking-up are all compounded things. With mindfulness strive on." All difficulties are compounded things and will eventually change; meanwhile much may be done with mindfulness, vigor and devotion.

If one is not too tired after work and if there is opportunity in the evening, another period of sitting can be undertaken then. In any case, before sleep, it is a wise practice to sit, if only for a few minutes, so as to purify the mind before lying down. One may consider thus: "When I lie down there is no certainty that I shall awake." One may, therefore, be lying down to die, and this is a good reflection to rouse skillful states of mind and banish sensual unskillful ones. If one practices this, "the lying-down to die," it will be a very good preparation for the real event, which is bound to take place at some time in the unknown future. It may even generate

the right conditions for the arising of insight allowing one "to die," giving up the grasping at what does not belong to one, that is, the mind and body. At this time also, a Dhamma phrase or word may be used, repeating which one eventually falls to sleep. In this way one ends and begins the day with practice of Buddhist teachings. And apart from devotion of one's whole day to them, what could be better?

Retreats

Regarding the second division of intensive practice, that is, when undertaken in retreat, much will depend upon what facilities are available to the earnest student. There are now a few places in the West where meditation instruction can be sought. The most important thing is to have direct contact with an able meditation master (books serve at the beginning, while even a teacher is later found deficient in some way). After satisfying this one condition, only one other is necessary: one must strive with diligence to practice and realize his teachings. If these two conditions are fulfilled, then one is the most fortunate among human beings.

Many will be without access to a teacher and some may like to try a period of solitary meditation in some quiet part of the country. This should only be attempted if one has already developed a good power of mindfulness. Otherwise what was meant to foster meditation may become a very unprofitable time, perhaps accompanied by the seeming intensification of the mental defilements.

Daily Life

As to the other sort of meditation practice, which is performed in daily life, though much may be written, the following few words may serve as a guide. First, one should not deceive oneself regarding concentration of the mind. It is of no use pretending to oneself or to others that one's daily life //is// meditation -- unless of course one has already great powers of concentration. Only the real adept, often

one who has sat for many years keeping the monastic discipline, can really perceive ordinary life as meditation; and such a one would be most unlikely to tell others of this fact. Refusing to allow pride an opportunity to distort the real state of mental affairs, one should take stock with fairness and admit one's limitations. This is already a great step forward. The layman who thinks of himself as an Arahat already, has blocked off very effectively all real progress; while the honest man has at least the wisdom to be humble.

Much may be accomplished with mindfulness, while without it there is no hope for meditation in daily life. How are quite ordinary events capable of being made into meditation? By mindfulness, which to begin with, may be defined as, //awareness of the present work in hand//. At first great effort has to be made in order to remain mindful of what one is supposed to be doing, nor can one pretend that such mindfulness is pleasant always. To escape from dull and unliked work and situations, we tend to turn either to fantasy worlds, hopes, or else to memories, which are respectively the delusive escapes into the present, future or past. But for one really interested in understanding himself, none of these courses is very rewarding, since they are compounded of delusion with various ingredients, such as fear, craving or ignorance. While in the practice of strict meditation, mindfulness may follow all the wanderings of the mind; in daily life it is better that the mind should be constantly returned to the job in hand. One should not "send" one's mind anywhere, neither to a dream-world nor to the past, nor to the future. Lord Buddha compared these periods of time thus:

"The past is like a dream,
The future as a mirage,
While the present is like clouds."

Such a simile may be useful as the mind darts about between dreams, mirages and clouds, all insubstantial, though the ever-changing present, so like the clouds in the sky, is the only aspect of time compared to things of greater reality. One may also consider meditation as the exercise of mindfulness which keeps the

mind "inside" this body, that is, always focused upon some aspect of it. Of course only the most sincere meditator, who sees the advantage in this to be greater than any pleasure offered by the world, is likely to practice in this way, since this cuts off not only interest in outer objects but also the toying with pleasant or intriguing ideas.

Indeed, with work that is really interesting, the way of mindfulness is the only way to convert one's day into something worthwhile. Days pass and bring us nearer to death and an unknown rebirth, while it is //now// that one has the chance to practice Dhamma. Instead of reacting with aversion or deluded fantasies towards what one does not like (or in other situations indulging one's greed), the Way of Mindfulness constitutes the Middle Practice-Path transcending these ancient patterns of reaction. There is no need to be ruled either by greed or by hatred, nor to be dominated by delusion; but only mindfulness shows the way beyond these.

Constantly bringing the mind back and disengaging it from tangles is the basic practice in everyday life. It is also wise to take advantage of those odd times during work when one waits for something to do, to meet someone, for a bus or train, or any time when one is alone for a few minutes. Instead of turning to a newspaper for distraction, to the wireless, or to another person for gossip, it is more profitable to "retire inside" oneself. Disengaging attention from exterior objects, take up mindfulness of breathing, or the repetition of some phrase of Dhamma, or significant word such as "Buddho" or "Arahant," doing this until one has again to attend to work. Going inwards as often as possible will be found very useful, strengthening one's sitting practice just as the latter in turn strengthens the ability to turn within.

Mindfulness of breathing is especially good as a concentration method for use during travel and during the times when one is restlessly expecting a bus or a train. Why be agitated or impatient? A little mindful breathing is just the practice for these moments, since it calms the feverish workings of the mind and the restless movements of the body. One does not have to aimlessly stare out of

windows while traveling! Why be a slave of the "eye-dominant" when a little useful practice could take its place? One does not have to listen to the idle chatter of others, so why be a slave to the "ear-dominant"? One cannot shut one's ears, but everyone can withdraw attention to some extent while practicing mindfulness.

It is mindfulness also which helps to bring into focus counteractive contemplations. Lust, for instance, is soon dissipated by thoughts of a decaying corpse. The looks which are bestowed on pretty girls (or handsome man) seem ridiculous when it is thought that old ladies and equally ancient men never attract such desire-filled attention. Only when one sees how lust burns up the one who indulges in it, only then does it seem worth relinquishing.

Similarly gluttony, even in a mild form, can be demolished by contemplating the bodily processes connected with food. Chewed food looks a good deal less palatable then when the same stuff before mixing with spittle was nicely laid out on plates. Vomit is just the same substances in the process of change but does not readily arouse greed. Excrement even if placed on the finest gold plate fails to become attractive -- yet this is the remnants of the food so eagerly gorged! By the time that one has contemplated food in these three stages, greed has quite disappeared, and one may take food just as a medicine to preserve the body.

Mindfulness is also responsible for becoming sufficiently aware in a moment of anger to turn the mind to other subjects or persons. It is mindfulness that warns one of an approaching situation where anger may arise, and makes it possible to turn aside and dwell in equanimity, or where the Divine Abidings are well developed, in friendliness.

When envy rears its ugly head, mindfulness gives one presence of mind to know "envy has arisen," and if efforts to arouse gladness with others' joy fail, it is mindfulness that helps one dwell in equanimity, or if all else fails, helps turn attention to other objects.

Lord Buddha has truly said, "Mindfulness, I declare, is helpful everywhere."

The social implications of meditation should be obvious from the above. Those who have the strange delusion that Buddhism is a religion of meditative isolation, offering society no social benefits, should understand that a Buddhist believes society can only be changed for the better, and with some degree of permanence, by starting work on himself. Buddhist ideals of society are expressed in a number of important discourses addressed by Lord Buddha to lay people, and in them the developments of the individual is always stressed as a very necessary factor. The advantages of a society in which there are a large number of those dwelling at peace with themselves need hardly be stressed. The development of wisdom and compassion by one man has its effect in leavening the materialistic dough around him. The Buddhist call is therefore //first// to gain peace in one's own heart, when will //follow//, quite naturally, peace in the world. Trying to obtain peace the other way round will never be practical nor produce a lasting peace, for the roots of greed, hatred, and delusion have still a firm grip on the hearts of people. Impractical? Only for those who do not practice. Those who take up the cultivation of mindfulness find out for themselves how it helps to solve life's problems.

Although many journeys to remote and attractive places are now performed with ease, the way leading to Nibbana still needs effort. But if the way is sometimes drear, with mindfulness the only guiding light, at least from reflection one knows that the goal is glorious and of great worth, not only for oneself but for others as well.

* * *

DIVINE ABIDINGS AND THEIR PERFECTION

(//Brahma-vihara//)

The way to that goal leads through what are called the Divine Abidings, [*] which train the deep-rooted emotions from being unskillful into the skillful way of the Dhamma. As had already been emphasized above, the aim of oneself as of all beings, is to gain happiness-producing conditions. Therefore one must act in such a way that happiness will result from one's actions. One should, in this case, treat others as they would wish to be treated, for every living being is dear to itself, and wishes its own welfare and happiness. One cannot expect to have an isolated happiness arising from no cause or from itself, nor can happiness be expected if one maltreats other beings, human or otherwise. Every being desires life and is afraid of death, this being as true of ourselves as of other creatures.

* [See Nyanaponika, //The Four Sublime States//, WHEEL No. 6.]

Only a man who constantly leads an upright and compassionate life is really dear to himself, for he does actions which are of great profit, of great happiness. Other people, although they think that they are dear to themselves, are really their own worst enemies, for they go about doing to themselves what only an enemy would wish for them.

Good conduct depends on a well-trained mind which has gradually been freed from the clutches of greed, hatred and delusion. To hold one's neighbor as dear as one should truly hold oneself, is easily said but with difficulty done. It is the particular merit of Lord Buddha's teachings that they always point out //how// a method is to be translated into experience, the method here being the mental training of the Divine Abidings. When we say "mental," this word should be understood not in the narrow sense of the intellectual processes, but rather to include the full range of the mind-and-heart, intellect and emotions.

There are four states of Divine Abidings: friendliness,

compassion, gladness and equanimity. These, especially the first, are very popular meditations in Buddhist countries. What follows is a short explanation of each.

//Friendliness// (//metta//) is an unselfish love which can be extended to everyone. This becomes easy once one has gained the meditative absorptions, when the quality of friendliness becomes an integral part of one's character. In the normal way of things, people only "love" the few people to whom they are especially attached by ties of family, etc. Such is love with sensual attachment, a limited love, and those outside that love are either ignored or disliked. Sensual love, then, is not only linked to attachment (greed), but also to hatred and delusion, so that the person who is content with this love pays a heavy price for it. A love without attachment is scarcely conceivable to many people, but such love is much superior to the former; being without attachment it can become infinite and need not be confined to this or that group of beings. As it can be made infinite, leaving none outside it, there is no question of the three roots of unskill being linked with it.

Friendliness can be developed gradually in one's meditation period every day, //but if it is really effective// it must show in one's daily life. It makes life easier by turning persons whom one formerly disliked or hated into, at the beginning, those whom one disregards, and then as one's practice becomes stronger, into objects for the arising of loving-kindness. It is Lord Buddha's medicine for the disease of hatred and dislike. Finally, one is warned that it has two enemies: the "near" one is sensual attachment, often miscalled "love," while the "far" enemy to its development is hatred. In the development of friendliness one must beware of these two.

//Compassion// (//karuna//) is taking note of the sufferings of other beings in the world. It overcomes callous indifference to the plight of suffering beings, human or otherwise. Likewise, it must be reflected in one's life by a willingness to go out of one's way to give aid where possible, and to help those in distress. It has the advantage of reducing one's selfishness by understanding others' sorrows. It is Lord Buddha's medicine for cruelty, for how can one

harm others when one has seen how much they have to suffer already? It has also two enemies: the "near" one is mere grief; while its "far" enemy is cruelty.

//Gladness// (//mudita//) is to rejoice with others over their success, gains happiness. It overcomes the grudging attitude to others, and the envy which may arise on hearing of others' joy. It must show in one's life as a spontaneous joy at the very time when one learns that other people have some gain or other, material or immaterial. It has the advantage of making one open-hearted towards others, and does away with secretiveness. A person who develops gladness attracts many friends who are devoted to him, and with them and others he lives in harmony. It is Lord Buddha's medicine for envy and jealousy, which it can inhibit completely. The two enemies of gladness are the merely personal happiness of reflecting on one's own gains -- this is the "near" enemy; while the "far" one is aversion to, or boredom with, this gladness.

//Equanimity// (//upekkha//) is to be developed to deal with situations where one should admit that it is beyond one's powers to change them. It overcomes worry and useless distraction over affairs which either do not concern one or else cannot be changed by oneself. It is reflected in one's life by an ability to meet difficult situations with tranquility and undisturbed peace of mind. The advantage to be seen in its development is that it makes one's life more simple by disengaging from useless activity. It is Lord Buddha's medicine for distraction and worry, and its enemies are mere indifference, which is the "near" one; while greed, and its partner resentment, which involve one unskillfully in so many affairs, are its "far" enemies.

The mind well-practiced in these four virtues, and then well-trained by their use in daily life, has already gained very much.

Three of the perfections (//parami//), or qualities, practiced by many Buddhists who aspire to enlightenment may also be outlined here, as they too have an intimate bearing on the practice of meditation.

* * *

PATIENCE AND ITS PERFECTION

(//Khanti-Parami//)

Patience is an excellent quality much praised in Buddhist scriptures. It can be developed easily only if restlessness and hatred have already been subdued in the mind, as is done by meditation practice. Impermanence, which has the tendency to make one rush around and thus miss many good chances, results from the inability to sit still and let things sort themselves out -- which sometimes they may do without one's meddling. The patient man has many a fruit fall into his lap which the go-getter misses. One of them is a quiet mind, for impatience churns the mind up and brings with it the familiar anxiety-diseases of the modern business world. Patience quietly endures -- it is this quality which makes it so valuable in mental training and particularly in meditation. It is no good expecting instant enlightenment after five minutes practice. Coffee may be instant, but meditation is not, and only harm will come of trying to hurry it up. For ages the rubbish has accumulated, an enormous pile of mental refuse, and so when one comes along at first with a very tiny teaspoon and starts removing it, how fast can one expect it to disappear? Patience is the answer, and determined energy to go with it. The patient meditator really gets results of lasting value; the seeker after "quick methods" or "sudden enlightenment" is doomed by his own attitude to long disappointment.

Indeed, it must soon become apparent to anyone investigating the Dhamma, that these teachings are not for the impatient. A Buddhist views his present life as a little span perhaps of eighty years or so, and the latest one so far of many such lives. Bearing this in mind, he determines to do as much in this life for the attainment of Enlightenment as possible. But he does not overestimate his

capabilities; he just quietly and patiently gets on with //living// the Dhamma from day to day. Rushing headlong at Enlightenment (or what one thinks it is), like a bull in a china shop, is not likely to get one very far, that is unless one is a very exceptional character who can take such treatment, and most important, one who is devoted to a very skillful master of meditation.

With patience one will not bruise oneself, but will go carefully step by step along the way. We learn that a Bodhisatta is well aware of this, and that he cultures his mind with this perfection so that it is not disturbed by any of the untoward occurrences common in this world. He decides that he will be patient with exterior conditions -- not to be upset when the sun is too hot or the weather too cold. Not to be agitated by other beings which attack his body, such as bugs and mosquitoes. Neither will he be disturbed when people utter harsh words, lies or abuse about him, either to his face or behind his back. His patience is not broken even when his body is subjected to torment, blows, sticks and stones, tortures, and even death itself; he will endure these steadily, so unflinching is his patience. Buddhist monks also are advised to practice in the same way.

In Buddhist tradition the perfection of patience is rather better known than some of the others. This is because a quite outstanding Birth Story illustrates it. The Khantivadi (Teacher of Patience) Birth Story [*] should be read many times and made the object of deep and frequent reflections. Only an exceptionally noble person, in this case Gotama in a previous life, when he was called the Patience-teaching Rishi, can gently exhort a raging and drunk monarch, who out of his jealous anger, is slowly cutting that person's body to pieces. Such nobility did the Bodhisatta have and such nobility, steadfast endurance, and gentleness, is required of all who would try to reach the goal of Enlightenment.

* [Jataka No. 33, see translation issued by the Pali Text Society.]

* * *

ENERGY AND ITS PERFECTION

~~~~~~~~~~~~~~~~~~~~~~~~~~

(//Viriya-parami//)

Just as Enlightenment is inconceivable unless a person has patience, so it is not attainable without effort being made. The Dhamma never encourages the doctrine of fatalism, and true Buddhists never think of events as being rigidly predetermined. Such fatalism is combated by mindfulness and by energy itself. This perfection is the counterpart of the previous one, and balanced by practice, they ensure that the sincere Buddhist neither passively accepts what he should combat nor rushes around to the disturbance of himself and others when he should have patience. By way of warning it may be mentioned here that in the Buddhist world can be found a number of "methods" which seem to promise the riches of Dhamma all in no time. One hears such remarks as, "What's the use of books and study?" Or even, "The development of calm is a waste of time! One should only develop insight." Such lop-sided approaches do not reflect the wisdom of Lord Buddha, who taught time and again the necessity of a //balanced// development of mind. Books and their study //are// useful to some people who wish to gain a good background of what Lord Buddha really said, before taking up more intensive practice. As for the other assertion, no real insight (only delusive ideas) will arise to the person whose mind has no experience of calm. Such views as these, which are usually based on some peculiar experience of those "teachers" who originate them, are apt to mislead many, since the craving for quick results coupled with the dislike of the necessary hard work, are easily stirred up. There must be patience to accept that the conditions required for success of meditation (as outlined here) have to be fulfilled, and the only result if failing to do so, is straying off the Way. The meditator applies himself steadily to whatever task he has in hand and, coming to the end of it, does not feel tired at all but straightaway takes up a new objective.
~~~~~~~~~~~~~~~~~~~~~~~~~~

It is interesting in this respect that tiredness is of two kinds: that relating to physical exhaustion; and the other kind which is mentally induced and involves the unskillful factors of sloth and torpor. While the former is of course unavoidable, the latter occurs only when the unskillful root of delusion (or dullness) becomes predominant in the mind. This happens when there is a situation which is unpleasant to "me," unwanted, and from which "I" want to escape. People complain that they become much more tired sitting in meditation while practicing intensively than they do when, say, they do a bit of heavy reading. When the self feels threatened by a self-revealing event, then this self, rooted in unknowing, throws up a dense fog of torpor proceeding from the root of delusion. On the other hand, many who have practiced much meditation remark that they do not have to sleep so long as they did formerly, while energy, when it becomes a perfection as practiced by the Bodhisatta, is quite natural and unforced.

This perfection is illustrated by the story of the caravan-leader who saved the merchants, men and animals entrusted to his care, by vigorous action. When others would have given themselves up to death since the caravan had taken a wrong course in the desert and all supplies were exhausted, their leader forced one of them to dig for water, which he found. In this way, in a previous life did Gotama, as the caravan-leader, make effort not only for his own life but also for the welfare of others. Monks are also referred to as "caravan-leaders" in several places in Pali scriptures, showing that it is not only Lord Buddha or a Bodhisatta who is able to guide others. If we deal energetically with our own training then we too have energy for the advancement of others. Many other stories like the above could be found in Buddhist works showing how necessary is energy, from which spring persistence and determination for the seeing of the truly real, Nibbana.

* * *

COLLECTEDNESS AND ITS PERFECTION

(//Samadhi-parami//)

Bearing in mind the meanings of this word together with such specialized terms as (mind-) development (//bhavana//), absorption (//jhana//), insight (//vipassana//), one-pointedness (//ekaggata//), and meditaton exercise (//kammatthana//), we may now examine what constitutes perfected collectedness. What especially marks off the good Buddhist's practice, whether he be a Bodhisatta or not, from that of an ordinary meditator (in any religion), is that the latter will most likely become firmly attached to the delights occurring in the upper reaches of the sensual realm, or to the pure joys of the realm of form and, as a result, come to birth in one of these heavenly states. If one gets oneself trapped in one of these bourns, where pleasures and joys are great and sufferings but little, then it is unlikely that one will be able to generate the energy necessary for the perfection of wisdom. Therefore, the good meditator tries to become proficient in the absorptions (so that he can enter them when he likes, and emerge when he likes), while not being attached to them. But one should note that this applies only to the skilled meditator who has already obtained the absorptions. If one has not reached to these levels, then ardent aspiration, not detachment, will be the correct attitude.

After these absorptions have been attained, they may be reviewed as impermanent, unsatisfactory and devoid of self or soul (//aniccam//, //dukkham//, //anatta//), at which time detachment from them will naturally arise and insight (//vipassana//) be experienced. The absorptions (and the powers which may arise in connection with them) are thus, in the Buddhist way of training, never an end in themselves but are always used to promote insight and wisdom, which arise when the collected mind is set the task of examining the mind and body in order to know completely their characteristics.

A story which brings out the meaning of this perfection is told of Kuddalamuni's life. His name means the Mattock sage and he was thus called because of the difficulty he experienced in freeing himself from attachment to his mattock. Several times leaving his house with intent to meditate in the forest, he was dragged back by the memory of his mattock and his old occupation of farming. One day, reflecting on the inconstancy with which he pursued meditation, he took his mattock and, whirling it round his head, sent it spinning into the depths of the nearby Ganges. Having done this, he burst out in a great cry of joy. The local rajah who was passing that way with his army, sent a man to enquire why this farmer was so joyful, to which the sage replied by relating his experience. The rajah and many others were much impressed by his reply, and some followed him to take up a meditative life in the forest; after which, we are told, all passed away to experience life in the realm of form. The Mattock-sage, who was none other than Gotama in a past life, exhibited even then another aspect of the perfection of meditation: the ability to train others in meditation after gaining proficiency in it oneself.

Finally, we may add brief notes on some of the dangers to meditation practice.

* * *

DANGERS TO MEDITATION

While the number of ways a meditator may go astray is legion, the few mentioned below deserve a special mention due to their common occurrence. First, a danger that cannot be stressed enough is the lack of right motivation for the practice of meditation. When the Eightfold Path is described, in its "wisdom" section, standing next to the (at first) intellectual right understanding, comes right motivation, thus emphasizing that the emotional roots underlying practice of the Way must be skillful ones: those connected with

renunciation (non-greed), goodwill (non-hatred) and non-violence are mentioned. If one approaches Buddhist meditation with neither right understanding regarding //dukkha// and its cessation, nor with right motives, then one's meditation is liable to seriously astray.

There have, for instance, been those who took up meditation as a way to invest themselves with power, so that they could easily sway or hypnotize disciples. Others have seen it as a quick way to gain both disciples and riches. Fame may also be an unworthy motive. All these, as motives for playing with meditation, may easily lead the unwary into illness, and sometimes mental unbalance. There is nothing worse in Buddhist meditation, where a person's own sure experience is of paramount importance, than a half-baked disciple who sets himself up as a master.

This obviously leads on to a further danger -- that of pride, of which there are several forms. One such is the pride of the person who has seen manifestations of light during meditation, and supposes this to be the sign preceding mental absorption. Then there is the pride of one who touches on a mental absorption if only for an instant and as a result assumes that he has become a Noble One, and this can be a very powerful factor in convincing himself if not others. Quite ordinary people who take up meditation may beware of the common "holier-than-thou" attitudes: "I make an effort, whereas you . . .," or, "//I// meditate every day, whereas you . . ." Pride is a great obstacle to any progress, and while it is only a Buddha or Arahat who is entirely rid of it, everyone should have the mindfulness to check it.

Related to this is the danger for the person who always looks for so-called progress. He is sure that he is making "progress" because in meditation he sees lights, hears sounds, or feels strange sensations. He becomes more and more fascinated by these as time goes by, and gradually forgets that he started with the aspiration to find the way to Enlightenment. His "meditation" then degenerates into visions and strange happenings, leading him into the realms of occultism and magic. There is no surer way for a meditator to become entangled than this way. Fascinating though all such manifestations

may be, they should be rigorously cut down by resorting to bare attention, never permitting discursive thought regarding them, and thus avoiding these distractions.

Among "visions" which one may see, whether they be internal (produced from one's own mind) or external (produced by other beings), there may be for some meditators an experience of the fearful, such as the sight of one's own body reduced to bones or inflated as a rotting corpse. If such an experience occurs, or others of a similar nature, one should withdraw the mind from the vision immediately, supposing that one has no teacher. Visions of the fearful variety which occur to some people may be very useful if rightly employed, but without a teacher's guidance they should be avoided.

Another danger is trying to meditate while one is still too emotionally insecure, unbalanced or immature. An understanding of the value of meritorious deeds or skillfulness will come in useful here. As merit purifies the mind, it will be an excellent basis for mind-development, and both the ease with which absorptions are gained and the ease with which insight arises are to some extent dependent upon merit. Meritorious deeds are not difficult to find in life. They are the core of a good Buddhist life: giving and generosity, undertaking the precepts, help and service to others, reverence, listening whole-heartedly to Dhamma, setting upright one's understanding of Dhamma -- all these and more are meritorious deeds which bring happiness and emotional maturity. //Merit//, one should always remember, //opens doors everywhere//. It makes possible, it makes opportunities. To have a mind at all times set upon making merit, is to have a mind that may be trained to develop absorptions and insight.

Obviously it follows that to try to practice meditation while all the time retaining one's old cravings, likes and dislikes is, to say the least, making one's path difficult if not dangerous. Meditation implies renunciation, and no practice will be successful unless one is at least prepared to make efforts to restrain greed and hatred, check lust, and understand when delusion is clouding the heart. How far one carries renunciation and whether this involves

outward changes (such as becoming a monk or nun), depends much on a person and his circumstances, but one thing is sure: inward renunciation, an attitude of giving-up with regard to both unskillful mental events and bodily indulgence, is absolutely essential.

Often connected with the above dangers is another, to be seen in cases where a man suddenly has an opportunity to undertake a longer period of meditation practice. He sits down with the firm resolve, "Now I shall meditate," but though his energy is ever so great and though he sits and sits and walks and walks, still his mind is disturbed and without peace. It may well be that his own strong effort has much to do with his distractions. Moreover, he has to learn that it is necessary to meditate knowing the imitations of his character. Just as any other worker who knows the limits of his strength and is careful not to exhaust himself, so is the able meditator careful. With mindfulness one should know what are the extremes, of laziness and of strain, to be avoided.

It is through straining or forcing meditation practice that many emotionally disturbed states arise. Sudden bursts of intense anger all over insignificant trifles, fierce cravings and lusts, strange delusions and even more peculiar fantasies can all be produced from unwisely arduous practice.

With all these dangers it is a skilled teacher who is most necessary to give advice, so that these and other wrong turnings are avoided and one keeps straight along the way to Nibbana. Those who are without a teacher should proceed with utmost caution, making sure that their development of mindfulness is very good indeed. If they are mindful and see that despite their efforts, their meditation practice is making no real difference to their lives in terms of greater internal peace, or externally in relation to others, then it should be apparent that something is wrong. Meditation may be laid aside for some time while making efforts to contact a genuine source of information, preferably a living meditation master, in the meantime giving due attention to unsolved moral problems, which until sorted out will not permit the mind to develop; and making a great effort to live one's life according to Buddhist standards. When quite basic

matters of this sort are neglected, one cannot hope to make much progress upon the Middle Practice-Path.

* * *

APPENDIX

40 MEDITATION EXERCISES
as listed in the //Path of Purification//

If one has no meditation teacher from whom one may request a meditation subject, then one has to rely upon one's knowledge of one's character in order to prescribe for oneself a suitable meditation. There are forty meditation exercises (//kammatthana//) noted by the great teacher Buddhaghosa as being suited to certain types of character. For the purposes of meditation, he considers six characters: faithful, intelligent, and speculative (in which the skillful roots of non-greed, non-hatred and non-delusion are variously dominant); and greedy, hating, and deluded (in which greed, hatred and delusion, the unskillful roots, are dominant). The trouble here is twofold: firstly, very few "pure" types can be found, most people being mixtures of two or more of them -- and moreover ever-changing mixtures; and secondly, it is rather difficult to judge which class one's character belongs to since one's own delusion and pride are apt to blur one's judgements. This is but one small matter in which the value of the meditation teacher may be discerned very easily. One may learn much about oneself, however, by being mindful //at the time when some unexpected event takes place//. //At that time// one can spot one's reaction and the stains which are present in the mind. Later judgements are not worth very much, since by that time the mind has got round to self-justifications, and other kinds of distortions of

the original event.

Below is given the list of the forty meditation exercises with some notes upon their practice, the characters which are benefited, and the types of stains combated by them. The most widely used meditation exercises are starred (*).

Ten Kasinas (spheres, lit: totalities)
~~~~~~~~~~~

1. earth
2. water
3. fire
4. air
5. blue
6. yellow
7. red
8. white
9. light *
10. limited space

5-8 recommended for the practice of //hate// characters because of their pure, pleasing colors.

Apart from the possible exception of 5-8, no special moral stain is counteracted by these ten kasinas. As they are to be developed through the eye, they will not be very suitable for anyone with weak sight (according to Buddhaghosa).

The only one of the ten kasinas which seems to be practiced much these days is that of light, which some people find arises quite naturally when they begin to concentrate the mind. While Acariya Buddhaghosa's explanations in //Path of Purification// tend to stress the importance of using exterior supports for practice (the making of the earth kasina is very minutely described), whenever the writer has heard of them being employed (in Thailand), they are always in the nature of visions (//nimitta//) arising internally and being developed
~~~~~~~~~~~

from this basis. It appears that contemplations of an exterior earth, etc. kasina is unknown in Thailand.

Ten Kinds of Foulness (//asubha//)
~~~~~~~~~~~~~~~~~~~~~~

11. the bloated (corpse) counteracting delight in beauty of proportions
12. the livid ... beauty of complexion
13. the festering ... scents and perfumes
14. the cut-up ... wholeness or compactness
15. the gnawed ... well-fleshed body
16. the scattered ... grace of limbs
17. the hacked and scattered ... grace of body as a whole
18. the bleeding ... ornaments and jewelry
19. the worm-infested ... ownership of the body
20. the skeleton ... having fine bones and teeth

11-20 recommended for //greed// characters.

These and similar lists in the Satipatthana Sutta reflect the time when disposal of corpses upon charnel-grounds was common. Now, however, even in Buddhist lands they are difficult to find, let alone in Western countries. Teachers in Thailand at the present time stress that //one's own body// is to be seen in these ways as a vision (//nimitta//) arising in the course of mind-development. As these can be fearful, one should have the instruction of a skilled teacher for dealing with such visions, when they can be of great advantage. It may be stressed here that there is nothing morbid in contemplating such sights, interior or exterior, as these. The body's decay is just something natural, but normally it is not seen because people do not like to admit this. Instead of facing bodily decay and bringing it out into the open, dead bodies are even made to look attractive by embalmers and cosmeticians; and where this cannot be done, they are stowed away in beautiful coffins with bright flowers, etc. Buddhist training makes one look squarely at those aspects of life which normally (that is, with craving) are not considered "nice," and makes one calmly face them in respect of one's own mind and body.
~~~~~~~~~~~~~~~~~~~~~~

Ten Reflections (//anussati//)
~~~~~~~~~~~~~~~

Stains (///kilesa//) counteracted

21.	upon the Buddha *	-
22.	" " Dhamma	-
23.	" " Sangha	-
24.	" virtue (//sila//)	bad conduct (//duccarita//)
25.	" generosity	meanness (//macchariya//)
26.	" celestials	scepticism (//vicikiccha//)
27.	" death	laziness
28.	" body *	lust & sensuality (//kama-raga//)
29.	" breathing *	delusion, worry
30.	" peace	disturbance

21-26 recommended for //faith// characters
27 " " //intelligent// characters
28 " " //greedy// characters
29 " " //deluded/speculative// characters
30 " " //intelligent// characters

This group of ten has a more miscellaneous character than the previous two groups. In practicing the first three recollections (21-230 one recited the lists of qualities of each one of these [*]. Or if the mind does not become concentrated in this way, one chooses one particular quality and recites that silently and continuously (such as "Buddho" or "Araham"). Rosaries are used in some places in connection with practice of this sort. The recollections on virtue and generosity are specially good to cultivate in one's old age. One reviews all the meritorious deeds (//punna//) made by one in the course of life, and recollecting them the mind becomes tranquil and happy, and having such a mental state at the time of death, one is sure to be reborn in very favorable surroundings. One cannot recollect the celestials (//deva//) except by hearsay unless one has
~~~~~~~~~~~~~~~

seen them. This practice is suitable for those who have increased the range of their minds and so have made contact with other more subtle beings. Death may be recollected by //intelligent// characters since they will not be frightened at the prospects which this practice opens up. It is a great incentive to practice //now// when one does not know whether even one second from hence, one will be alive. The twenty-eighth recollection -- on the body -- is for //greedy// characters, who need to develop dispassion regarding the body. This is achieved by the analysis of the body into thirty-two unbeautiful parts, and then by selecting one or more of these and examining it. However, this practice comes to perfection when with insight the body is illuminated and its various components are clearly seen and their nature understood. The mindfulness of breathing is recommended for calming and clearing the mind, and a person of almost any temperament may practice it with benefit, though great care is needed in the subtler ranges of this exercise. The breathing is never forced but observed constantly with mindfulness, the point of concentration being usually the nose-tip or nostrils. However, teachers vary in their practice of it. The recollection of peace, says the great Acariya, is only of certain benefit to those who have already experienced Nibbana, such as stream-enterers; but others can gain some calm from contemplation of peacefulness. The peace spoken of here is really Nibbana, and as one cannot recollect what one has not known, if a worldling (//puthujjana//), this is a practice for the Noble Ones (//ariya//).

* [See //The Mirror of the Dhamma//, WHEEL No. 54 a/b.]

4 Divine Abidings (//Brahma-vihara//)
~~~~~~~~~~~~~~~~~~

	Stains counteracted
31. friendliness *	hatred, dislike
32. compassion	callous indifference
33. gladness (with others)	envy
34. equanimity	worry

* recommended for //hate// characters
~~~~~~~~~~~~~~~~~~

4 States of Formlessness (//arupa-bhava//)
~~~~~~~~~~~~~~~~~~~~~~~~

35. sphere of infinite space
36. " " infinite consciousness
37. " " nothingness
38. " " neither-perception-nor-non-perception

These formless absorptions cannot be developed unless one has already perfected the four ordinary absorptions of form. It is said that this group of four may be explored on the basis of the fourth absorption (//jhana//). As few people are likely to have experienced this, we pass on to:

Perception of the Loathsomeness of Food
~~~~~~

39. While it is essential for the bhikkhu who has to rely upon collected food (which is sometimes good and sometimes not), lay people can also benefit from this practice, which Acariya Buddhaghosa notes is for //intelligent// characters, and is designed to lessen, and lead to the destruction of, greed and gluttony.

One Defining of the Four Great Elements
~~~~~~

40. These are earth (solidity), water (cohesion), fire (temperature), and air (movement), all of which characterize our physical bodies. These elements may be perceived by an analysis based upon the use of mindfulness. [*] This practice is also said to be particularly fitted for the //intelligent// character.

* [See //The Foundations of Mindfulness//, trans. Nyanasatta, WHEEL No. 19, p. 15; and Ledi Sayadaw, //A Manual of Insight//, WHEEL No. 31/32, pp. 25, 78.]
~~~~~~

Those practices not mentioned in connection with character are suited to anyone. As all of these practices are aimed at the lessening and eventual destruction of the stains (//kilesa//), one may appreciate how important they are thought in Buddhist training. Where the stains are present, there the darkness of unknowing holds sway; but where they are not found, there shines forth the wisdom and compassion of Enlightenment.

THE BUDDHIST PUBLICATION SOCIETY

The BPS is an approved charity dedicated to making known the Teaching of the Buddha, which has a vital message for people of all creeds. Founded in 1958, the BPS has published a wide variety of books and booklets covering a great range of topics. Its publications include accurate annotated translations of the Buddha's discourses, standard reference works, as well as original contemporary expositions of Buddhist thought and practice. These works present Buddhism as it truly is -- a dynamic force which has influenced receptive minds for the past 2500 years and is still as relevant today as it was when it first arose. A full list of our publications will be sent upon request with an enclosure of U.S. $1.00 or its equivalent to cover air mail postage.

ÉÍÍÍ

Therefore this does not necessarily carry with it the renunciation complexion generally associated with the shaven-headed, dyed-robed monk. Nevertheless, it would ultimately lead to the highest achievements of Buddhist religious living which both converge in and are gathered at the perfect state of ego-lessness required of the recluse , often described as a state of dignified detachment.

The philosophy of the Buddha and the way of life he recommended was in marked contrast to what was prevalent in certain circles in India at the time. In the religious controversies of the time, in the battle of the spirit against the body, the flesh was tortured and human life was degraded to lamentably low depths. These are described in graphic detail in the Mahasaccaka Sutta of the Majjhima Nikaya [M.1. 242-5] where the Bodhisatta, while he was yet experimenting in his search for release, is seen indulging in them. Finally the Bodhisatta rejected them as being of no avail. Once King Pasenadi of Kosala, while he was in the company of the Buddha, spoke of the followers of such creeds in the following words:

"There I see recluses and Brahmins who are emaciated and lean, discoloured and looking exceedingly pale. The veins have become visible all over their bodies. People will indeed not be delighted to see them." [See Majjhima Nikaya 11.121. Dhammacetiya Sutta]

When these religious men were questioned by the King as to what motivated them into these austere practices, their reply was that it was their religious heritage and that this self-inflicted physical tyranny was part of their religious discipline [Bandhukarogo no maharaja ' ti]. Religious men who indulged in such practices freely roamed the streets of India then as some of them do even today.

In the above description of some of the contemporary Indian ascetics as being repulsive, the original texts use a phrase which means 'do not catch the eye of the onlooker ' [Na viya manne

cakkhum bandhanti janassa dassanaya]. This means that on seeing them , feelings of pleasure or joy do not arise in the minds of people. We call an object which comes within the range of our vision beautiful, under normal conditions, in relation to the degree of pleasurable feelings it generates within us, i.e. to the degree of pleasurable acceptability we are willing to offer it. In this realm of beauty, namely visual, colour and form are dominant considerations. In defining or judging beauty, whether there are absolute criteria in relation to colour and form, is a debatable point. They are judged, for the most part, on accepted values, accepted collectively or individually. Through collective persuasion, impersonally though, these values acquire semi-absolute standards. Groups, as much as individuals, would declare things as being beautiful on this basis. If one were to thoroughly simplify this concept of beauty, one could say ' a thing of beauty is joy for ever '. Likewise objects also become capable of giving delight and producing pleasurable feelings through personal association. Such objects then become beautiful, meaningful and significant. Here, memory as well as personal identification and association as well as re-creation and re-association of situations of the past sometimes add to the beauty of an object of the present.

Although this appears to be a totally subjective approach and hence bound to lead to a diversity of notions and standards, one can nevertheless discern at times an objective continuity running through this diversity. In these cases we are looking at the beauty-value of objects from the point of their producing pleasurable feelings in the minds of those who behold them. At the same time, beauty does not need to be always equivalent to what is pretty or good looking, as expressed in common parlance.

Objects which are not pretty on the normally accepted terms are capable of stimulating emotions and giving aesthetic delight because of their special significance to the person concerned. Here, it is not the mere subjective, personal factor. One uses here a different yard-stick, out of the common run of man. In

defining beauty and the appeal of beauty, this is what is sometimes called ' the action of the mind '. Even what is weird and grotesque, is capable at times of being beautiful and producing aesthetic delight. The disciples of the Buddha, with their serene sense of detachment, found such places and things particularly inspiring. The venerable Sariputta, undoubtedly the foremost of the Buddha's disciples, is found commending in the verses of the Theragatha, the austerity of the dwelling place of his younger brother, Revata. Thus he says:

In village or the wild, in vale or hill, Wherever the men of worth, the arahants Their dwelling make, delightful is the spot. Delightful are the forests, where no crowd Doth come to take its pleasures; there will they Who are released from passions find their joy. Not seekers they for sense-satiety. Thag. 991-2

Note here the words ' Not seekers they for sense-satiety ' [na te kamagavesino]. For evidently, a good part of true beauty would indeed be shut out from those who are mere pleasure seekers. Elsewhere in the Theragatha, the sylvan retreats which Kassapa the Great describes as soul-delighting, had indeed a beauty which was peculiarly their own.

Those upland glades delightful to the soul, Where the Kareri spreads its wildering wreaths, Where sound the trumpet-calls of elephant: Those are the braes wherein my soul delights. Those rocky heights with hue of dark blue clouds, Where lies enbosomed many a shining tarn Of crystal-clear, cool waters and whose slopes The `herds of Indra' cover and bedeck: Those are the braes wherein my soul delights.

Like serried battlements of blue-black cloud Like pinnacles on stately castle built, Re-echoing to the cries of jungle folk: Those are the braes wherein my soul delights. Thag. 1062-64

Crags where clear waters lie, a rocky world, Haunted by black-faced apes and timid deer, Carpeted with watery moss and lichen: Those are the braes wherein my soul delights. Thag 1070

In the above verses, expressions like ' where sound the trumpet-calls of elephants', ' Re-echoing to the cries of jungle folk ', ' Haunted by black-faced apes and timid deer ' and ' Carpeted with watery moss and lichen ' have a distinctness of their own. It must also be conceded that they reflect the emergence of a particular culture pattern. But the extent to which it found expression and developed later to a fuller richness, depended on the particular genius of the different people into whose midst Buddhism found its way. Buddhists of Japan, particularly those of the early Zen tradition stand unique in this respect.

To give our listeners a sampling of theheights to which Buddhist thinking elevated Japanese poets , let me quote a couple verses written by the great Haiku poet of Japan of the 17th century - Master Basho. Sitting lonely in a solitary hut with only a banana plant nearby as his good neighbour, Basho writes -

A banana plant in the autumn gale -
I listen to the dripping of rain
Into a basin at night.

Does this not remind one of the ecstacies of the forest-dwelling monks of the Theragatha we have discussed in detain above ? Here is yet another from Master Basho and his comrade poets.

Above a town
Filled with the odours of things,
The Summer moon.
" It's hot ! " "It's hot ! "
Murmurs are heard in the frontyards.

What a beautiful study in contrast of our bustling metropolitan life which we ourselves have created and the potential of inner peace which lies so close with nature in the world outside ! As a man of mature sancity and deep conviction , a fortnight before

his death Basho wrote this haiku.

A white chrysanthemum -
However intently I gaze,
Not a speck of dirt.

This attitude also made it possible at times to convert even what was perilous and imminently dangerous into a source of delight and inspiration and to view it with admiration. Here is Thera Talaputa telling us of a phase of life he has been through:

There in the jungle ringing with cries of peacock and of heron wilt thou dwell, By panthers and by tigers owned as chief. And for thy body cast off care; Miss not thine hour, thine aim! Thag 1113

We run into an even more interesting situation in the story of Ekavihariya Thera who tells us thus: Yea, swiftly and alone, bound to my quest, I'll to the jungle that I love, the haunt Of infuriated elephants, the source and means Of thrilling zest to each ascetic soul. Thag 539

Even an underlying threat to life like the panthers and tigers and the infuriated elephants does not appear to rob the collective ensemble of its inherent beauty. To appreciate fully the reward of this cultivated Buddhist attitude, we should particularly mark the words 'swiftly' and 'alone', 'bound to my quest', 'infuriated elephants' and 'thrilling zest to each ascetic soul'. What is of further interest to us is that the Commentary tells us that this Ekavihariya Thera is none other than the younger brother Tissa of the Emperor Asoka. We are told that the prince, while hunting, was so impressed at the sight of the Greek Thera Yonaka Maha Dhammarakkhita seated under a tree, that he also longed to live so in the forest. Longing for the happiness of the recluse, he is said to have uttered the above verses. If we give adequate credence here to the Commentarial tradition , it implies the vibrant continuance of the Buddhist aesthetic values we have discussed above and their survival even after several centuries.

[All translations of the Theragatha are from Mrs. Rhys Davids' Psalms of the Brethren].

ENVISIONING THE FUTURE

A Paper Prepared for the Conference, Dhammic Society: Towards an INEB Vision, Wongsanit Ashram, Thailand, February 20-24, l995.

Robert Aitken, Roshi

"Small is beautiful," E.F. Schumacher said, but it was not merely size that concerned him: "Buddhist economics must be very different from the economics of modern materialism," he said. "The Buddhist sees the essence of civilisation not in a multiplication of wants but in the purification of human character." (1)

Schumacher evokes the etymology of "civilisation" as the process of civilising, of becoming and making civil. Many neglect this ancient wisdom of words in their pursuit of acquisition and consumption, and those with some civility of mind find themselves caught in the dominant order by requirements of time and energy to feed their families. As the acquisitive system burgeons, its collapse is

foreshadowed by epidemics, famine, war and the despoliation of the Earth and its forests, waters and air.

I envision a growing crisis across the world as managers and their multinational systems continue to deplete finite human and natural resources. Great corporations, underwritten by equally great financial institutions, flush away the human habitat and the habitat of thousands of other species far more ruthlessly and on a far greater scale than the gold miners who once hosed down mountains in California. International consortiums rule sovereign over all other political authority. Presidents and parliaments and the United Nations itself are delegated decision-making powers that simply carry out previously established agreements.

Citizens of goodwill everywhere despair of the political process. The old enthusiasm to turn out on election day has drastically waned. In the United States, commonly fewer than fifty percent of those eligible cast a ballot. It has become clear that political parties are ineffectual - whether Republican or Democrat, Conservative or Liberal - and that practical alternatives must be found.

We can begin our task of developing such alternatives by meeting in informal groups within our larger Sanghas to examine politics and economics from a Buddhist perspective. It will be apparent that traditional teachings of interdependence bring into direct question the rationale of accumulating wealth and of governing by hierarchal authority. What then is to be done?

Something, certainly. Our practice of the Brahma Viharas - kindliness, compassion, goodwill and equanimity would be meaningless if it excluded people, animals and plants outside our formal Sangha. Nothing in the teachings justifies us as a cult that ignores the world. We are not survivalists. On the contrary, it is clear that we're in it together with all beings.

The time has surely come when we must speak out as Buddhists, with firm views of harmony as the Tao. I suggest that it is also time for us to take ourselves in hand. We ourselves can establish and engage

in the very policies and programmes of social and ecological protection and respect that we have heretofore so futilely demanded from authorities. This would be engaged Buddhism, where the Sangha is not merely parallel to the forms of conventional society, and not merely metaphysical in its universality.

This greater Sangha is, moreover, not merely Buddhist. It is possible to identify an eclectic religious evolution that is already under way, one to which we can lend our energies. It can be traced to the beginning of this century, when Tolstoy, Rushkin, Thoreau and the New Testament fertilised the Bhagavad Gita and other Indian texts in the mind and life of M.K. Gandhi. The Southern Buddhist leaders AT. Ariyaratne and Sulak Sivaraksa and their followers in Sri Lanka and Thailand have adapted Gandhi's "Independence for the Masses" to their own national needs and established programs of self-help and community self-reliance that are regenerative cells of fulfilling life within their materialist societies. (2)

Mahayana has lagged behind these developments in South and Southeast Asia. Whereas in the past, a few Far Eastern monks like Gyogi Bosatsu devoted themselves to good works, another few like Hakuin Zenji raised their voices to the lords of their provinces about the poverty of the common people, and still others in Korea and China organised peasant rebellions, we do not today see widespread movements in traditional Mahayana countries akin to the village self-help programs of Ariyaratne in Sri Lanka, or similar empowerment networks established by Sivaraksa in Thailand.

"Self-help" is an inadequate translation of swaraj, the term Gandhi used to designate his program of personal and village independence. He was a great social thinker who identified profound human imperatives and natural social potentials. He discerned how significant changes arise from people themselves, rather than from efforts on the part of governments to fine-tune the system.

South Africa and Eastern Europe are two modern examples of change from the bottom up. Perceptions shift, the old notions cannot hold - and down comes the state and its ideology. Similar changes are brewing

despite repressions in Central America. In the United States, the economy appears to be holding up by force of habit and inertia in the face of unimaginable debt, while city governments break down and thousands of families sleep in makeshift shelters.

Not without protest. In the United States, the tireless voices of Ralph Nader, Noam Chomsky, Jerry Brown and other cogent dissidents remind us and our legislators and judges that our so-called civilisation is using up the world. Such spokespeople for conservation, social justice and peace help to organise opposition to benighted powers and their policies, and thus divert the most outrageous programs to less flagrant alternatives.

Like Ariyaratne and Sivaraksa in their social contexts, we as Western Buddhists would also modify the activist role in our own contexts to reflect our culture as well as our spiritual heritage. But surely the Dhammic fundamentals would remain. Right Action is part of the Eightfold Path that begins and ends with Right Meditation. Formal practice would also involve study, reciting the ancient texts together, Dhamma discussion, religious festivals, and sharing for mutual support. (3)

In our workaday lives, practice would be less formal, and could include farming and protecting forests. In the United States, some of our leading intellectuals cultivate the ground. The distinguished poet W.S. Merwin has through his own labour created an aboretum of native Hawaiian plants at his home on Maui. He is thus restoring an important aspect of Hawaiian culture, in gentle opposition to the monocultures of pineapple, sugar and macadamia nut trees around him. Another progressive intellectual, Wendell Berry, author of some thirty books of poetry, essays and fiction, is also a small farmer. Still another reformative intellectual and prominent essayist, Wes Jackson, conducts a successful institute for small farmers. Networking is an important future of Jackson's teaching. He follows the Amish adage that at least seven co-operating families must live near each other in order for their small individual farms to succeed. (4)

All such enterprise takes hard work and character practice. The two go

together. Character, Schumacher says, "is formed primarily by a man's work. And work, properly conducted in conditions of human dignity and freedom, blesses ourselves and equally our products." (5) With dignity and freedom we can collaborate, labour together, on small farms and in co-operatives of all kinds - savings and loan societies, social agencies, clinics, galleries, theatres, markets and schools - forming networks of decent and dignified modes of life alongside and even within the frames of conventional power. I visualise our humane network having more and more appeal as the power structure continues to fall apart.

This collaboration in networks of mutual aid would follow from our experience of paticca-samuppada, depend origination or co-dependent arising. All beings arise in systems of biological affinity, whether or not they are even alive in a narrow sense. We are born in a world in which all things nurture us. As we mature in our understanding of the Dhamma, we take responsibility for paticca-samuppada and continually divert our infantile expectations of not being nurtured to an adult responsibility for nurturing others.

Buddhadassa Bhikku says: The entire cosmos is a cooperative. The sun, the moon, and the stars live together as a cooperative. The same is true for humans and animals, trees and soil. Our bodily parts function as a cooperative. When we realise that the world is a mutual interdependent, cooperative enterprise, that human beings are all mutual friends in the process of birth, old age, suffering and death, then we can build a noble, even heavenly environment. If our lives are not based in this truth, then we shall all perish. (6)

Returning to this original track is the path of individuation that transforms childish self-centredness to mature views and conduct. With careful, constant discipline on the Eight-Fold Noble Path of the Dhamma, greed becomes dana, exploitation becomes networking. The root-brain of the newborn becomes the compassionate, religious mind of the elder. Outwardly the elder does not differ from other members; her or his needs for food, clothing, shelter, medicine, sleep and affection are the same as for anyone else. But the smile is startlingly generous.

It is a smile that rises from the Buddha's own experience. Paticca-samuppada is not just a theory, but the profound realisation that I arise with all beings, and all beings arise with me. I suffer with all beings; all beings suffer with me. The path to this fulfilment is long, sometimes hard and involves restraint and disengagement from ordinary concerns. It is a path that advances over plateaus on its way, and it is important not to camp too long on any one plateau. It is not yet your true home.

Dhammic society begins and prevails with individuals walking this path of compassionate understanding, discerning the noble option at each moment and allowing the other options to drop away. It is a society that looks familiar, with cash registers and merchandise, firefighters and police, theatres and festivals, but the inner flavour is completely different. Like a Chinese restaurant in Madras, the decor is familiar but the curry is surprising.

In the United States of America, the notion of compassion as the touchstone of conduct and livelihood is discouraged by the culture. Yet here and there one can find Catholic Workers feeding the poor, religious builders creating housing for the homeless, traditional people returning to their old ways of agriculture.

Small is the watchword. Huge is ugly, as James Hillman has pointed out. (7) Huge welfare goes awry, huge housing projects become slums worse than the ones they replace, huge environmental organisations compromise with their own principles in order to survive, huge sovereignty movements fall apart with internal dissension. The point is that huge anything collapses, including governments, banks, multi-national corporations and the global economy itself - because all things collapse. Small can be fluid, ready to change.

The problem is that the huge might not collapse until it brings everything else down with it. Time may not be on the side of the small. Our awareness of this unprecedented danger impels us to take stock and do what we can with our vision of a Dhammic society.

The traditional Sangha serves as a model for enterprise in this vision. A like-minded group of five can be a Sangha. It can grow to a modest size, split into autonomous groups and then network. As autonomous lay Buddhist associations, these little communities will not be Sanghas in the classical sense, but will be inheritors of the name and of many of the original intentions. They will also be inheritors of the Base Community movements in Latin America and the Philippines - Catholic networks that are inspired by traditional religion and also by l9th century anarchism. (8) Catholic Base Communities serve primarily as worship groups, study groups, moral support societies, and nuclei for social action. They can also form the staff and support structure of small enterprises. The Catholic Base Community is grounded in Bible study and discussions. In these meetings, one realises for oneself that God is an ally of those who would liberate the poor and oppressed. This is Liberation Theology of the heart and gut. It is an internal transformation that releases one's power to labor intimately with others to do God's work (9)

The Buddhist counterpart of Bible study would be the contemplation and realisation of paticca-samuppada, of the unity of such intellectual opposites as the one and the many found in Zen practice, and the interdependence presented in the sacred texts, such as the Hua-yen ching (10). Without a literal God as an ally, one is thrown back on one's own resources to find the original track, and there one finds the ever shifting universe with its recurrent metaphors of interbeing to be the constant ally.

There are other lessons from Liberation Theology. We learn that we need not quit our jobs to form autonomous lay Sanghas. Most Base Communities in Latin America and the Philippines are simply groups that have weekly meetings. In Buddhist countries, co-workers in the same institution can come together for mutual aid and religious practice. In the largest American corporations, such as IBM, there will surely be a number of Buddhists who could form similar groups. Or we can organise co-housing arrangements that provide the sharing of home maintenance, child-care and transportation that can free up individuals for their turns at meditation, study and social action. Buddhist Peace Fellowship chapters might consider how the Base

Community design and ideal could help to define and enhance their purposes and programmes.

Of course, the collapse if any is not going to happen tomorrow. We must not underestimate the staying power of capitalism. Moreover, the complex, dynamic process of networking cannot abruptly be put into place. In studying Mondragon, the prototype of large, dynamic cooperative enterprise in the three Basque counties of northern Spain, William and Kathleen Whyte countered more than a hundred worker co-operatives and supporting organisations with l9,500 workers in l988. These are small, even tiny enterprises, linked by very little more than simple goodwill and a profound sense of the common good. Together they form a vast complex of banking, industry and education which evolved slowly, if steadily from a single class for technical training set up in l943. (11) We must begin with our own training classes. Mondragon is worth our study, as are the worker-owned industries closer to home - for example, the plywood companies in the Pacific Northwest. In l972, Carl Bellas studied 21 such companies whose inner structures consisted of motivated committees devoted to the many aspects of production, and whose managers were responsible to a general assembly. (12)

In the course of our training classes, it is also essential that we examine the mechanism of the dominant economy. Usury and its engines have built our civilisation. The word "usury" has an old meaning and a modern one. In the spirit of the old meaning of usury - lending money at interest - the banks of the world, large and small, have provided a way for masses of people for many generations across the world to own homes and to operate farms and businesses. In the spirit of the modern meaning of usury, however - the lending of money at excessive interest - a number of these banks have become gigantic, ultimately enabling corporations almost as huge to squeeze small farmers from their lands, small shopkeepers from their stores and to burden homeowners with car and appliance payments and lifetimes mortgages.

For over 1800 years, the Catholic Church had a clear and consistent doctrine on the sin of usury in the old sense of simply lending money

at interest. Nearly 30 official church documents were published over the centuries to condemn it. Out of the other side of the Vatican, however, came an unspoken tolerance for usury so long as it was practised by Jews. The Church blossomed as the Medici family of bankers underwrote the Renaissance, but at the same time, pogroms were all but sanctioned. The moral integrity of the Church was compromised. Finally, early in the l9th century, this kind of hypocrisy was abandoned - too late in some ways, for the seeds of the Holocaust were planted. Today the Pope apologises to the Jews, and even the Vatican has its bank. (13) Usury in both old and modern implications is standard operating procedure in contemporary world culture.

Like the Medicis, however, modern bankers can be philanthropic. In almost every city in the United States, bankers and their institutions are active in support of museums, symphony orchestras, clinics and schools. Banks have almost the same social function as traditional Asian temples: looking after the poor and promoting cultural activities. This is genuine beneficence, and it is also very good public relations.

In the subdivisions of some American cities, such as the Westwood suburb of Los Angeles, the banks even look like temples. They are indeed the temples of our socio-economic system. The banker's manner is friendly yet his interest in us is, on the bottom line, limited to the interest he extracts from us.

One of the banks on Hawai'i has the motto, "We say 'Yes' to you", meaning "We are eager for your money". Their motto is sung interminably on the radio and TV, and when it appears in newspapers and magazines we find ourselves humming the tune. Similar light-weight yet insidious persuasions are used with third-world governments for the construction of freeways and hydro-electric dams and administrative skyscrapers.

Governments and developers in the Third World are, in fact, the dupes of the World Bank and the International Monetary Fund:

It is important to note that IMF programmes are not designed to increase the welfare of the population. They are designed to bring the external payments account not balance...The IMF is the ultimate guardian of the interests of capitalists and bankers doing international business. (14)

These are observations of the economist Kari Polyani Levitt, quoted as the epigraph of a study entitled Banking on Poverty. The editor of this work concludes that policies of the IMF and the World Bank "make severe intrusions upon the sovereign responsibilities of many governments of the Third World. These policies not only often entail major additional cuts in the living standards of the poorest sectors of Third World societies, but are also unlikely to produce the economic results claimed on their behalf." (15)

Grand apartment buildings along the Bay of Bombay show that the First World with its wealth and leisure is alive and well among the prosperous classes of the old Third World. The Third World with its poverty and disease flares up in cities and farms of the old First World. In The Prosperous Few and the Restless Many, Noam Chomsky writes:

In l971, Nixon dismantled the Bretton Woods system, thereby deregulating currencies. (16) That, and a number of other changes, tremendously expanded the amount of unregulated capital in the world and accelerated what's called the globalization of the economy. That's a fancy way of saying that you can export jobs to high-repression, low-wage areas. (17)

Factories in South Central Los Angeles moved to Eastern Europe, Mexico and Indonesia, attracting workers from farms. Meantime, victims in South Central Los Angeles and other depressed areas of the United States, including desolate rural towns, turn in large numbers to crime and drugs to relieve their seemingly hopeless poverty. One million American citizens are currently in prison, with another two million or so on parole or probation. More than half of these have been convicted of drug-related offences. (18) It's going to get worse. Just as the citizens of Germany elected Hitler Chancellor in l932,

opening the door to fascism quite voluntarily, so the citizens of the United States have elected a Congress that seems bent on creating a permanent underclass, with prison expansion to provide much of its housing.

Is there no hope? If big banks, multi-national corporations and co-operating governments maintain their strategy to keep the few prosperous and the many in poverty, then where can small farmers and shopkeepers and managers of clinics and social agencies turn to for the money they need to start up their enterprises and to meet emergencies? In the United States, government aid to small businesses and farms, like grants to clinics and social agencies, is being cut back. Such aid is meagre or non-existent in other parts of the world, with notable exceptions in northern Europe.

Revolving credit associations called hui in China, kye in Korea and tanamoshi in Japan have for generations down to the present provided start-up money for farmers and small businessmen, as well as short-term loans for weddings, funerals and tuition. In Siam there are rice banks and buffalo banks designed for sharing resources and production among the working poor. (19) The Grameen banks of Bangladesh are established for the poor by the poor. Shares are very tiny amounts, amounting to the equivalent of just a few dollars, but in quantity they are adequate for loans at very low interest to farmers and shopkeepers. (20)

Similar traditional co-operatives exist in most other cultures. Such associations are made up of like-minded relatives, friends, neighbours, co-workers or alumnae. Arrangements for borrowing and repayment among these associations differ, even within the particular cultures. (21) In the United States, co-operatives have been set up outside the system, using scrip and labor credits, most notably, Ithaca Hours, involving 1,200 enterprises. (22) The basic currency in the latter arrangement is equal to $10.00, considered to be the hourly wage. It is guaranteed by the promise of work by members of the system.

We can utilise such models and develop our own projects to fit our

particular requirements and circumstances. We can stand on our own feet and help one another in systems that are designed to serve the many, rather than to aggrandise the wealth of the few.

Again, small is beautiful. Whereas large can be beautiful too, if it is a network of autonomous units, monolithic structures are problematic even when fuelled by religious idealism. Islamic economists theorise about a national banking system that functions by investment rather than by a system of interest. However, they point out that such a structure can only work in a country where laws forbid lending at interest, and where administrators follow up violations with prosecution. (23) So, for those of us who do not dwell in certain Islamic countries which seek to take the Koran literally, such as Pakistan and some of the Gulf States, the macrocosmic concept of interest-free banking is probably not practical.

Of course, revolving credit association have problems, as do all societies of human beings. There are defaults, but peer pressure among friends and relatives keep these to a minimum. The discipline of Dhamma practice would further minimise such problems in a Buddhist loan society. The meetings could be structured with ritual and Dhamma talks to remind the members that they are practising the virtues of the Buddha Dhamma and bringing paticca-samuppada into play in their workaday lives. They are practising trust, for all beings are the Buddha, as Hakuin Zenji and countless other teachers remind us. (24) Surely only serious emergencies would occasion a delinquency, and contingency planning could allow for such situations.

Dhamma practice could also play a role in the small Buddhist farm or business enterprise. In the l970s, under the influence of Buddhists, the Honest Business movement arose in San Fransisco. This was a network of small shops whose proprietors and assistants met from time to time to encourage one another. Their policy was to serve the public, and to accept enough in return from their sales to support themselves, sustain their enterprises and pay the rent. Their account books were on the sales counters, open to their customers. (25)

The movement itself did not survive, though progressive businesses

here and there continue the practice of opening their account books to customers. (26) Apparently the Honest Business network was not well-enough established to endure the change in culture from the New Age of the l970s to the pervasive greed of the l980s. I suspect there was not a critical mass in the total number of shops involved, and many of them might have been on their commercial appeal. Perhaps religious commitment was not particularly well-rooted. Perhaps also there was not the urgency for alternatives that might be felt in the Third World - an urgency that will surely be felt in all worlds as the dominant system continues to use up natural resources. (27) In any case, we can probably learn from the Honest Business movement, and avoid its mistakes. In establishing small enterprises - including clinics and social agencies and their networks - it is again important not to be content with a plateau. The ordinary entrepreneur, motivated by the need to support a family and plan for tuition and retirement, scrutinises every option and searches out every niche for possible gain. The manager of an Honest Business must be equally diligent, albeit motivated by service as well as for the family.

Those organising to lobby for political and economic reforms must also be diligent in following through. The Base Communities throughout the archipelago that forms the Philippines brought down the despot Ferdinand Marcos, but the new society wasn't ready to fly, and was put down at once. The plateau was not the peak, and euphoria gave way to feelings of betrayal. However, you can be sure that many of these little communities are still intact and in place. Their members have learnt from their immediate history, and continue to struggle for justice.

A. J. Muste, the great Quaker organiser of the mid-20th century, is said to have remarked, "There is no way to peace; peace is the way." For our purposes, I would reword his pronouncement, "there is no way to a just society; our just societies are the way". Moreover, there is no plateau to rest upon, only the inner rest we feel in our work and in our formal practice.

This inner rest is so important. In the short history of the United States, there are many accounts of utopian societies. Almost all of

them are gone - some of them lasted only a few weeks. Looking closely, I think we can find that many of them fell apart because they were never firmly established as religious communities. They were content to organise before they were truly organised.

Families fall apart almost as readily as intentional communities these days, and Dhamma practice can play a role in the household as well as in the Sangha. As Sulak Sivaraksa has said, "When even one member of the household meditates, the entire family benefits." (28) Competition is channelled into the development of talents and skills, greed is channelled into the satisfaction of fulfilment in work. New things and new technology are used appropriately, and are not allowed to divert time and energy from the path of individuation and compassion.

New things and new technology are very seductive. When I was a little boy, I lived for a time with my grandparents. These were the days before refrigerators, and we were too far from the city to obtain ice. So, under an oak tree outside the kitchen door, we had a cooler - a kind of cupboard made mostly of screen, covered with burlap, and watered with a clever drip arrangement from the top. Evaporation from the burlap cover kept the contents of the cupboard cool, the milk fresh, and the butter firm. We didn't need a refrigerator. I can only assume that the reason my grandparents ultimately purchased one in later years was because they were persuaded by advertisements and by their friends.

We too can have coolers just outside the kitchen door, or on the apartment verandah, and save the money the refrigerator would cost to help pay for the education of our children. Like our ancestors, we too can walk, or take public transport. We can come together like the Amish and build houses for one another. We can join with our friends and offer rites of passage to sons and daughters in their phase of experimenting and testing the limits of convention.

Our ancestors planned for their descendants, otherwise we might not be here. Our small lay Buddhist societies can provide a structure for Dhamma practice, as well as precedent and flexible structures for our

descendants to practice the Dhamma in turn, for the next ten thousand years.

In formally sustaining the Dhamma, we can also practice sustainable agriculture, sustainable tree farming, sustainable enterprise of all kinds. Our ancestors sustain us, we sustain our descendants. Our family members and fellow-workers nurture us, and we nurture them - even as dana was circulated in ancient times.

Circulating the gift, the Buddhist monk traditionally offers the Dhamma, as we offer him food, clothing, shelter and medicine. But he is also a bachelor. Most of us cannot be itinerant mendicants. Yet as one who has left home, the monk challenges us to leave home as well - without leaving home. There are two meanings of "home" here. One could be the home of the family; the other may involve the family, but is also the inner place of peace and rest, where devotion to the Buddha way of selflessness and affection is paramount. The monks and their system of dana are, in fact, excellent metaphorical models for us. The gift is circulated, enhancing character and dignity with each round. Festivals to celebrate the rounds bring joy to the children and satisfaction to the elders.

I don't suggest that the practice of circulating the gift will be all sweetness and light. The practice would also involve dealing with mean-spirited imperatives, in oneself and in others. The Buddha and his elder leaders made entries in their code of vinaya after instances of conduct that were viewed as inappropriate. Whether the Buddhist Base Community is simply a gathering of like-minded followers of the Dhamma that meets for mutual support and study, whether it has organised to lobby for justice, or whether it conducts a business, manages a small farm or operates a clinic, the guidelines must be clear. General agreements about what constitutes generous conduct and procedure will be valuable as references. Then, as seems appropriate, compassionate kinds of censure for departing from those standards could gradually be set into place. Guidelines should be set for conducting meetings, for carrying out the work and for networking. There must be teaching, ritual and sharing. All this comes with trial and error, with precedent as a guide but not a dictator.

Good will and perseverance can prevail. The rounds of circulating the gift are as long as ten thousand years, as brief as a moment. Each meeting of the little Sangha can be a renewal of practice; each work day a renewal of practice, each encounter, each thought-flash. At each step of the way we remember that people and indeed the many beings of the world are more important than goods.

projection. The systemic illness of Western society that has infected the world arises direc
neglect of perennial values that Buddhism shares with other religions, so when we speak, w
with language that is common to all and with actions that resonate across sectarian lines.Th
Buddhism in the West should, I think, recall the perspective of the Buddha in a relevant man
people. Most people tend to get locked into a quite dreary round of tasks, and experience l
harmony. Yet if Nirvana and Samsara are the same, we must find upayas that can keep su
times.For this there are three options for meditative practice within the Zen tradition. The fi
practice, the second is shikantaza or "pure sitting", and the third is the way of mindfulness th
and mantras. These three ways inform each other, and can be combined or blended. The
these options, or two or the three of them together - reflects the karma, personality and aspi
student and teacher.Koans can be called arcana, points of quest, matters to be made clear
the dark night of the spirit, and release the self from its limited preoccupations. The points a
during periods of withdrawal, some no longer than a single breath, some for extended perio
concentration fuelled by a profound questioning spirit.The essence of this meditative practic
shikantaza, which is pure sitting, not merely sitting. I hear shikantaza described as watchin
come, identifying them, and letting them go. I don't think this is adequate. Shikantaza is a
sinking into one's bones and sinews and facing the bare emptiness of the mind. This mind
outside - neither inside or outside. The third meditative option, the path of mindfulness thro
and mantras is exemplified by the teaching of Thich Nhat Hanh. Repeating the verse:Brea
body and mind;Breathing out, I smile;Dwelling in the present moment,I know this is the only
moment.you are brought to your breath and to the personal realisation that all beings are in
beginning with yourself. Acknowledging your need to mature and to understand, acknowle
mistakes, it is all right to be where you are now in your practice. In my view, the practice o
Buddhism in the future must include all three of these options. I do not list them in order of
because all are important and they depend upon each other. First, there is the practice of f
arcana and experiencing the primordial truths of purity, harmony and variety; second, there
of grounding this focus in the empty, silent samadhi of the vast and boundless universe; a
the practrice of using reminders that keep the lotus of the Buddha Dharma blooming in the
demands of our busy lives.All this in a setting of a Buddha Sangha that is not preoccupied w
identity, that holds ceremonies of refuge, accepting precepts and renewing of vows, that see
communication possible, and reaches outward into the larger community. This is for me an

THE SECOND PARAMITA

BY

Robert Aitken, Roshi

This text addresses some of the most fundamental and delicate religious issues. Therefore, it should be read, quoted and analysed in a mindful way.

Originally published in MOON MIND CIRCLE, Summer 1987 pp.1-5.

Copyrights (c) by Robert Aitken and Sydney Zen Center

SHILA

Shila is the mnemonic listing of precepts, and by extension it is Vinaya, the moral way. Vinaya is the first of the "Three Baskets" or Tripitaka, the Buddhist canon, the others being Sutra and Abhidharma, the teachings and the commentaries. Formally becoming a Buddhist is a matter of accepting the precepts in the ceremony called Jukai. To understand how morality and Buddhism go together, it is probably best to review the Buddhist teaching itself briefly:

The basic teaching of the Buddha is that there is no abiding self. Our

being is made up of and constantly depends upon other people, animals, plants, soil, water, air, the planet earth, the other planets, the sun, moon and stars. Our very genes are programmes provided to us by our ancestors and from unknown sources back to the earliest green slime and before. Nothing is my own and everything makes me up: my parents, grandparents - the birdsong, portraits by Rembrandt, the scent of the Puakenikeni, and the laughter of a friend. Also forming my being are death in the family, the danger of biological holocaust, misunderstandings, and malicious gossip.

This formation that is me, flowing along, eating and adapting and adopting, is the same formation that is you, with very small variations in our combination of genes and experience that give us our uniqueness. This uniqueness is our own personal potential, and we depend upon each other for sustenance to fulfill it.

Each centre in our multi-centred universe is dependent in this way. Nothing abides and we find that everything is fundamentally insubstantial -- shunyata, emptiness. It is not a vacuum that we perceive, but the absence of a fixed self in ourselves and in the multitudinous things of the universe. With this perception, or with an understanding that such an experience is possible, we glimpse the Dharma: the peace of the fathomless void and the harmony of the many centres as they flow about and through each other - out there and as this 'me'.

We also perceive misuse of harmony as habitats are destroyed, nations threatened, childlren and spouses abused and friends slandered.

The Ten Grave Precepts, which make up Shila for the Zen student, are ten ways to prompt our awareness of the Dharma, the peace and great harmony of life and death that is our universe. They not only prompt our awareness, they are expressions of perfection in the Dharma. Each precept is a paramita.

The Ten Grave Precepts.

I. I take up the way of not killing. This First Precept echoes the

first of our Great Vows for All, "Though the many beings are numberless, I vow to save them." The Precept is specific and negative in wording; the Vow is universal and positive. The emphasis in the Precept is upon protection and nurturing: the emphasis in the Vow is upon spiritual encouragement. Both are expressions of perfections: both enhance the process of perfection.

Usually, nurturing a specific being is clearly also a matter of saving the universe, but sometimes options of abortion, spraying bugs, and trapping rats seem to offer ways to keep the world organism thinned and healthy. Such issues can becone agonizingly difficult, and it is tempting to make decisions on the basis of persuasive arguments that are over-simple and reductive. They are koans and must be faced with a clear sense of proportion.

Decisions about the quantitatively larger issue of war and peace have been clarified by the unprecedented technological capacity for killing which science has achieved. There is no longer an argument for a "just war", or for "mutually assured deterence". Incredibly murderous weapons are prepared to destroy all human life and almost all animal and plant life. The koan here is how to speak out appropriately and take action that is instructive in opposition to such weapons and their so-called rationale.

Less obvious, but no less dangerous, is the probability of biological disaster through the destruction of forests, meadows, wetlands, lakes, rivers, seas, and the air. I vow to moderate my lifestyle and reduce its demands, and to encourage you to do the same, for the protection of all beings in their infinite variety.

2. I take up the way of not stealing. This and all the subsequent Precepts are variants of the first, "Not Killing". "I take up the way of not stealing" means I will respect the order of things - the paramita of harmony.

Peasants who occupy unused private land in Central America are demonstrating their view of the fundamental order. "We are taking what is rightfully ours", they say. The landlords say they are stealing.

The question is, which view kills? Which view gives life?

3. I take up the way of not misusing sex. Sexual intercourse is misused when it is an addiction rather than the peak experience of love between a committed couple. All the Precepts point to addictive behalviour, stealing, lying, using alcohol or drugs, slandering, even killing. Addiction reveals a lack of confidence, a need for something from others, the interdependence of all things inverted for just one being. It is no good condemning promiscuity as immoral behaviour, for it is only a symptom of general immaturity. Like anybody else, the addict needs guidance to find a way to forget the self.

4. I take up the way of not speaking falsely. Speaking falsely is also killing, and specifically, killing the Dharmna. The lie is set up to defend the idea of a fixed entity, a self image, a concept, or an institution. I want to be known as warm and compassionate, so I deny that I was cruel, even though somebody got hurt. Sometimes I must lie to protect someone or large numbers of people, animals, plants and things from getting hurt, or I believe I must. What is the big picture? "Buddha nature pervades the whole universe." 1

5. I take up the way of not using drink or drugs. This can be extended to anything that clouds the mind: silly conversation, noisy music, most TV programmes. But Buddhism is not absolute. A little wine warms my bones and relaxes my inhibitions, and casual conversation enhances my humanity and the humanity of others. This Precept is warning against addiction and dependency. When I am completely honest at the very source of my thoughts, what is the path of the Buddha?

6. I take up the way of not discussing faults of others. Again, this Precept too deals with an aspect of killing. More people get hurt by gossip than by guns. The point is that nobody has a fixed character. Everyone has tendencies, and those tendencies can be used or misused, read or misread. The tendency to be accomodating can be seen negatively as passivity, and positively as patience. Encourage the tendency, and it will find its own perfection.

7. I take up the way of not praising myself while abusing others. The

reason I praise myself and abuse others is that I seek to justify and defend myself as a certain kind of rather superior being.

Actually, I am not superior or inferior. My actions and words are appropriate or inappropriate to the needs of people, animals, plants and things, including myself. If I am authoritarian and put myself up and others down, then I am not meeting their need to grow and mature or my own to listen and learn. The Buddha Dharma is obscured. The world suffers.

8. I take up the way of not sparing the Dharma assets. The Dharma assets are all phenomena in their precious uniqueness, the interdependence of everything in perfect harmony, and the absence of any abiding self. When I am not stingy with the Dharma assets, I conduct myself and say things that enhance my own understanding of uniqueness, harmony and peace - and understanding on the part of others, so that my family members, friends and everyone and everything can maintain their path of perfection. Another way to say this is: I conduct myself so that the original perfection becomes more and more clear to all beings.

9. I take up the way of not indulging in anger. You and I have had the experience in sesshin of bathing in anger. Something unreasonably tiny, perhaps something you don't even notice, punctures a nasty bubble of angry gas, and you sit there playing out scenarios of retribution. Perhaps you blame yourself for this condition, but it is needless blame, and it only adds to the confusion. Even such a nightmare of anger is not a violation of this Precept, because if you are sincere, you return to the practice whenever you possibly can. Anger itself is the field of your practice, and you pursue the little puck Mu on that field.

Blake says, "the tygers of wrath are wiser than the horses of instruction." Kwan-yin hurls a thunderbolt of anger from time to time. Indulgence in anger is the addiction, and it rests upon pain. What is it that troubles you?

l0. I take up the way of not slandering the Three Treasures. The Three Treasures are the Buddha, the Dharma, and the Sangha. These are variously the Historical Buddha, his teaching, and the fellowship of his

followers - and realisation, the path to realisation, and the harmony of all beings. Slandering such Treasures is belittling them, and the grossest kind of belittling is conceptual analysis that reduces and quantifies - obscuring the unknown and unknowable source, the marvellous subtlety of the Buddha's words and the words of his great followers, the synchronicity and symmetry of experience, and the precious nature and aspiration of each individual person, animal or plant.

I take up the Ten Precepts of the disciples of Shakyamuni Buddha, and I invite you to join me.

THE TEN GRAVE PRECEPTS.

l. I take up the way of not killing.
2. I take up the way of not stealing.
3. I take up the way of not misusing sex.
4. I take up the way of not speaking falsely.
5. I take up the way of not using drink or drugs.
6. I take up the way of not discussing faults of others.
7. I take up the way of not praising myself while abusing others.
8. I take up the way of not sparing the Dharma assets.
9. I take up the way of not indulging in anger.
l0. I take up the way of not slandering the Three Treasures.

THE SEVEN STEPS

From Method 2 of "Keeping the Breath in Mind", by Ajaan Lee Dhammadharo, Thanissaro Bhikkhu, trans.

There are seven basic steps:

1. Start out with three or seven long in-and-out breaths, thinking bud- with the in-breath and dho with the out. Keep the meditation syllable as long as the breath.

2. Be clearly aware of each in-and-out breath.

3. Observe the breath as it goes in and out, noticing whether it's comfortable or uncomfortable, broad or narrow, obstructed or free-flowing, fast or slow, short or long, warm or cool. If the breath doesn't feel comfortable, change it until it does. For instance, if breathing in long and out long is uncomfortable, try breathing in short and out short. As soon as you find that your breathing feels comfortable, let this comfortable breath sensation spread to the different parts of the body.

To begin with, inhale the breath sensation at the base of the skull and let it flow all the way down the spine. Then, if you are male, let it spread down your right leg to the sole of your foot, to the ends of your toes, and out into the air. Inhale the breath sensation at the base of the skull again and let it spread down your spine, down your left leg to the ends of your toes and out into the air. (If you are female, begin with the left side first, because the male and female nervous systems are different.)

Then let the breath from the base of the skull spread down over both shoulders, past your elbows and wrists, to the tips of your fingers and out into the air.

Let the breath at the base of the throat spread down the central nerve at the front of the body, past the lungs and liver, all the way down

to the bladder and colon.

Inhale the breath right at the middle of the chest and let it go all the way down to your intestines.

Let all these breath sensations spread so that they connect and flow together, and you'll feel a greatly improved sense of well-being.

4. Learn four ways of adjusting the breath:
   a. in long and out long
   b. in short and out short,
   c. in short and out long,
   d. in long and out short.

Breathe whichever way is most comfortable for you. Or, better yet, learn to breathe comfortably all four ways, because your physical condition and your breath are always changing.

5. Become acquainted with the bases or focal points of the mind--the resting spots of the breath--and center your awareness on whichever one seems most comfortable. A few of these bases are:
   a. the tip of the nose,
   b. the middle of the head,
   c. the palate,
   d. the base of the throat,
   e. the breastbone (the tip of the sternum),
   f. the navel (or a point just above it).

If you suffer from frequent headaches or nervous problems, don't focus on any spot above the base of the throat. And don't try to force the breath or put yourself into a trance. Breathe freely and naturally.
Let the mind be at ease with the breath--but not to the point where it slips away.

6. Spread your awareness--your sense of conscious feeling--throughout the entire body.

7. Coordinate the breath sensations throughout the body, letting them

flow together comfortably, keeping your awareness as broad as possible. Once you are fully aware of the aspects of the breath you already know in your body, you'll come to know all sorts of other aspects as well. The breath, by its nature, has many facets: breath sensations flowing in the nerves, those flowing around and about the nerves those spreading from the nerves to every pore. Beneficial breath sensations and harmful ones are mixed together by their very nature.

To summarize: (a) for the sake of improving the energy already existing in every part of your body, so that you can contend with such things as disease and pain; and (b) for the sake of clarifying the knowledge already within you, so that it can become a basis for the skills leading to release and purity of heart--you should always bear these seven steps in mind, because they are absolutely basic to every aspect of breath meditation. When you've mastered them, you will have cut a main road. As for the side roads--the incidentals of breath meditation--there are plenty of them, but they aren't really important. You'll be perfectly safe if you stick to these seven steps and practice them as much as possible.

ANAPANA SATI:

Meditation on Breathing

ANAPANA SATI

Homage to the Blessed One, Accomplished and Fully Enlightened

Anapana sati, the meditation on in-and-out breathing, is the first subject of meditation expounded by the Buddha in the Maha Satipatthana Sutta, the Great Discourse on the Foundations of Mindfulness. The Buddha laid special stress on this meditation, for it is the gateway to enlightenment and Nibbana adopted by all the Buddhas of the past as the very basis for their attainment of Buddhahood. When the Blessed One sat at the foot of the Bodhi Tree and resolved not to rise until he had reached enlightenment, he took up anapana sati as his subject of meditation. On the basis of this, he attained the four jhanas, recollected his previous lives, fathomed the nature of samsara, aroused the succession of great insight knowledges, and at dawn, while 100,000 world systems trembled, he attained the limitless wisdom of a Fully Enlightened Buddha.

Let us then offer our veneration to the Blessed One, who became a peerless world-transcending Buddha through this meditation of anapana sati. May we comprehend this subject of meditation fully, with wisdom resplendent like the sun and moon. Through its power may we attain the blissful peace of Nibbana.

The Basic Text

Let us first examine the meaning of the text expounded by the Buddha on anapana sati. The text begins:

> "Herein, monks, a monk who has gone to the forest,
> or to the foot of a tree, or to an empty place,
> sits down cross legged, holding his back erect,

arousing mindfulness in front of him."

This means that any person belonging to the four types of individuals mentioned in this teaching--namely, bhikkhu (monk), bhikkhuni (nun), upasaka (layman) or upasika (laywoman)--desirous of practising this meditation, should go either to a forest, to the foot of a secluded tree, or to a solitary dwelling. There he should sit down cross-legged, and keeping his body in an erect position, fix his mindfulness at the tip of his nose, the locus for his object of meditation.

If he breathes in a long breath, he should comprehend this with full awareness. If he breathes out a long breath, he should comprehend this with full awareness. If he breathes in a short breath, he should comprehend this with full awareness. if he breathes out a short breath, he should comprehend this with full awareness.

"He breathes in experiencing the whole body, he breathes out experiencing the whole body": that is, with well-placed mindfulness, he sees the beginning, the middle and the end of the two phases, the in-breath and the out-breath. As he practises watching the in-breath and the out breath with mindfulness, he calms down and tranquilizes the two functions of in breathing and out-breathing.

The Buddha illustrates this with a simile. When a clever turner or his apprentice works an object on his lathe, he attends to his task with fixed attention: in making a long turn or a short turn, he knows that he is making a long turn or a short turn. In the same manner if the practitioner of meditation breathes in a long breath he comprehends it as such; and if he breathes out a long breath, he comprehends it as such; if he breathes in a short breath, he comprehends it as such; and if he breathes out a short breath, he comprehends it as such. He exercises his awareness so as to see the beginning, the middle and the end of these two functions of breathing in and breathing out. He comprehends with wisdom the calming down of these two aspects of in-breathing and out-breathing.

In this way he comprehends the two functions of in-breathing and

out-breathing in himself, and the two functions of in breathing and out-breathing in other persons. He also comprehends the two functions of in-breathing and out-breathing in himself and in others in rapid alternation. He comprehends as well the cause for the arising of in-breathing and out-breathing, and the cause for the cessation of in breathing and out-breathing, and the moment-by-moment arising and cessation of in-breathing and out-breathing.

He then realizes that this body which exercises the two functions of in-breathing and out-breathing is only a body, not an ego or "I." This mindfulness and wisdom become helpful in developing greater and more profound mindfulness and wisdom, enabling him to discard the erroneous conceptions of things in terms of "I" and "mine." He then becomes skilled in living with wisdom in respect of this body and he does not grasp anything in the world with craving, conceit or false views. Living unattached, the meditator treads the path to Nibbana by contemplating the nature of the body.

This is an amplified paraphrase of the passage from the Maha Satipatthana Sutta on anapana sati. This meditation has been explained in sixteen different ways in various suttas. Of these sixteen, the first tetrad has been explained here. But these four are the foundation for all the sixteen ways in which anapana sati can be practised.

The Preliminaries of Practice

~~~ ~~~~~~~~~~~~~~ ~~ ~~~~~~~~~

Now we should investigate the preliminary stages to practising this meditation. In the first place the Buddha indicated a suitable dwelling for practising anapana sati. In the sutta he has mentioned three places: the forest, the foot of a tree, or an isolated empty place. This last can be a quiet restful hut, or a dwelling place free from the presence of people. We may even consider a meditation hall an empty place. Although there may be a large collection of people in such a hall, if every one remains calm and silent it can be considered
~~~

an empty place.

The Buddha recommended such places because in order to practise anapana sati, silence is an essential factor. A beginning meditator will find it easier to develop mental concentration with anapana sati only if there is silence. Even if one cannot find complete silence, one should choose a quiet place where one will enjoy privacy.

Next the Buddha explained the sitting posture. There are four postures which can be adopted for meditation: standing, sitting, reclining and walking. Of these the most suitable posture to practise anapana sati at the beginning is the seated posture.

The person wishing to practise anapana sati should sit down cross-legged. For bhikkhus and laymen, the Buddha has recommended the cross-legged Position. This is not an easy posture for everyone, but it can be gradually mastered. The half cross-legged position has been recommended for bhikkhunis and laywomen. This is the posture of sitting with one leg bent. It would be greatly beneficial if the cross legged posture recommended for bhikkhus and laymen could be adopted in the "lotus" pattern, with the feet turned up and resting on the opposite thighs. If that is inconvenient, one should sit with the two feet tucked underneath the body.

In the practice of anapana sati, it is imperative to hold the body upright. The torso should be kept erect, though not strained and rigid. One can cultivate this meditation properly only if all the bones of the spine are linked together in an erect position. Therefore, this advice of the Buddha to keep the upper part of the body erect should be clearly comprehended and followed.

The hands should be placed gently on the lap, the back of the right hand over the palm of the left. The eyes can be closed softly, or left half-closed, whichever is more comfortable. The head should be held straight, tilted a slight angle downwards, the nose perpendicular to the navel

The next factor is the place for fixing the attention. To

cultivate anapana sati one should be clearly mindful of the place where the incoming and outgoing breaths enter and leave the nostrils. This will be felt as a spot beneath the nostrils or on the upper lip, wherever the impact of the air coming in and out the nostrils can be felt most distinctly. On that spot the attention should be fixed, like a sentry watching a gate.

Then the Buddha has explained the manner in which anapana sati has to be cultivated. One breathes in mindfully, breathes out mindfully. From birth to death this function of in-breathing and out-breathing continues without a break, without a stop, but since we do not consciously reflect on it, we do not even realize the presence of this breath. If we do so, we can derive much benefit by way of calm and insight. Thus the Buddha has advised us to be aware of the function of breathing.

The practitioner of meditation who consciously watches the breath in this manner should never try to control his breathing or hold back his breath with effort. For if he controls his breath or holds back his breath with conscious effort, he will become fatigued and his mental concentration will be disturbed and broken. The key to the practice is to set up mindfulness naturally at the spot where the in-breaths and the out-breaths are felt entering and leaving the nostrils. Then the meditator has to maintain his awareness of the touch sensation of the breath, keeping the awareness as steady and consistent as possible.

The Eight Steps

~~~ ~~~~~ ~~~~~

To help practitioners in developing this meditation, the commentators and meditation masters have indicated eight graduated steps in the practice. These eight steps will first be enumerated, and then they will be explained in relation to the actual meditative process.

The eight steps are named: counting (ganana); following (anubandhana);
~~~

contact (phusana); fixing (thapana); observing (sallakkhana); turning away (vivattana), purification (parisuddhi); and retrospection (patipassana). These eight cover the whole course of meditative development up to the attainment of arahatship.

(i) Counting

Counting is intended for those who have never before practised anapana sati. It is not necessary for those who have practised meditation for a considerable period of time. However, as it is expedient to have a knowledge of this, counting should be understood in the following manner.

When the meditator sits down for meditation, he fixes his attention at the tip of his nose and consciously attends to the sequence of in-and-out breathing. He notes the breath as it enters, and notes the breath as it leaves, touching against the tip of the nose or the upper lip. At this time he begins to count these movements.

There are a few methods of counting. The easiest is explained thus: The first breath felt is counted as "one, one"; the second as "two, two"; the third as "three, three"; the fourth as "four, four"; the fifth as "five, five" and so on up to the tenth breath which is counted as "ten, ten." Then he returns to "one, one" and continues again up to "ten, ten." This is repeated over and over from one to ten.

The mere counting is not itself meditation, but the counting has become an essential aid to meditation. A person who has not practised meditation before, finding it difficult to understand the nature of his mind, may think he is meditating while his mind runs helter skelter. Counting is an easy method to control the wandering mind.

If a person fixes his mind well on his meditation, he can maintain this counting correctly. If the mind flees in all directions, and he

misses the count, he becomes confused and thus can realize that his mind has wandered about. If the mind has lost track of the count, the meditator should begin the counting over again. In this way he should start the counting again from the beginning, even if he has gone wrong a thousand times.

As the practice develops, there may come a time when the in-breathing and out breathing take a shorter course and it is not possible to count the same number many times. Then the meditator has to count quickly "one", "two," "three," etc. When he counts in this manner he can comprehend the difference between a long in-breath and out-breath and a short in-breath and out-breath.

(ii) Following

"Following" means following the breath with the mind. When the mind has been subdued by counting and is fixed on the in-breathing and out-breathing, the counting is stopped and replaced by mentally keeping track of the course of the breath. This is explained by the Buddha in this manner:

> "When the meditator breathes in a long breath, he comprehends that he is breathing in a long breath; and when he is breathing out a long breath, he comprehends that he is breathing out a long breath."

Herein, one does not deliberately take a long in-breath or a long out-breath. One simply comprehends what actually takes place.

The Buddha has declared in the next passage that a meditator trains himself thinking: "I shall breathe in experiencing the whole body, and I shall breath out experiencing the whole body." Here, what is meant as "the whole body" is the entire cycle of breathing in and breathing out. The meditator should fix his attention so as to see the beginning, the middle and the end of each cycle of in-breathing and

out-breathing. It is this practice that is called "experiencing the whole body."

The beginning, middle and end of the breath must be correctly understood. It is incorrect to consider the tip of the nose to be the beginning of the breath, the chest to be the middle, and the navel to be the end. If one attempts to trace the breath from the nose through the chest to the belly, or to follow it out from the belly through the chest to the nose, one's concentration will be disrupted and one's mind will become agitated. The beginning of the in-breath, properly understood, is the start of the inhalation, the middle is continued inhalation, and the end is the completion of the inhalation. Likewise, in regard to the out breath, the beginning is the start of the exhalation, the middle is the continued exhalation, and the end is the completion of the exhalation. To "experience the whole body" means to be aware of the entire cycle of each inhalation and exhalation, keeping the mind fixed at the spot around the nostrils or on the upper lip where the breath is felt entering and leaving the nose.

This work of contemplating the breath at the area around the nostrils, without following it inside and outside the body, is illustrated by the commentaries with the similes of the gatekeeper and the saw.

Just as a gatekeeper examines each person entering and leaving the city only as he passes through the gate, without following him inside or outside the city, so the meditator should be aware of each breath only as it passes through the nostrils, without following it inside or outside the body.

Just as a man sawing a log will keep his attention fixed on the spot where the teeth of the saw cut through the wood, without following the movement of the teeth back and forth, so the meditator should contemplate the breath as it swings back and forth around the nostrils, without letting his mindfulness be distracted by the breath's inward and outward passage through the body.

When a person meditates earnestly in this manner, seeing the

entire process, a joyous thrill pervades his mind. And since the mind does not wander about, the whole body becomes calm and composed, cool and comfortable.

(iii) Contact and (iv) Fixing

These two aspects of the practice indicate the development of stronger concentration. When the mindfulness of breathing is maintained, the breathing becomes more and more subtle and tranquil. As a result the body becomes calm and ceases to feel fatigued. Bodily pain and numbness disappear, and the body begins to feel an exhilarating comfort, as if it were being fanned with a cool gentle breeze.

At that time, because of the tranquility of the mind, the breathing becomes finer and finer until it seems that it has ceased. At times this condition lasts for many minutes. This is when breathing ceases to be %felt%. At this time some be come alarmed thinking the breathing has ceased, but it is not so. The breathing exists but in a very delicate and subtle form. No matter how subtle the breathing becomes, one must still keep mindful of the contact (phusana) of the breath in the area of the nostrils, without losing track of it. The mind then becomes free from the five hindrances--sensual desire, anger, drowsiness, restlessness and doubt. As a result one becomes calm and joyful.

It is at this stage that the "signs" or mental images appear heralding the success of concentration. First comes the learning sign (uggaha-nimitta), then the counterpart sign (patibhaga-nimitta). To some the sign appears like a wad of cotton, like an electric light, a sliver chain, a mist or a wheel. It appeared to the Buddha like the clear and bright midday sun.

The learning sign is unsteady, it moves here and there, up and down. But the counterpart sign appearing at the end of the nostrils is steady, fixed and motionless. At this time there are no hindrances, the mind is most active and extremely tranquil. This stage is

expounded by the Buddha when he states that one breathes in tranquilizing the activity of the body, one breathes out tranquilizing the activity of the body.

The arising of the counterpart sign and the suppression of the five hindrances marks the attainment of access concentration (upacara-samadhi). As concentration is further developed, the meditator attains full absorption (appana-samadhi) beginning with the first jhana. Four stages of absorption can be attained by the practice of anapana sati, namely, the first, second, third and fourth jhanas. These stages of deep concentration are called "fixing" (thapana).

(v) Observing -- (viii) Retrospection

A person who has reached jhana should not stop there but should go on to develop insight meditation (vipassana). The stages of insight are called "observing" (sallakkhana). When insight reaches its climax, the meditator attains the supramundane paths, starting with the stage of stream entry. Because these paths turn away the fetters that bind one to the cycle of birth and death, they are called "turning away" (vivattana).

The paths are followed by their respective fruitions; this stage is called "purification" (parisuddhi) because one has been cleansed of defilements. Thereafter one realizes the final stage, reviewing knowledge, called retrospection (patipassana) because one looks back upon one's entire path of progress and one's attainments. This is a brief overview of the main stages along the path to Nibbana, base on the meditation of anapana sati. Now let us examine the course of practice in terms of the seven stages of purification.

The Seven Stages of Purification
~~~ ~~~~~ ~~~~~~ ~~ ~~~~~~~~~~~~~
~~~

The person who has taken up the practice begins by establishing himself in a fitting moral code. If he is a layman, he first establishes himself in the five precepts or the ten precepts. If he is a bhikkhu, he begins his meditation while scrupulously maintaining the moral code prescribed for him. The unbroken observance of his respective moral code constitutes purification of morality (sila-visuddhi).

Next, he applies himself to his topic of meditation, and as a result, the hindrances become subjugated and the mind becomes fixed in concentration. This is purification of mind (citta-visuddhi)--the mind in which the hindrances have been fully suppressed--and this includes both access concentration and the four jhanas.

When the meditator becomes well established in concentration, he next turns his attention to insight meditation. To develop insight on the basis of anapana sati, the meditator first considers that this process of in-and-out breathing is only form, a series of bodily events--not a self or ego. The mental factors that contemplate the breathing are in turn only mind, a series of mental events--not a self or ego. This discrimination of mind and matter (nama-rupa) is called purification of view (ditthi-visuddhi).

One who has reached this stage comprehends the process of in-and-out breathing by way of the conditions for the arising and cessation of the bodily and mental phenomena involved in the process of breathing. This knowledge, which becomes extended to all bodily and mental phenomena in terms of their dependent arising, is called the comprehension of conditions. As his understanding matures, all doubts conceived by him in respect of past, future and present times are dispelled. Thus this stage is called "purification by the transcending of doubt."

After having, understood the causal relations of mind and matter, the meditator proceeds further with insight meditation, and in time there arises the wisdom "seeing the rise and fall of things." When he breathes in and out, he sees the bodily and mental states pass in and out of existence moment after moment. As this wisdom becomes clearer,

the mind becomes illumined and happiness and tranquility arise, along with faith, vigour, mindfulness, wisdom and equanimity.

When these factors appear, he reflects on them, observing their three characteristics of impermanence, suffering and egolessness. The wisdom that distinguishes between the exhilarating results of the practice and the task of detached contemplation is called "purification by knowledge and vision of the true path and the false path." His mind, so purified, sees very clearly the rise and cessation of mind and matter.

He sees next, with each in-breath and out-breath, the breaking up of the concomitant mental and bodily phenomena, which appears just like the bursting of the bubbles seen in a pot of boiling rice, or like the breaking up of bubbles when rain falls on a pool of water, or like the cracking of sesamum or mustard seeds as they are put into a red-hot pan. This wisdom which sees the constant and instantaneous breaking up of mental and bodily phenomena is called "the knowledge of dissolution." Through this wisdom he acquires the ability to see how all factors of mind and body throughout the world arise and disappear.

Then there arises in him the wisdom that sees all of these phenomena as a fearsome spectacle. He sees that in none of the spheres of existence, not even in the heavenly planes, is there any genuine pleasure or happiness, and he comprehends misfortune and danger.

Then he conceives a revulsion towards all conditioned existence. He arouses an urge to free himself from the world, an all consuming desire for deliverance. Then, by considering the means of releasing himself, there arises in him a state of wisdom which quickly reflects on impermanence, suffering and egolessness, and leads to subtle and deep levels of insight.

Now there appears in him the comprehension that the aggregates of mind and body appearing in all the world systems are afflicted by suffering, and he realizes that the state of Nibbana, which transcends the world, is exceedingly peaceful and comforting. When he comprehends this situation, his mind attains the knowledge of equanimity about

formations. This is the climax of insight meditation, called "purification by knowledge and vision of progress."

As he becomes steadfast, his dexterity in meditation increases, and when his faculties are fully mature he enters upon the cognitive process of the path of stream-entry (sotapatti). With the path of stream-entry he realizes Nibbana and comprehends directly the Four Noble Truths. The path is followed by two or three moments of the fruit of stream-entry, by which he enjoys the fruits of his attainment. Thereafter there arises reviewing knowledge by which he reflects on his progress and attainment.

If one continues with the meditation with earnest aspiration, one will develop anew the stages of insight knowledge and realize the three higher paths and fruits: those of the once-returner, non-returner, and arahant. These attainments, together with stream-entry, form the seventh stage of purity, purification by knowledge and vision. With each of these attainments one realizes in full the Four Noble Truths , which had eluded one throughout one's long sojourn in the cycle of rebirths. As a result, all the defilements contained within the mind are uprooted and destroyed, and one's mind becomes fully pure and cleansed. One then realizes the state of Nibbana, wherein one is liberated from all the suffering of birth, ageing and death, sorrow, lamentation, pain, grief and despair.

Conclusion

~~~~~~~~~~

Births like ours are rare in samsara. We have been fortunate to encounter the Buddha's message, to enjoy the association of good friends, to have the opportunity to listen to the Dhamma. As we have been endowed with all these blessings, if our aspirations are ripe, we can in this very life reach the final goal of Nibbana through its graduated stages of stream entry, once-returner, non-returner and arahatship. Therefore, let us make our life fruitful by developing regularly the meditation of anapana sati. Having received proper instructions on how to practise this method of meditation, one should
~~~~~~~~~~

purify one's moral virtue by observing the precepts and should surrender one's life to the Triple Gem.

One should choose a convenient time for meditation and practise with utmost regularity, reserving the same period each day for one's practice. One may begin by briefly reflecting on the abundant virtues of the Buddha, extending loving-kindness towards all beings, pondering the repulsiveness of the body, and considering the inevitability of death. Then, arousing the confidence that one is walking the very road to Nibbana walked by all the enlightened ones of the past, one should proceed forth on the path of meditation and strive with diligent effort.

The Sermon on the Not-Self Characteristic (Anattalakkhana Sutta, Samyutta Nikaya XXII,
have heard that on one occasion the Blessed One was staying at Varanasi in the Game Re
There he addressed the group of five monks: 'The body, monks, is not self. If the body w
self, this body would not lend itself to dis-ease. It would be possible (to say) with regard t
body, "Let my body be thus. Let my body not be thus." But precisely because the body is
body lends itself to dis-ease. And it is not possible (to say) with regard to the body, "Let m
thus. Let my body not be thus." 'Feeling is not self.... Perception is not self.... Mental proce
are not self.... 'Consciousness is not self. If consciousness were the self, this conscious
would not lend itself to dis-ease. It would be possible (to say) with regard to consciousness
consciousness be thus. Let my consciousness not be thus." But precisely because cons
self, consciousness lends itself to dis-ease. And it is not possible (to say) with regard to
consciousness, "Let my consciousness be thus. Let my consciousness not be thus." 'Ho
thus, monks--Is the body constant or inconstant?' 'Inconstant, Lord.' 'And is that which is i
easeful or stressful?' 'Stressful, Lord.' 'And is it fitting to regard what is inconstant, stress
subject to change as: "This is mine. This is my self. This is what I am"?' 'No, Lord.' '...Is

what the Blessed Onesaid. Glad at heart, the group of five monks delighted at his words.
explanation was being given, the hearts of the group of five monks, through no clinging (no
sustained), were released from the mental effluents.

APPENDICES I. Controversial points: Dawn.

~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~ The Canon lacks a clear-cut definition of precise place. This lack is especially felt in connection with NP 2, but it also affects a number of ot as well. The Khuddasikkha, a Vinaya manual composed in the medieval period by Ven. Dl that the sky lightens in four stages before sunrise: a slight reddening two hours before the on the horizon; a slight whitening half an hour later; a second reddening 48 minutes before a second whitening 24 minutes after that. Burmese, Sri Lankan and some Thai bhikkhus t analysis, and differ among themselves only as to which of the four stages constitutes daw favoring the first reddening. Other Thai bhikkhus ignore the Khuddasikkha entirely and say occurs in the half hour before the point when, by natural light, one can see the lines in one' holding it out at arm's length. Pacittiyas 37 & 38, taken together, require that a bhikkhu accept alms before dawn. If he did go for alms before dawn, he would not be able to eat a he accepted at that time, since Pacittiya 37 forbids him from eating before dawn, and Pa forbids him from eating after dawn any food received before dawn of that day. If the first r whitening on the eastern horizon did count as dawn, then bhikkhus would be able to go is still dark, since the dark of night does not lift until the second reddening and whitening. in the Latukikopama Sutta (M. 66), however, states specifically that once the rules were one of their benefits was that they prevented bhikkhus from going for alms in the dark. Th that in the time of the Canon, the first reddening and whitening did not count as dawn. Th as follows: "(Ven. Udayin -- the good Udayin, not the lax Udayin of the first five sanghadisesas -- is addressing the Buddha:) 'It used to be, venerable sir, that we ate i evening, in the morning, and in the afternoon. Then there was the time when the B addressed the bhikkhus, saying, "Come now, bhikkhus, give up this afternoon meal." B that, I felt sorry and upset: "The fine staple and non-staple food that householders give afternoon -- the Blessed One has us give them up! The Sugata has us abandon th considering our love and respect for the Blessed One, our sense of shame and conscie up that afternoon meal, and ate (only) in the evening and in the morning. '"The there was the time when the Blessed One addressed the bhikkhus, saying, "Come now this evening meal." Because of that, I felt sorry and upset: "The more highly regar our two meals -- the Blessed One has us give it up! The Sugata has us abandon it!" It happened, venerable sir, that a man has gotten ingredients for curry during the day and wife, "Come, let's put this aside, and we'll all have it together in the evening." Almo cooking is done at night, sir, and very little during the day. But on considering our love a respect for the Blessed One, our sense of shame and conscience, we gave up that eve '"It used to be that bhikkhus going for alms in the dark gloom of night would walk in hole, fall into a cesspool, stumble into a thorny hedge, stumble into a sleeping cow, encounter teenage gangs on the way to or from a theft, and be propositioned by women happened when I was going for alms in the dark gloom of night that a certain woma
~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~

bowl saw me by a lightning flash. As soon as she saw me, she shrieked out in terror, "I
doomed! A demon is after me!" '"When she said that, I said to her, "I'm not a demo
sister. I'm a bhikkhu waiting for alms." '""Well then you're a bhikkhu whose mom is
pop is dead. It would be better for you, bhikkhu, that your belly be cut open with a
butcher's knife, than that you go prowling around for alms for your belly's sake like this i
the dark gloom of night!" '"When I remember this, sir, the thought occurs to me:
are so many painful things the Blessed One has rid us of, and so many pleasant ones h
so many unskillful things he has rid us of, and so many skillful ones he has provide
This shows clearly that once the rules were in effect, bhikkhus were saved from the dan
for alms in the dark; and suggests that dawn can be no earlier than the second reddening
mentioned in the Khuddasikkha. * * * II.
Controversial points: Sugata measures. ~~~

even a small bowl wouldn't fit. Although there is no way of determining the Sugata m
with 100% accuracy, the above considerations suggest that the following estimates are r
The Sugata cubit = 50 cm. The Sugata span = 25 cm. The Sugata fingerbreadth = 2.
Applied to the various rules, this would give us a hut 3 x 1.75 meters -- small, but adequate
rains-bathing cloth 1.5 x .625 meters -- enough to cover one from the waist to the knees; a
skin-eruption covering cloth 1 x .5 meters -- enough to cover one from the waist to just abo
All of these figures seem appropriate, and so have been accepted for the purposes of this

* * * III.Controversial points: Meals.

~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~ The Cullavagga (VI.21.1) contains a passage i
bhikkhus to accept seven kinds of specially arranged meals, in addition to the meals they r
almsround. The passage runs as follows: "Now at that time Rajagaha was short of fo
were not able to provide a meal for the Community, but they wanted to provide a de
meal, an invitational meal, a meal by lots, a meal on a day of the waxing or waning of th
moon, on Observance (//uposatha//) days, and on the day after each Observance day.
matter to the Blessed One. He said, 'I allow, bhikkhus, a Community meal, a desig
an invitational meal, a meal by lots, a meal on a day of the waxing or waning of the moo
Observance (uposatha) day, and on the day after an Observance day.'" Unfortuna
Canon does not give any detailed explanation of these terms. The Commentary explains
meals for the entire Community, and the other terms as follows: "(Having said,) 'Give
bhikkhus designated from the Community,' they wanted to provide a meal for the bhikkh
got through that designation. Later, having decided on bhikkhus in the same way (i.e., 1
bhikkhus), and having invited them, they wanted to provide a meal for them. Later,
wanted to provide a meal having decided on a lottery. Later, having fixed a date -- the w
waning moons, the Observance day or the day after -- they wanted to provide a me
2...10 bhikkhus. This is the extent of the meals that fall under the terms "designated me
invitational meals (the Sub-commentary adds an 'etc.' here.)" These definitions se
fairly clear: a //designated meal// is one in which the donors do not specify which bhikkhus
receive it, but simply ask for //x// number of bhikkhus from the Community, leaving it up t
bhattuddesaka (the "meal designator" -- the Community official responsible for managing t
meals) to designate who the recipients will be. An //invitational meal// is one in which the
decide on the recipients themselves. A //lot meal// is one in which the recipients are chose
lots, while the remaining meals -- //periodic meals// -- are given regularly to a rotating ros
number of bhikkhus every time the specified date comes around. However, the Comm
discussion of how the bhattuddesaka should manage these meals blurs the lines between
categories. It gives no detailed discussion of Community meals, but divides designated m
following two types: 1a) Meals for which the number of bhikkhus to be designated is
the total number of bhikkhus in the Community. 1b) Meals for which the number of bhikkh
designated is less than the total number of bhikkhus in the Community. Invitationa
~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~

come in the four types: 2a) Meals to which the entire Community is invited. 2b) Me which specific individuals or types of bhikkhus (e.g., no one but senior bhikkhus) are inv 2c) Meals to which one bhikkhu is invited and asked to bring //x// number of his friends. Meals for which the donor simply asks for //x// number of bhikkhus, without specifying in they should be. This typology raises two questions. For one, why aren't #1a and #2a under Community meals? Is it because the donor uses the words "designated" and "invite his/her plans for the meal? If so, how does one arrange for a Community meal that wou these two types, in line with the fact that a Community meal is said to be a separate categ The second question is how type #2d differs from a designated meal. Is it, again, because not use the word "designated" in announcing the meal? If so, the difference is only form Commentary itself states that the bhattuddesaka is to treat such a meal as he would a des which shows that in essence it is the same thing. As we reasoned in the discussion o 32, that rule applies only to invitational meals. If we follow the Commentary's original de of the various categories of special meal -- and eliminate types 1a, 2a and 2d as redundan enough to determine in essence which types of meals fall into this category and which d follow the detailed typologies, though, the distinctions become more a matter of formality a technicalities: For example, if the donor asks the bhattuddesaka to "designate nine bhik Community," the meal would not violate Pacittiya 32, but if he simply asked for nine bhikkh he did not specify who they were to be -- the meal would be a group meal, and any bhikl would be committing an offense. Or again, if he asked that the entire Community be "desi to his meal, they would not incur a penalty in going, but if he simply asked the entire Con meal, they would. Since the Commentary is a compendium of the opinions of many g teachers, it may have been that the definitions of the categories of meals were agreed on generation of teachers, and the typologies by another. This would explain the discrepan the two. Or it may have been that the entire discussion -- definitions and typologies -- was of one generation, who did mean the categories to depend on questions of formalities. any rate, as with many areas where the Canon gives no definite guidance, this is an issue policy for each bhikkhu is to follow the standards of the Community to which he belongs.

* * *

IV. Pali formulae: Determination.

~~~
~~~

The Canon and commentaries make no mention of any formula to repeat while markin
in Thailand is to repeat: Imam bindu-kappam karomi, which means, "I make this pr
marked." The words for determination, taking the bowl as an example, are: Imam
adhitthami, which means, "I determine this bowl" or "I determine this as a bowl." T
determine other requisites, replace the word //pattam//, bowl, with the appropriate name, a
for the outer robe: sanghatim for the upper robe: uttarasangam for the lower rob
antaravasakam for the sitting cloth: nisidanam for the skin-eruption cloth: kandu-pa
for the rains-bathing cloth: vassikasatikam for the sleeping cloth: paccattharanam
the handkerchief: mukha-punchana-colam for other cloth requisites: parikkhara-colam
determine many cloths of the same sort at the same time, use the plural forms: Change //
//imani//; //etam// to //etani//; and the //-am// ending for the name of the article to //-ani//.
example, to determine many miscellaneous cloth requisites within reach of the hand, the f
Imani parikkhara-colani adhitthami. A bhikkhu may determine only one of each of the f
items for use at any one time: the bowl, the basic set of three robes, and the sitting clot
wishes to replace an old one with a new one, he must first withdraw the determination of t
before determining the new one. The formula for withdrawal, again taking the bowl as an
Imam pattam paccuddharami, which means, "I relinquish this bowl." To withdraw the
determination of other items, replace the word //pattam// with the appropriate name, as ab
an item has been stolen, burnt, destroyed, lost, given away, or taken away on trust, its det
automatically lapses, and there is no need to withdraw the determination before determini
to replace it. The Commentary explains //destroyed// as meaning that the bowl or any of t
develops a hole of a certain size: for a clay bowl, a hole large enough for a millet grain t
through; for an iron bowl, a hole large enough to let liquid pass through; for the robes, a co
at least the size of the fingernail of the small finger, located at least one handspan in fro
long edge of the robe, and four fingerbreadths from the short edge of the lower robe, or ei
fingerbreadths from the short edge of the upper and outer robes. Once the robe or bo
hole of this sort, it reverts to the status of an extra robe or bowl. If the owner still wishes to
use it, the hole must be mended and the article redetermined before ten days elapse. Oth
subject to the penalties imposed by NP 1 or 21. * * *

V. Pali formulae: Shared ownership. ~~~

-- less formal than the first -- is: Imam civaram itthannamassa vikappemi, which me
share ownership of this robe-cloth with so-and-so." Suppose, for example, that the person
Nando. If he is one's senior, change //itthannamassa// to //Ayasmato Nandassa//; if he i
junior, change it to //Nandassa Bhikkhuno//; if he is a novice, change it to //Nandassa Sam
he is very much one's senior, use the first formula, above. (Mv.I.74.1 shows that the trad
the Buddha's time was not to use a very senior or respected person's name when referring
To share a bowl in this way, change //civaram// to //pattam//. Other changes, as called fo
inferred from the previous formulae. To place a piece of robe-cloth under shared owne
two persons who are absent, say to a witness: Imam civaram vikappanatthaya tuyha
which means, "I give this robe-cloth to you to share." The witness should ask the original
names of two bhikkhus or novices who are his friends or acquaintances. In Pali, this is:
Ko te mitto va sandittho va. After the original owner tells the names, the witness says:
Aham tesam dammi, which means, "I give it to them." To rescind the shared ownersh
Vibhanga says that the witness in the last case should say, Tesam santakam paribhu
vissajjehi va yatha-paccayam va karohi, which means, "Use what is theirs, give it away o
like with it." As for cases in which the article is placed under shared ownership in th
presence of the second owner, the Vibhanga gives no formula for rescinding the arrangem
K/Commentary suggests that the second owner should say, Mayham santakam par
vissajjehi va yatha-paccayam va karohi, which means, "Use what is mine, give it away or
with it." The Pubbasikkha Vannana, though, suggests the following formula (for robe
within reach, rescinded by a bhikkhu who is senior to the original owner): Imam civar
santakam paribhunja va vissajjehi va yatha-paccayam va karohi, which means, "Use
of mine, give it away, etc." If the bhikkhu rescinding the shared ownership is junior to the
owner, the verb endings are more formal: Imam civaram mayham santakam paribhunj
vissajjetha va yatha-paccayam va karotha. For a bowl, change //civaram// to //pattam//.
one piece of cloth is involved, the formula begins, //Imani civarani mayham santakani..../
than one bowl, //Ime patte mayham santake....// Changes for articles outside the reach of
may be inferred from those for the earlier formulae. * * *

VI. Pali formulae: Forfeiture. ~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~ As noted in the
the chapter on Nissaggiya Pacittiya rules, articles received in defiance of NP 18, 19, & 22 r
forfeited to a Community. The words of forfeiture in these cases are: NP 18. For receiv
silver (money): Aham bhante rupiyam patiggahesim. Idam me nissaggiyam. Imah
nissajjami. This means, "Venerable sirs, I have received money. This of mine is to be f
I forfeit it to the Community." NP 19. For engaging in monetary exchange: Aham b
nanappakarakam rupiya-sanvoharam samapajjim. Idam me nissaggiyam. Imaham
nissajjami. This means, "Venerable sirs, I have engaged in various types of monetary e
This of mine is to be forfeited. I forfeit it to the Community." NP 22. For asking for a n
bowl when one's original bowl is still usable: Ayam me bhante patto unapanca-bandh

pattena cetapito nissaggiyo. Imaham sanghassa nissajjami. This means, "This bo
venerable sirs, asked for when the (previous) bowl had less than five mends, is to be forfe
forfeit it to the Community." Articles used or received in violation of the remaining N
rules may be forfeited to the Community, to a group, or to an individual. Here only the fo
forfeiting to an individual will be given. Formulae for rules rarely broken -- e.g., involving
bhikkhunis or felted rugs -- are not listed. NP 1. For an extra robe (or robe-cloth) kept b
days. Idam me bhante civaram dasahatikkantam nissaggiyam. Imaham ayasmato
This means, "This robe (robe-cloth) of mine, venerable sir, kept beyond ten days, is to be
forfeit it to you." If the speaker is senior to the listener, change //bhante// to //avuso//. If
pieces of cloth are to be forfeited at once, the forms should be changed to plural: Ima
bhante civarani dasahatikkantani nissaggiyani. Imanaham ayasmato nissajjami. Fo
the reach of the hand, change //idam// to //etam; //imaham// to //etaham//; //imani// to //etar
//imanaham// to //etanaham//. For example, for one robe, one would say: Etam me b
dasahatikkantam nissaggiyam. Etaham ayasmato nissajjami. For more than one ro
reach of the hand, one would say: Etani me bhante civarani dasahatikkantani
nissaggiyani. Etanaham ayasmato nissajjami. Once the offense has been confessed, t
(robe-cloth) is to be returned to the original owner, using this formula: Imam civaram
dammi, which means "I give this robe (robe-cloth) to you." For more than one piece:
Imani civarani ayasmato dammi. Changes in the formula for robe-cloth beyond the reac
may be inferred from the preceding example. These two formulae for returning cloth are u
involving cloth and will not be repeated below. NP 2. For a robe separated from one f
or more: Idam me bhante civaram ratti-vippavuttham annatra bhikkhu-sammatiya
Imaham ayasmato nissajjami, which means, "This robe of mine, separated (from me)
without authorization of the bhikkhus, is to be forfeited. I forfeit it to you." Change //civara
//dvi-civaram// for two robes, and to //ti-civaram// for three. Other changes, as necessar
inferred from the formulae for rule #1, above. The formulae for returning the robe(s) are a
there. NP 3. For out-of-season robe-cloth kept more than a month: Idam me bhar
akala-civaram masatikkantam nissaggiyam. Imaham ayasmato nissajjami, which me
out-of-season robe-cloth of mine, venerable sir, kept beyond a month, is to be forfeited. I
you." For more than one piece of cloth: Imani me bhante akala-civarani masatikkant
nissaggiyani. Imanaham ayasmato nissajjami. Other changes, as necessary, may be in
formulae for rule #1. NP 6. For a robe (robe-cloth) requested from an unrelated
householder: Idam me bhante civaram annatakam gahapattikam annatra samaya
nissaggiyam. Imaham ayasmato nissajjami, which means, "This robe (cloth) of mine
sir, requested from an unrelated householder at other than the proper occasion, is to be
forfeit it to you." For more than one robe: Imani me bhante civarani annatakam
gahapattikam annatra samaya vinnapitani nissaggiyani. Imanaham ayasmato nissaj
7. For a robe (robe-cloth) requested from an unrelated householder during an allowable o

beyond the allowable limit: Idam me bhante civaram annatakam gahapattikam ta
vinnapitam nissaggiyam. Imaham ayasmato nissajjami, which means, "This robe (clo
requested beyond that (allowable) from an unrelated householder, is to be forfeited. I fo
you." For more than one robe: Imani me bhante civarani annatakam gahapattika
taduttarim vinnapitani nissaggiyani. Imanaham ayasmato nissajjami. NP 8. For a ro
(robe-cloth) received after making a stipulation to an unrelated householder: Idam m
civaram pubbe appavarito annatakam gahapattikam upasankamitva civare vikappam
nissaggiyam. Imaham ayasmato nissajjami, which means, "Without prior invitation, I
an unrelated householder and made stipulations about a robe (cloth). This robe (cloth) o
venerable sir, is to be forfeited. I forfeit it to you." NP 9. For a robe (robe-cloth) receiv
after making stipulations to two or more unrelated householders, use the same formula as
preceding rule, changing //annatakam gahapattikam to annatake gahapattike//. NP 10.
(robe-cloth) received after reminding one's steward too many times: Idam me bhante
atireka-tikkhattum codanaya atireka-chakkhattum thanena abhinipphaditam nissaggi
ayasmato nissajjami, which means, "This robe (cloth) of mine, venerable sir, produced
than three reminders, after more than six standings, is to be forfeited. I forfeit it to you."
NP 18 & 19. The formulae for these rules are given at the beginning of this appendix.
For an article received in trade: Aham bhante nanappakarakam kaya-vikkayam sa
me nissaggiyam. Imaham ayasmato nissajjami, which means, "Venerable sir, I have
various types of trade. This of mine is to be forfeited. I forfeit it to you." To return the
article: Imam ayasmato dammi, which means, "I give this to you." NP 21. For a
extra bowl kept beyond ten days: Ayam me bhante patto dasahatikkanto nissaggiyo.
ayasmato nissajjami, which means, "This bowl of mine, venerable sir, kept beyond ten
forfeited. I forfeit it to you." To return the bowl: Imam pattam ayasmato dammi.
NP 22. The formula for this rule is given at the beginning of this appendix. NP 23. F
of the five tonics kept beyond seven days: Idam me bhante bhesajjam sattahatikkanta
nissaggiyam. Imaham ayasmato nissajjami, which means, "This medicine of mine, vene
beyond seven days, is to be forfeited. I forfeit it to you." To return the medicine:
Imam bhesajjam ayasmato dammi. NP 25. For a robe (robe-cloth) snatched back in an
Idam me bhante civaram bhikkhussa samam datva acchinnam nissaggiyam. Imaham a
nissajjami, which means, "This robe (cloth) of mine, venerable sir, snatched back after
gave it to a bhikkhu, is to be forfeited. I forfeit it to you." NP 28. For a robe (robe-clot
offered in urgency kept beyond the robe season: Idam me bhante acceka-civaram ci
samayam atikkamitam nissaggiyam. Imaham ayasmato nissajjami, which means, "
robe-cloth-offered-in-urgency of mine, venerable sir, kept beyond the robe season, is to be
forfeit it to you." NP 29. For a robe separated from one for more than six nights:
Idam me bhante civaram atireka-cha-rattam vippavuttham annatra bhikkhu-sammatiya
nissaggiyam. Imaham ayasmato nissajjami, which means, "This robe of mine, separated

than six nights without authorization of the bhikkhus, is to be forfeited. I forfeit it to you."
Change //civaram// to //dvi-civaram// for two robes, and to //ti-civaram// for three. NP 3
For gains intended for the Community that one has diverted to oneself: Idam me bha
sanghikam labham parinatam attano parinamitam nissaggiyam. Imaham ayasmato
which means, "This gift, intended for the Community and knowingly diverted for myself, is
I forfeit it to you." To return the article: Imam ayasmato dammi.

* * * VII. Pali formulae: Confession. ~~~

some cases to commit offenses unknowingly, the current formula has been adopted to cov
offenses. Since the formula is repeated by every bhikkhu before the recitation of th
Patimokkha, the procedure has become little more than a formality. The Vinaya Mukha th
a bhikkhu conscious of having committed a particular offense should mention it to the ot
their own language before making use of the Pali formula. If the bhikkhu making con
junior to the one acknowledging him, the exchange is as follows (taking thullaccaya offe
example): Confessant: Aham bhante sambahula nana-vatthukayo thullaccaya
apanno. Ta patidesemi. Acknowledger: Passasi avuso? C: Ama bhante, passami.
avuso sanvareyyasi. C: Sadhu sutthu bhante sanvarissami. (Three times.) This last
means, "Very well, venerable sir, I will be restrained." If the bhikkhu making confessio
senior to the other bhikkhu, the exchange is as follows: C: Aham avuso sambahula
nana-vatthukayo thullaccayayo apattiyo apanno. Ta patidesemi. A: Passatha bh
C: Ama avuso, passami. A: Ayatim bhante sanvareyyatha. C: Sadhu sutthu avuso
(Three times.) For other categories of offenses, change //thullaccayayo// to
//nissaggiyayo pacittiyayo//, //pacittiyayo//, //dukkatayo//, or //dubbhasitayo//,
as the case may be. In confessing dubbhasita offenses, drop the word //nana-vatthukayo/
only one rule in this class * * * VIII. A
pupil's duties as attendant to his mentor. ~~~

these things, one need only set them out, rather than hand them to the mentor. Once they out, one should proceed to sweep out the bathroom and its surrounding area while the m the tooth-cleaning sticks and water. Then, while the mentor is using the bathroom, one sh the next step.] Make a seat ready. If there is conjey, then having washed a bowl, p the conjey near the mentor. When he has drunk the conjey, then having given him water, the bowl, having lowered it [so as not to let the washing water wet one's robes], wash it p without scraping it (i.e., knocking it against the floor) and then put it away. When the ment gotten up, remove the seat. If the place is soiled, sweep it. If the mentor wishes to e the village for alms, give him his lower robe, receiving the lower robe [he is wearing] from h return. [This is one of the few passages showing that the practice of having spare robes w current when the Canon was being compiled.] Give him his belt; give him his upper and o arranged so that the upper robe forms a lining for the outer one [%]. Having rinsed out the to him while it is still wet [i.e., pour out as much of the rinsing water as possible, but don' it dry]. If the mentor desires an attendant, one should put on one's lower robe so as t the three circles all around (see Sekhiyas 1 & 2). Having put on the belt, having put the up robes together and having put them on, having fastened the ties, having washed and tak the mentor's attendant. Do not walk too far behind him, do not walk too close. (One to tw him is appropriate.) Receive the mentor's bowl and its contents. (If the mentor's bowl is hot to the touch, take his bowl and give him one's own bowl [which is presumably lighter o the touch] in return.) Do not interrupt the mentor when he is speaking. If he is borde an offense (e.g., Pacittiya 4 or Sanghadisesa 3), one should speak in an indirect way so a his senses. (These two duties apply everywhere, not only on almsround.) [The Sub-com that, unlike the pupil's other duties, these must also be observed even when one is ill.] Returning ahead of the mentor, one should make a seat ready. Set out water for washing scraper, and a towel for drying the feet. Having gone to meet him, receive his bowl and him his lower robe; receive the lower robe [that he has been wearing] in return. If the uppe robes are damp with perspiration, dry them for a short time in the sun's warmth, but do n there long in the sun. Fold up the robes [separately, says the Sub-commentary], keeping fingerbreadths apart so that neither robe becomes creased in the middle. [One should fol practice in folding and hanging one's own robes.] Place the belt in the fold of the robe. [F these statements it would appear the bhikkhus in those days wore only their lower robes w dwellings.] If there is almsfood, and the mentor wishes to eat, give him water and pl almsfood near him. Offer him drinking water. (If there is enough time before noon, one sh the mentor while he is eating, in order to offer him drinking water, and eat one's own me he is finished. If there is not enough time for this, one should simply set out the water and one's own meal.) When he has finished eating, then having given him water, receiv bowl, lower it, and wash it properly without scraping it. Then, having emptied out the wate a short time in the sun's warmth, but do not leave it there long. Put away the bowl a

robes. When putting away the bowl, take the bowl in one hand, feel under the bed or bene
hand, and place the bowl there, but do not place it on the bare ground (any place where
soiled). When putting away the robe, take the robe with one hand, stroke the other hand a
cord for the robes [to check for any rough spots or splinters on the cord or rod that will ri
cloth], place the robe over the cord or rod with the edges away from one and the fold towa

If from the west, close the western w from the north, close the northern windows. If from the south, close the southern window weather is cool, open the windows by day and close them at night. If the weather is hot, c day and open them at night. [Again, one should follow these same procedures in lookin own room.] If a courtyard is dirty, sweep it (%). If a porch...attendance hall...fire hall (sauna)...restroom is dirty, sweep it. If there is no drinking water, provide it. If there is no water, provide it. If there is no water in the pitcher for rinsing [in the restroom], pour it int the pitcher.

* * * As noted in Chapter 2, a pupil who is not ill is expected to perform these services for his mentor unless the mentor tells h already has another pupil acting as his attendant or the other pupil says that he will accep responsibility for them. On the other hand, if the pupil is ill, the mentor is expected to perfo services for the pupil until the latter recovers. This reflects the Buddha's statement that should regard the mentor as his father; and the mentor, the pupil as his son. If both bear t relationship in mind, they are sure to prosper in the practice of the Dhamma-Vinaya.

APPENDIX

~~~~~~~~

The Ariyavamsa Sutta

Introduction

There follows a translation which is based on the Pali text (PTS), Woodwards' translation in //Gradual Sayings II// and the Thai translation of the Anguttara Nikaya. In this retranslation, great help has been given by Ven. Nagasena Bhikkhu of Wat Benchamabopitr in Bangkok.

This sutta which we call the Discourse on the Noble Lineages has a very celebrated history. It will be immediately obvious that its content is an inspiration for the thudong bhikkhu, and for those who are neither thudong nor bhikkhu, it has as its message: that of contentment with a sufficiency of this world's goods while warning any who cultivate this attitude to guard against pride arising, ("I am pure, they are not...").

The Commentary states that under the first three of the Noble Lineages, all of the Vinaya Collection (of rules and regulations for the Sangha) may be expounded. Under the fourth heading, which concerns mental development by way of meditation and the subsequently arising desire to relinquish all states connected with the unskilful (//akusala//) factors, under this Lineage may be explained all the Discourses (//sutta//) and Buddhist psychology (//Abhidhamma//). That such expositions actually took place is attested by many references in the history of Ceylon. It seems that such was the fame of this Discourse, that thousands would flock from near and far to hear skilled bhikkhus expound it. As the reader will see, it is a short sutta but evidently during its preaching practically all topics in the vast range of the Pali Canon could be brought under the headings which it gives. Such preaching sometimes continued for many days and was a popular subject for exposition during the rains retreat. Some traces of this tradition are still to be found in Sri Lanka. (For this
~~~~~~~~

information, se Ven. W. Rahula's "History of Buddhism in Ceylon").

Long before the days of the Commentaries (c. 5th Century CE), there is another possible reference to this sutta. It occurs in the list of seven Dhamma passages recommended for study by bhikkhus and bhikkhunis (nuns), upasakas and upasikas (lay men and women), by the Emperor Asoka in his Bhabru Edict. There it is called the `Aliyavasani' which many scholars equate with the Ariyavamsa Sutta. That the great Emperor should have singled out this text for the study of those who follow the Buddha Way, is indeed fitting and it is as appropriate for their study now as it was over two thousand years ago.

In Thailand at the present time, it is one of a selection of Discourses and other chants which come up regularly each month for chanting in temples after the evening puja. Needless to say, it is highly esteemed by thudong bhikkhus, many of whom know it by heart.

In the translation following, passages in brackets are explanations drawn from the Commentary or from the Thai translation which somewhat enlarges upon the Pali text. It is hoped that this most ancient teaching upon the thudong life will be of some interest after the preceding account of the Noble Lineages in the present time.

THE DISCOURSE ON THE NOBLE LINEAGE

Thus have I heard: At one time the Lord was dwelling near Savatthi at the Jeta Wood in Anathapindika's Park. Then the Lord addressed the bhikkhus saying: O bhikkhus!

Yes, Lord, responded those bhikkhus.

Then the Lord said --

Here, O bhikkhus, are these Four Lineages of the Noble Ones (Fully Awakened Ones, Silent Buddhas and Disciples) -- foremost (among lineages such as nobles, priests, merchants, etc.), (practised from) days of old, traditional (to the family of Noble Ones), (handed down from) time immemorial, neither separated from them now nor were they separated in the past (as inseparable from the life of Noble Ones), neither stained now nor shall they be reckoned impure in the future, and never are they despised by wise recluses and brahmins.

1. Here, O bhikkhus, a bhikkhu is content with this or that robe and he speaks in praise of contentment with any kind of robe (as those made up from rags cast off, oddments of cloth, corpse-wrappings, etc.). He does not search for robes in an unbecoming way (by hints, indications, round-about talk, or any other intimations) and if he does not obtain them, he is not cast down. When he has got them, he is not attached to them, is not fascinated by them, nor has he any desire for them. Seeing the peril (in robes acquired by wrong means) and skilled in avoiding this, he just makes use of them. Yet he does not exalt himself because of his contentment with any kind of robes, (thinking, I wear rag-robes, etc.), nor does he look down upon others (thinking, these bhikkhus wear fine robes made up by house-holders, etc.)

O bhikkhus, whatever bhikkhu is skilled in this (matter of contentment and in explaining to others the advantages of contentment), who is not lazy (slipping thereby into luxurious living), who clearly comprehends and is mindful (of the fact that he wears the robes only to ward off cold, heat, the sting of fly and mosquito, the touch of wind and burning sun and creeping thins, and to conceal the body), then he is indeed well established in this foremost Noble Lineage as handed down from time immemorial.

2. Then again, O bhikkhus, a bhikkhu is content with this or that almsfood and he speaks in praise of contentment with any kind of almsfood (as that collected from door to door, not favouring the rich, nor discriminating against the poor man's food). He does not search for almsfood in an unbecoming way (by hints, by indicating his like, etc.) and if he does not obtain it, he is not cast down. When he has

got it, he is not attached to it, is not fascinated by it, nor has he any desire for it. Seeing the peril (in almsfood acquired by wrong means) and skilled in avoiding this, he just makes use of it. Yet he does not exalt himself because of his contentment with any kind of almsfood, (thinking, I eat only almsfood and only once a day, etc.), nor does he look down upon others (thinking these bhikkhus take meals by invitation and eat twice before noon, etc.).

O bhikkhus, whatever bhikkhu is skilled in this (matter of contentment and in explaining to others the advantages of contentment), who is not lazy (slipping thereby into luxurious living), who clearly comprehends and is mindful (of the fact that he eats almsfood not for amusement, intoxication, beauty or embellishment but just enough for the support and continuance of his body, for the ending of discomfort and for helping on the life of purity), then indeed he is well established in this foremost Noble Lineage as handed down from time immemorial.

3. Then again, O bhikkhus, a bhikkhu is content with this or that shelter and he speaks in praise of contentment with any kind of shelter (as living at a tree-root, in the forest, or in a cave, etc.). He does not search for shelters in an unbecoming way (by asking supporters to provide him with spacious quarters, furnished, etc.) and if he does not obtain it, he is not cast down. When he has got it, he is not attached to it, is not fascinated by it, nor has he any desire for it. Seeing the peril (in a shelter acquired by wrong means) and skilled in avoiding this, he just makes use of it. Yet he does not exalt himself because of his contentment with any kind of shelter (thinking, I sleep in any place available), nor does he look down upon others (thinking, these bhikkhus live in well-built, well-furnished quarters, in viharas, etc.).

O bhikkhus, whatever bhikkhu is skilled in this (matter of contentment and in explaining to others the advantages of contentment), who is not lazy, (slipping thereby into luxurious living), who clearly comprehends and is mindful (of the fact that the shelter is only to ward off cold, heat, the sting of fly and mosquito, the touch of wind and burning sun and creeping things, and for

protection against adverse climatic conditions and for abiding in seclusion) then he is indeed well established in this foremost Noble Lineage as handed down from time immemorial.

4. Then again, O bhikkhus, a bhikkhu has development (of wholesome mental states) as a source of happiness and he delights in it; he has abandoning (of evil mental states) as a source of happiness and he delights in it. By having the happiness from development and by the delight thereof; by having the happiness from abandoning and the delight thereof, he does not exalt himself (thinking, I enjoy the tranquillity of transic concentration, or of insight, etc.), nor does he look down upon others (thinking, these bhikkhus are not striving to develop the supermind or for the superwisdom -- (adhicitta, adhipanna, etc.).

O bhikkhus, whatever bhikkhu is skilled in this (matter concerning Restraint of the Senses, the Threefold Good Conduct in thought, word and action, the Four Foundations of Mindfulness, the Seven Factors of Enlightenment, leading to Deliverance by Wisdom; who is therefore also skilled in abandoning the Five Hindrances and who has finally rid himself of the Three Roots of Unskill -- Greed, Hatred, Delusion; and who can explain the Way whereby all this is accomplished for the benefit of others), who is not lazy (thereby giving up striving for attainment), who clearly comprehends and is mindful (that both development and abandoning are practised only for the one purpose of insight and Enlightenment -- never for gaining magic posers, etc.), then he is indeed well established in this foremost Noble Lineage as handed down from time immemorial.

These, O bhikkhus, are the Four Lineages of the Noble Ones, they are foremost, practised from days of old, traditional, handed down from time immemorial, neither separated from the life of Noble Ones now nor in the past, neither stained now nor shall they be reckoned impure in future, and are never despised by wise recluses and brahmins.

Moreover, bhikkhus, possessing these Four Lineages of the Noble Ones, a bhikkhu may dwell in the East, or in the West, in the North or

in the South, and in whatever place he dwells, accidie (boredom in matters spiritual) cannot overpower him, but he will overcome accidie. Why so? O bhikkhus, such a one is a steadfast sage who has overcome both accidie (with seclusion, quietness, etc., and with skilled mental states) and delight (in evil ones that arise while living in seclusion and practising meditation. That is, by the contentment plus humility taught in the first three Noble Lineages, the evil of accidie is overcome -- a truly contented mind is never bored; and by development, abandoning and humility taught in the fourth Noble Lineage, the bond of delighted attachment is broken).

Thus spoke the Lord. The Welfarer, the Teacher then said further:

Accidie does not overpower the sage.
(Because of its weakness) it cannot overpower him.
(Instead), the sage overcomes accidie,
It is he alone who overcomes it.
What hindrances can obstruct one for whom
All kamma is dispelled and given up?
Who could blame one as pure
As ornament of Jambu gold?
Even the gods of him speak praise!
Even by Brahmas is he praised!

* * *

APPENDIX

The earliest editions of Keeping the Breath in Mind contain a version of Step 3 in Method 2 that Ajaan Lee later shortened and revised to its present form. Some people, though, find the original version helpful, so here it is:

3. Observe the breath as it goes in and out, noticing whether it's comfortable or uncomfortable, broad or constricted, obstructed or free-flowing, fast or slow, short or long, warm or cool. If the breath doesn't feel comfortable, change it until it does. For instance, if breathing in long and out long is uncomfortable, try breathing in short and out short. As soon as you find that your breath feels comfortable, let this comfortable breath sensation spread to the different parts of your body. For example, each time you breathe in and out once, think of an important part of the body, as follows:

As you let the breath pass into the bronchial tubes, think of it as going all the way down the right side of your abdomen to the bladder.

As you take another in-and-out breath, think of the breath as going from the main arteries to the liver and heart on down through your left side to the stomach and intestines.

As you take another in-and-out breath, think of the breath as going from the base of the throat all the way down the internal (front) side of the spine.

As you take another in-and-out breath, think of letting the breath go from the base of the throat down the front of your chest through to the tip of the breastbone, to the navel, and out into the air.

As you take another in-and-out breath, inhale the breath into the palate down to the base of the throat, on through the middle of the chest to the large intestine, the rectum, and out into the air.

Once you've completed these five turns inside the body, let the breath flow along the outside of the body:

As you take an in-and-out breath, think of inhaling the breath at the base of the skull and letting it go all the way down the external (back) side of the spine.

Now, if you're male, think first of your right side, both with the legs and with the arms. As you take an in-and-out breath, think of the right buttock and of letting the breath run all the way down the right leg to the tips of your toes.

As you take another in-and-out breath, think of the left buttock and of letting the breath run all the way down the left leg to the tips of your toes.

As you take another in-and-out breath, think of the base of the skull and of letting the breath run down your right shoulder, along your right arm to the tips of your fingers.

As you take another in-and-out breath, inhale the breath into the base of the skull and let it run down your left shoulder, along your arm to the tips of your fingers.

As you take another in-and-out breath, inhale the breath into the area inside your skull, thinking of your ears -- eyes -- nose -- mouth. (Men should think of the right side first, with each part of the body: the right eye, right ear, right nostril, right arm, right leg, etc.; women: the left eye, left ear, left nostril, left arm, left leg, etc.)

Once you've finished, keep careful watch over your breath. Make the breath refined, light, and free-flowing. Keep the mind steady and still in this breath. Be thoroughly mindful and self-aware. Let the

various breath sensations join and permeate throughout the body. Let the mind be neutral, impassive, and well-composed.

* * * * * * * *

GLOSSARY

Arahant: A Worthy One or Pure One -- i.e., a person whose heart is freed from the effluents of defilement and is thus not destined for further rebirth. An epithet for the Buddha and the highest level of his Noble Disciples.

Ariya sacca: Noble Truth. The word Noble (ariya) here can also mean ideal or standard, and in this phrase carries the meaning of objective or universal truth. There are four: stress, its cause, its disbanding, and the path of practice leading to its disbanding.

Asava: Effluent -- mental defilements (sensuality, states of being, views, and unawareness) in their role as causes of the flood of rebirth.

Avijja: Unawareness, ignorance, obscured awareness, counterfeit knowledge.

Ayatana: Sense medium. The inner sense media are the eyes, ears, nose, tongue, body, and intellect. The outer sense media are their corresponding objects.

Buddha (buddho): The mind's innate quality of pure knowingness, as distinct from the themes with which it is preoccupied and its knowledge about those preoccupations.

Dhamma: Event; phenomenon; the way things are in and of themselves; their inherent qualities; the basic principles that underlie their

behavior. Also, principles of behavior that human beings ought to follow so as to fit in with the right natural order of things; qualities of mind they should develop so as to realize the inherent quality of the mind in and of itself. By extension, Dhamma refers also to any doctrine that teaches such matters. To view things -- mental or physical -- in terms of the Dhamma means to view them simply as events or phenomena, as they are directly perceived in and of themselves, seeing the regularity of the principles underlying their behavior. To view them in terms of the world means to view them with regard to their meaning, role, or emotional coloring -- i.e., in terms of how they fit into our view of life and the world.

Dhatu: Element; potential; property; the elementary properties that make up the inner sense of the body and mind: earth (solidity), water (liquidity), fire (heat), wind (energy or motion), space, and consciousness. The breath is regarded as an aspect of the wind property, and all feelings of energy in the body are classed as breath sensations. According to ancient Indian and Thai physiology, diseases come from an aggravation or imbalance in any of the first four of these properties. Well-being is defined as a state in which none of them is dominant: All are quiet, unaroused, balanced, and still.

Ekaggatarammana: Singleness of object or preoccupation.

Jhana: Meditative absorption in a single notion or sensation.

Khandha: The component parts of sensory perception; physical and mental phenomena as they are directly experienced: rupa (sensations, sense data), vedana (feelings of pleasure, pain, or indifference), sanna (labels, names, concepts, allusions), sankhara (mental fashionings, thought formations), vinnana (sensory consciousness).

Lokavidu: An expert with regard to the cosmos -- an epithet normally used for the Buddha.

Magga-citta: The state of mind that forms the path leading to the transcendent qualities culminating in Liberation. Phala-citta refers to the mental state that follows immediately on magga-citta and experiences its fruit.

Nibbana (nirvana): Liberation; the unbinding of the mind from greed, anger, and delusion, from physical sensations and mental acts. As this term is used to refer also to the extinguishing of fire, it carries connotations of stilling, cooling, and peace. (According to the physics taught at the time of the Buddha, the property of fire in a latent state exists to a greater or lesser extent in all objects. When activated, it seizes and gets stuck to its fuel. When extinguished, it is unbound.)

Nimitta: Mental sign, theme, or image.

Nivarana: Hindrance. The mental qualities that hinder the mind from becoming centered are five: sensual desire, ill will, torpor & lethargy, restlessness & anxiety, and uncertainty.

Pali: The name of the most ancient recension of the Buddhist canon now extant and -- by extension -- of the language in which it was composed.

Samadhi: Concentration; the act of keeping the mind centered or intent on a single preoccupation. The three levels of concentration -- momentary, threshold, and fixed penetration -- can be understood in terms of the first three steps in the section on jhana: Momentary concentration goes no further than step (a); threshold concentration combines steps (a) and (c); fixed penetration combines steps (a), (b), and (c) and goes on to include all higher levels of jhana.

Sangha: The community of the Buddha's followers. On the conventional level, this refers to the Buddhist monkhood. On the ideal (ariya) level, it refers to those of the Buddha's followers -- whether lay or ordained -- who have practiced to the point of gaining at least the first of the transcendent qualities culminating in Liberation.

Sankhara: Fashioning -- the forces and factors that fashion things, the process of fashioning, and the fashioned things that result. As the fourth khandha, this refers to the act of fashioning thoughts, urges, etc., within the mind. As a blanket term for all five khandhas, it refers to all things conditioned, compounded, or fashioned by nature. 'Sankharupekkha-nana' refers to a stage of liberating insight in which all sankharas are viewed with a sense of indifference.

Vipassana (-nana): Liberating insight -- clear, intuitive discernment into physical and mental phenomena as they arise and disappear, seeing them for what they are in terms of the four Noble Truths and the characteristics of inconstancy, stress, and 'not-selfness,'

SANG-NGAK-CHO-DZONG
AND THE EVOLUTION OF THE APPRENTICE PROGRAMME

by Ngakpa Chogyam Rinpoche

(Presentation for the March 1994 Conference of the Network for Western Buddhist Teachers with His Holiness the Dalai Lama in Dharamsala)

The evolution of Buddhism in the West, and what possible part I could play in that, has been my primary interest and concern for over ten years. I have in that time, together with my students, created an individual context of practice that may be of interest here. What we have established isn't perfect but it functions very happily, having evolved out of the hard work and kind-hearted commitment of a small number of enthusiastic people. For this reason I would like to introduce some aspects of our history, and the ideas that led to the establishment of Sang-ngak-cho-dzong in Britain and the US.

Sang-ngak-cho-dzong is the name we were given by His Holiness Dudjom Rinpoche, specifically for the work in establishing a Ngakphang Sangha in the West. The word Ngakphang, means 'mantra holding' and applies to those who take Tantric vows and live as non-celibate householders. Ngakphang practitioners are usually called Ngakpas (male) and Ngakmas (female). They have uncut hair, and maintain the Tantric samayas. They wear robes which are more or less like monk's or nun's robes, but the skirt or shamthab is usually white (Ngakphang Sangha members sometimes wear red shamtabs, especially outside the Nyingma School). They also wear a red, white and blue striped shawl called a Ngakphang Sen.

Sang-ngak-cho-dzong, which has recently become a Registered Charity, is a relatively small but enthusiastically committed group of Nyingma

practitioners who attempt to live by the principles of Kindness and Awareness. We are a Ngakphang Sangha, or White Tantric Community, and attempt the practice of being Vajra brothers and Vajra sisters, in terms of trying always to see each other with pure-vision. In practice, this means relating to what is intrinsically good in each other, rather than giving undue weight to each other's confusion and neuroses. This is a quality that we endeavour to apply in the outside world as well, with regard to feeling a genuine kindness and good heart towards everyone. We maintain a respect for each other as practitioners, based on the shared commitment to living the View of our tradition. We place a lot of emphasis on genuine kindness, and genuine friendliness; as well as sincere courtesy and real tolerance. We view tolerance as that which allows for the differences and opposed views of different traditions and approaches, without the need to take any kind of hostile stance. The 'tolerance' which has to make everything the same in order to be tolerant, we view as an immature form of tolerance. We try to take the approach in which it should be possible to be friendly with anyone. We maintain that to disagree with a person's view or approach to Buddhism (or anything else) doesn't have to preclude an otherwise warm and humane interaction.

We regard humour, enthusiasm, naturalness and spontaneity as crucial in our approach to being a functioning Sangha. We have attempted to create an atmosphere, within our Sangha, in which no one has to modify their personality or language in order to be accepted. New Apprentices are unconditionally welcomed and made to feel part of the Sangha. There is no 'inner circle' to break into by being seen to be 'special' in any way. There is a continually advocated proscription against engaging in the discussion of Buddhism as a method of 'making conversation'. Apprentices are encouraged only to discuss Buddhist topics when they actually have the need to know something, or when the subject arises naturally in terms of shared experience. The reason behind this is to eliminate the tendency to gravitate to stilted forms of cultic conversation; or, to using Buddhist technical vocabulary as a form of status enhancement. I encourage this atmosphere of 'ordinariness' by spending a lot of informal time with Apprentices. In such 'informal time' conversation can take many forms, with Buddhist teaching weaving in and out of many different topics -- in an atmosphere of good humour and frequent hilarity. We endeavour to create an atmosphere of interpersonal acceptance and mutual support, in which no

one ever offers anyone gratuitous advice or criticism for any reason. We try to remember that, at best, our negative subjectivity is subjective. We therefore try only to express our warm and positive subjectivity. Each person is considered to be responsible for their own motivation, and if problems arise between students I regard it as my responsibility to help them come to a kind and open-minded understanding of each other. We endeavour to be good examples of what it is to be a Buddhist of any School; but, at the very least, we simply try to be kind, open and friendly people.

Non-sectarianism has always been a central theme of Sang-ngak-cho-dzong, and we have continued to try to establish friendly contact with other Buddhist organizations. We have become a member of the 'Network of Buddhist Organizations'; which is currently being founded in Britain, and view this as a wonderful opportunity to overcome the suspicion that sometimes exists between the Buddhist organizations of different schools and traditions. We hope to see far greater exchange and co-operation between groups, and are committed to participating to the furtherance of this end. I feel that it is useful for students to remain as open to teachers of other Buddhist traditions as possible. I feel that a broad range of contact with other Buddhist traditions is essential for the purpose of students having a wide and detailed understanding of Buddhism.

We are probably quite unusual as a Buddhist organization, in that we are small by design. Although our organization may possibly grow larger, it is enshrined in our charitable constitution that we will never develop in a pyramidal manner. As soon as there are other Ngakphang Lamas working within Sang-ngak-cho-dzong, I will automatically cease to be the central figure. This is something I instigated at the outset in order that the future development of Sang-ngak-cho-dzong would remain as free as possible from spiritual imperialism, even if I were no longer alive. I have a deep sense of responsibility for the future in terms of the organization that is growing around me, and my strongest wish has been to prevent Sang-ngak-cho-dzong becoming an unwieldy monolithic empire with me or anyone else at its head. To this end, I have always involved my students in terms of how Sang-ngak-cho-dzong has evolved.

I have often been saddened the superstar Lama phenomena in which students

have almost no personal contact with their Teachers. I have been saddened by the appalling accounts of sexual abuse that have come to my attention from such quarters, and convinced that their must be some better way to proceed. I have been especially saddened to meet people whose financial or family circumstances have prevented any real sense of being involved with Lamas or their Sanghas. Because of this, I felt it important to attempt to establish an alternative model; at least for people who wanted to study and practise with me. The model was to be one in which people were able to have a high degree of access, especially in times of crisis. The model was to be one in which those who were interested in the Nyingma Ngakphang tradition could gain access to someone who had some degree of experience. On the basis of limited student numbers it is only possible for Sang-ngak-cho-dzong to grow laterally; that is to say, with a greater number of teachers, rather than one teacher with an unwieldy number of students.

Because of the problems that I saw inherent in the large student numbers, I decided from the outset to limit the total number of Students to between 50-60 people. I based this number on the average extended family gathering at a wedding. This was a somewhat arbitrary choice, but one that was established in terms of how many people it was actually possible to know individually. My decision was based on the great importance that I saw in being able to relate as personally as possible to each student. It has been a crucial consideration for me, especially in terms of the teaching and practice of Tantra, that the teacher-student ratio be kept small. With regard to my own understanding of Tantric view, meditation and action, it is not easily possible to give guidance to hundreds of students; many of whom may be unknown to the teacher. Perhaps for Enlightened masters this is possible, but for an inconsequential eccentric yogi like me, it can be quite hard work sometimes keeping abreast of the life circumstances of those with whom I currently relate as a teacher. I have 49 Students at the moment, and there is currently a waiting list for men, because I am concerned about the experience of women living in a male dominated society. For this reason I have committed myself to working with a larger proportion of women students, and to giving them greater support. This is one of the stated aims and objectives of our charitable constitution. I correspond with all my students on a fairly regular basis, and am also available by telephone and FAX almost where ever I travel. I am also able to see them all individually according to personal need. They are all able

to visit me, and to invite me to their homes in order that our personal connection is maintained and nurtured through informal domestic contact. I would not feel that I was being of any real help to these people if I knew any less about them than I do at the moment. I also make a practice of thinking about them all every day, and sometimes write to them purely because I wonder how they are getting on. On a more formal basis we have established regular private group retreats for my personal apprentices where I am able to teach and give short private interviews. These retreats are held several times a year.

These are all things that I would have valued myself as a student -- so these are the circumstances I decided to make available for others. Some of these things I experienced and appreciated very deeply with His Holiness Kyabje Khordong gTerchen Tulku Chhi'med Rig'dzin Rinpoche in particular, such as informal personal time and the possibility of receiving letters which maintained a sense of contact. My students and I have been involved in this effort together, and we have all been inspired with the idea of creating something different, something that could possibly serve as a model for other people wanting to organize themselves around any particular Lama. We have made a practice of looking at the functioning of the student-teacher relationship together over the years, and what we have arrived at seems to suit our respective needs as a group.

My needs are met in terms of being financially supported. This allows me to: lead retreats; give individual guidance and solitary retreat schedules; give individual tuition to such Apprentices as our Thangka painter and to others involved in art and craft work; give public teachings; write books; edit teachings and interviews that have been transcribed; answer Apprentice letters and telephone calls; be available to receive Apprentices at my home; and, to travel to their homes. I also send out periodic 'Apprentice Letters' which keep Apprentices informed about my travels, plans, and ideas; interwoven with aspects of teaching that spring naturally out of these topics. Their needs are met in terms of allowing me to function in the ways I have described. They are aware that they always have the possibility of making other needs known to me, and that I will respond to the limit of my ability. We are committed to each other.

Sang-ngak-cho-dzong came into being through the interest shown in a style of explaining the Tantric teachings that made them accessible to ordinary people. My primary feeling has always been, that of wishing to make something possible for people, that I believed was possible -- an association of practitioners who could work and play together in a spirit of real kindness and friendship. I believed from the beginning that it must be possible to undermine the tendencies that I saw as being so harmful; such as: gossip; 'Dharma' politics; the giving of gratuitous advice and gratuitous criticism; the formation of clique and inner circles; elitism; sectarianism; self-righteousness; the assumption of artificial 'Buddhist' personality; the cultivation of a style of piety designed for the enhancement of self-image; and, many types of dysfunctional interpersonal behaviour. We have created an ethos within Sang-ngak-cho-dzong where the adoption of an 'artificial Buddhist personality' is not only not required, but which is actually practically nonexistent. The adoption of an 'artificial Buddhist personality' is unnecessary, when all that group acceptance depends upon -- is being an Apprentice. The result of this is a wide range of personalities and styles of expression, united by an interest in the practice, teachings, lineage, and, a kind heart.

I was originally called upon to be of help to people in Cardiff Wales who were experiencing varying degrees of confusion in terms of their experience of Tibetan Buddhism. I had returned to live in Cardiff at the end of the 70's, having spent that decade in study, practice, and retreat within the Nyingma School under the guidance of His Holiness Chhi'med Rig'dzin Rinpoche; His Holiness Dudjom Rinpoche, and His Holiness Dilgo Khyentse Rinpoche. I had also studied with other Nyingma Lamas such as Lama Kunzang Dorje Rinpoche, Lama Konchog Rinpoche, Jetsunma Khandro Ten'dzin Drolkar, and Lama Yeshe Dorje. My main Transmission Lineage, the Aro gTer, however came directly from Jetsunma Khandro Yeshe Rema. As it is known, I am the sole surviving holder of this Lineage and so I have the considerable responsibility to keeping this tradition alive for the benefit of future generations.

When I returned to the West, it was with H.H. Dudjom Rinpoche's instruction to teach and establish the Nyingma Ngakphang tradition in the West. The beginnings of this teaching were quite organic, and came from

invitations from people who came to hear of me by word of mouth -- simply as 'a person who lived locally' who could explain things in ordinary language. As you will know, I was recognized as the incarnation of Aro Yeshe, by His Holiness Kyabje Dilgo Kyentse Rinpoche; and as the incarnation of Aro Yeshe's predecessor, 'a-Shul Pema Legden, by H.H. Kyabje Khordong gTerchen Tulku Chhi'med Rig'dzin Rinpoche, but this did not play any part in how my role as a Lama in the West originated.

The explanation of the Buddhist teaching in creative Western vernacular idiom has always been important to me, because I am not an intellectual in any sense of the term. I am also not endowed with excessive intelligence. I didn't find it easy to understand many of the books that I tried to read when I first became interested in Buddhism over twenty years ago; and although I have now learnt to read complex language, in abstruse cultural modes, I still find such books rather heavy going. Many of the available books are found to be highly inaccessible or totally alien to those people who study with me. I have always had immense sympathy and empathy with people who find Tibetan Buddhist literature impenetrable, and so my writings have been dedicated to providing material not only for my Apprentices, but for others who feel intellectually and culturally overwhelmed by what they try to read. I am also rather unsophisticated, so I have always felt for those who wanted to remain 'ordinary' at some level. I remember, with both amusement and affection, being described in a book review by Stephen Batchelor as: "the working man's Lama Govinda."

One of the main things I noticed in the West, was how people would enter into practice with great fervour, and then become completely overwhelmed by the nature of the commitments they had taken. Tantric commitments were often entered into quite inadvertently. Sometimes married couples would find themselves to have made vows to abstain from sexual contact with each other; and in the early days I was often being contacted to talk with those who felt guilty about wishing to relinquish commitments that they had never intended to take. Sometimes people would simply experience confusion. They would find it hard to understand why they were involved with in-depth studies of hell-realms when they'd originally come to learn about something that would help them in their lives; to be kinder, happier, more relaxed and peaceful. They were certainly interested in the development of wisdom and compassion. They were certainly interested in

meditation, but were often simply bewildered by the cultural philosophical infrastructure that dominated the presentation of the teachings. People often stayed in this state of frustration for years, out of devotion to the Lama -- and then disappeared 'for no apparent reason', without ever having expressed their inability to make sense of anything. It seemed to me that people often suffered from some sort of 'Dharma burn-out'; they would seem to make valiant attempts to enter a Tibetan Buddhist cultural world-view, and then become disheartened when time and time again that world-view would clash with the reality of their actual situation. The 'good students' tended to be those who remained with teachers, and the 'bad students' were those who left. The 'good students' were those who didn't question much about the cultural aspects of the teaching, and the 'bad students' tended to be those who couldn't adapt to accepting statements as a matter of faith.

I was saddened by what I saw of Buddhism in the West, but soon realized that many of these things seemed to happen by default -- no one was guilty of doing anything on purpose. The interpersonal behaviour of students seemed to incorporate the use of 'insider language', and the assessment of others according to specific criteria, such as: extent of Buddhist vocabulary; knowledge of Buddhist technical categories; Empowerments received; and trips to India, Nepal and latterly Tibet. I could continue at great length on this subject, but it is not my wish or interest to be critical. I mention these issues simply to give examples of things I encountered in the West, and among Western people in the East. It was the attitudes I encountered, and the default mechanisms I saw in operation, that fuelled me with the strong wish to make some other possibility available. It struck me as very sad to see people with energy and enthusiasm for these teachings that I held so dear, fall away through inability to integrate them with their ordinary Western family lives.

The first three people who came to see me in Cardiff in 1982 eventually asked me to be their teacher. They are still my Students, and one, Khandro Dechen Tsedrup, became my wife. Khandro Dechen Tsedrup is an equal partner in all respects, and the fact that I am still her teacher doesn't play any part whatsoever in our domestic arrangements or personal relationship. We make this quite obvious in the way in which we live our lives. This means that Apprentices are fully aware that we are not replicating any form of

hierarchic relationship which subverts her freedom and dignity as a woman. I do my share of house work as a worthwhile part of my life, because we regard everyday life as practice. I encourage her as much as possible in terms of her giving teaching input on 'Open Retreats', and it is my hope that at some point in the future we will travel and teach together as a couple.

Soon other people expressed interest in working with me; and the questions they asked all had the same purpose: "How can I make sense of this for myself?"; "How can I relate this to my daily life?"; and "How does the complex symbolism and ritual of Tantra relate to what I experience as the actual nature of the world in which I live?" Because of the nature of my own personality, orientation and experience (and because of the nature of my own process of understanding) I found myself being able to speak with people in terms of realities, that were common to our everyday experience of existence. These first students organized weekend retreats under my guidance, and gradually other people became interested. It was a slow and gradual process, and one in which we were able to work together. I made a priority of adapting according to what I perceived to be the real individual needs of each student.

It was not long before I decided that it was vital to look carefully at what was coming into being around me. At one point in the evolution of my relationship with these first students, I suggested that they look to older, more qualified teachers in the Nyingma tradition; but they were quite adamant that this was not what they wanted. These particular people were all quite vocal in their unwillingness to involve themselves with the recitation of lengthy Tibetan liturgies on a daily basis. They expressed to me that they recognized from past experience that there was no possibility of being able to maintain such practices, or even generate the enthusiasm to begin them. The students who gathered around me were very enthusiastic to be engaged in practices that they could maintain, and they were happy about the style in which I explained the teaching. They wanted to have a teacher who facilitated the adaption and essentialization of the practices to their life circumstances, and who encouraged them to question whatever they didn't understand. Because of this I decided to accept the challenge of continuing with them as their main teacher. This caused me a lot of problems in some areas of the Buddhist world, but I will not

address that here. Suffice it to say that I became for a period of time the target of hostility, resentment, and gossip from certain factions of Western people and certain Tibetan Lamas who felt that I was encroaching of their territory.

I naturally regard this challenge as the most tremendous responsibility. It is also a most joyful and rewarding responsibility; but one that absorbs my life completely. From that point onward it became crucial to me not to fall, by default, into the problematic socio-political systems that I had seen in some other places. I decided to examine as carefully as I could, the 'default problems' I had seen, and organize Sang-ngak-cho-dzong in such a way that these could be avoided. I am aware, when I say this, that it not possible to create anything without problems; and for this reason I regard the structure we have created together as being continually open to adaption. It has been wonderful to see the way in which my Apprentices have grown as people. They have been an inspiration to me and to each other, and continually encourage me in the belief that the essence of the Tibetan Buddhist teaching can really be of great value to ordinary working people with families in the West. We all hope that our practice, and the example we would hope to set, will be of some value to the world in general.

The most substantial factor in avoiding what I felt to be the 'default problems' that I saw elsewhere, was the 'Apprenticeship Programme'. 'The Apprenticeship Programme' is something that my students and I have devised together over the years of our association. It includes a systematic procedure for becoming an Apprentice that has the following features:

a. Informational booklet that explains all aspects of Apprenticeship.

b. Information about leaving Apprenticeship.

c. Details of the Ngakphang Tradition.

d. The mutual obligations of Apprenticeship (Entry into Apprenticeship requires that Apprentices have to refrain from smoking or using illegal drugs).

I call my personal students Apprentices, to distinguish them from the students of other teachers, and the people who attend public retreats on an irregular and informal basis. I lifted the word 'Apprentice' from the American Indian tradition, specifically from my friend Sun Bear, who first invited to come and teach in the US. I chose this word, because I wanted to establish a category of student who could be free to leave without the attendant problems that many people experience if they decide to leave a teacher. During my teaching over the last ten years, I have met many people who have experienced incredible distress in the process of leaving their teacher and their teacher's organization. People have given me tragic accounts of having lost their friends, because the had been 'excommunicated'. I saw this as being highly undesirable from my perspective, and decided that I would do what ever I could to avoid any manifestation of 'cultism' that I saw arising within Sang-ngak-cho-dzong.

So, today we find ourselves working toward the establishment of retreat land somewhere in North Wales. Up until now we have held our retreats the home of one of my Apprentices -- an old farm in North Wales where we regular convert a barn space into a shrine room. This would be sufficient for our purposes but for the fact that accommodation and frequency of usage is limited. I have avoided any move toward establishing a 'centre' up until now, because I have wanted people to invest in their own practice both in terms of retreat time and the acquisition of Buddhist symbolic supports for practice. This has resulted in everyone having a shrine at home, and owning their own vajras, bells, drums, and other supports of practice in the tradition we follow. It is wonderful to see the barn become transformed into a shrine room in an hour, with thangkas and rupas arriving from everyone's home. We have our own thangka painter who produces very beautiful thangkas for anyone who wishes to acquire one for their practice.

We produce a journal called 'Hidden Word', and a quarterly news-letter called 'Hidden Agenda'. The name Hidden Word is a loose translation of 'Sang-ngak', the first two words of our name Sang-ngak-cho-dzong. These publications are intended to provide information on the Nyingma Tantras, and on the Ngakphang Tradition. They also provide information on the Ngakphang Traditions of the other Schools of Tibetan Buddhism.

We provide Open retreats every year which can be attended by anyone. The Open Retreats have teaching input from my 7 disciples -- senior Apprentices who have been ordained into the Ngakphang Sangha. There are also various practice groups in Britain and the US which are attended by my Apprentices, and by the growing number of 'Friends of Sang-ngak-cho-dzong'. The 'Friends of Sang-ngak-cho-dzong' are people who are not my personal Apprentices or disciples, but people who like to attend the 'Open Teaching Retreats' and other Sang-ngak-cho-dzong events. Although we have evolved in relative isolation from other groups, it has always been our wish to interact with other Buddhist sanghas in the West. In the USA we have very cordial relationships with Lama Tharchin Rinpoche and Chagdud Tulku Rinpoche. I go to the West Coast of America twice a year to give 'Open Teaching Retreats' at Tharchin Rinpoche's Retreat Centre of Pema Osel Ling. Students of Tharchin Rinpoche and Chagdud Tulku Rinpoche often attend 'Open Teaching Retreats', and my Apprentices often attend retreats and empowerments given by these two Lamas. My Apprentices are encouraged to attend the Teachings of other Lamas from all Schools of Tibetan Buddhism and Bon -- and from Buddhist Teachers in general; whenever they have the enthusiasm opportunity, interest or inclination. My Apprentices are particularly encouraged to study with my Vajra Brothers, Tharchin Rinpoche and Sonam Sangpo Rinpoche; and with my Vajra Sister Jetsunma Khandro Ten'dzin Dolkar. Tharchin Rinpoche will be coming to Britain this Summer to give some Teachings, and our British sangha are looking forward very much to meeting him. Unfortunately we do not as yet have such good relationships with other Lamas and their Sanghas in Britain, but we hope that our affiliation to the 'Network of Buddhist Organizations' in Britain will facilitate a more open and accepting atmosphere for all the organizations who are part of it. We are very keen to promote a sense of openness, kindness, tolerance, and mutual respect within Buddhism; because if we fail to be able to befriend each other as Buddhists, what purpose is there is dedicating practice to the benefit of all sentient beings?

I would like to conclude by thanking Your Holiness, and every one here very much indeed for listening to my account. I would like to offer my warmest appreciation for having been invited here, and for this marvellous opportunity to participate in what ever way I am able. I look forward to a happy and creative future of friendly contact with you all.

Ngakpa Chogyam Ogyen Togden Rinpoche,
Spiritual Director of Sang-ngak-cho-dzong

Notes

1. This article will also be published in the Summer 1994 edition of "Hidden Agenda".

2. Sang-ngak-cho-dzong is spelt with an umlaut over the "o" in "Cho" this has been removed in this version as have various other accent marks.

3. For more information about Sang-ngak-cho-dzong, please contact: the Secretary, Sang-ngak-cho-dzong, 5 Court Close, Whitchurch, Cardiff, CF4 1JR, Wales, U.K. tel: 0222 620332.

4. Sang-ngak-cho-dzong is a Registered UK Charity, No. 1019886.

ÉÍÍÍ

Venerable Pannyavaro, founded BuddhaNet, a computer information network, in 1993. He first used computers for simple desktop publishing, and with the gift of a modem discovered the on-line community and BuddhaNet came into being. BuddhaNet was the first Buddhist BBS (bulletin board system) which later evolved into Australia's first Buddhist website. This electronic Buddhist Information Network on the Internet's World Wide Web is now one of the largest and most popular Buddhist website in the world with over 17,000 strikes per day. E-mail: buddhanet@pobox.com

The Meditative Art of Attention

Meditative attention is an art, or an acquired skill which brings clarity and an intelligence that sees the 'true nature of things'. Among the variety of techniques in Buddhist meditation, the art of attention is the common thread underpinning all schools of Buddhist meditation: Mahamudra in the Tibetan tradition, Zazen in Zen Buddhism and Vipassana meditation in Theravada. Its ubiquitousness is illustrated by this Zen story: A monk once asked his teacher, 'What is the fundamental teaching in Buddhism?' the Master replied 'Attention'. The student, dissatisfied with the answer said, 'I wasn't asking about attention, but was wanting to know the essential teaching in Buddhism'. The Master replied, 'Attention, Attention, Attention'. So, it can be appreciated that the essence of Buddhist practice is to be found in the word - attention!

But how to do it? What is the practice? Vague advice to an aspiring meditator, such as 'be mindful' or 'be attentive', while offered with good intention, is unlikely to be effective. It is like the rulers in Aldous Huxley's utopian novel Island who taught mynah birds to repeat 'attention' in the hope of training the island inhabitants to be attentive - it just didn't work. To recognize the fact that most of us tend to function in a rather inattentive, unfocused way, which results in a rather superficial experience of life, is to see the necessity for training the errant attention in a systematic way, under guidance. This trained attention has the effect of uncovering, or laying bare,

things as they really are. It is the 'primary' attention that sees through the 'content' mind to the underlying processes. In laying bare the reality of psychophysical phenomena, the salient characteristics are revealed without interfering with them. The art of this 'bare' attention is to simply register the predominant object in one's experience as it arises without preference or interference, as a witness. That is, just registering or noting the changing phenomenon without reaction - be it sensation, sound, thought or a mind-state. However, if there is a reaction during the observation, as is natural for the untrained mind, then that too must be noted. This way of seeing has the potential to uncover the true nature of the phenomenon observed and thus a non-reactive, unconditioned awareness is acquired that brings liberating 'inseeing' or insight knowledge.

An Orientation to the Six Sense Doors

Being attentive is not a practice that needs to be confined to a crossed-legged posture. Meditative attention is a dynamic practice of paying close attention to what you are doing in whatever posture or situation you happen to be in. The way to orientate yourself in this practice is to literally 'come to your senses'. That is, a strategy of being fully aware of all your activities through a conscious orientation to the five senses and the 'sixth sense' - the mind. The Six Sense Doors is the name for the five physical senses: eye, ear, nose, tongue and body and the sixth sense, which is a collective term for the five kinds of consciousness: eye-consciousness, ear-consciousness, etc. So, the practice is to be consciously attentive at the predominant door or sense base. For example, being on guard at the eye-door allows you to notice the effects of the contact between the eye and the visible objects and how you are relating to them. This orientation to any sense door brings awareness of what is happening during any sense impression and with it the ability to monitor the associated feelings and consciousness that arise.

The actual meaning of 'attention' indicates its practice: 'to attend upon', 'to be present with'. By being attentive 'presence of mind' is developed. While there are degrees of attention (down to lack of

attention), it can be said that there are two types: natural attention, which is 'automated attention' and the intentionally 'deployed' attention that is developed in 'meditative attention'.

Deployed attention is either passive, or in the sense of being applied, active. The passive mode is 'bare attention', that is just registering what is happening, in a receptive state of mind, without reaction. The active mode of attention is applied when any kind of movement or action is done, including active reflective thought on things observed.

Try this Exercise in Orientating to a Sense-Door

Check! Where is your attention at this present moment? What sense impression is predominant now? Is it the eye-door as you view the page, the ear-door attracted by sounds or the touch sensations of the body's contact on the chair you're sitting on. This moment is the time to establish the habit of being consciously present at a sense door and notice what is happening during a sense impression.

Choose a sense-door and be attentive to what is happening there. What feeling is present; what is the quality of that feeling; is it pleasant, unpleasant or neutral? What thoughts are associated with it? Take particular notice of the changes. It is useful to make a habit of checking yourself during your daily routine: what sense door am I at; what is happening there; what are the associated feelings that arise?

Dependent origination

This strategy of being present at a sense-door ties in with the practical application and study of Dependent Origination, Paticcasamuppada. As you experience the series of causal events, you can intercept them at the linkage of either consciousness, sense impression and/or feeling. The ability to do this gives you the potential to be free of the conditioned cycle of suffering that most people are unknowingly trapped in.

The Law of Dependent Origination is a profound subject, it is the very essence of the Buddha's Teachings, illustrated by a famous exchange between the Buddha and his personal attendant, Ananda. Ananda casually remarked that he thought it was an easy thing to understand. The Buddha responded by saying, 'Not so Ananda, don't ever say such a thing. It's because people do not understand origination, that they are not able to penetrate it, that their minds are befuddled. Just as a ball of twine becomes all tangled up and knotted, just so are beings ensnared and unable to free themselves from the wheel of existence, the conditions of suffering and states of hell and ruin'.

We can untangle the tangle by 'insighting' into dependent origination through awareness at a sense door. What we are experiencing now is the result of a series of events that arose because of previous conditions and is linked as a causal chain of effects, i.e. as cyclic existence.

It is useful to have a working knowledge of the eleven links in the cycle of Dependent Origination. Even such theoretical knowledge will point you in the right direction and the potential to be free of the conditioning it causes:

1. With Ignorance as a condition Karmic Formations or Volitional Actions arise;
2. With Volitional Actions as a condition Consciousness arises;
3. With Consciousness as a condition Mentality/Materiality arises;
4. With Mentality/Materiality as a condition the Six Sense Bases arise;
5. With The Six Sense Bases as a condition Contact (sense impressions) arise;
6. With Sense Impressions as a condition Feelings (vedana) arise;
7. With Feelings as a condition Grasping arises;
8. With Grasping as a condition Clinging arises;
9. With Clinging as a condition Attachment arises;
10. With Attachment as a condition Becoming arises;
11. With Becoming as a condition Pain, old age and death arise, i.e. conditioned suffering.

Here is the enlightenment story of Bahiya, the wooden robed one, who was able to practise in this way. Bahiya, originally a merchant, was

travelling at sea with all his merchandise and was shipwrecked and cast ashore naked. He found bark to cover himself and an old bowl, and he went searching for alms-food. The local people were impressed by his seeming austerities and his reputation as an ascetic grew. He was tested when people offered him fine robes, but knowing that they would loose faith in him if he accepted, he refused, keeping up the deception. Bahiya was installed in a temple and worshipped as an Arahant (an Enlightened One) so that in time he came to believe that he was actually an enlightened being.

He lived impeccably and gained good concentration powers. Sitting in meditation one day, it is said that a deva, who was a former blood-relation, was able to persuade Bahiya that he wasn't really enlightened at all and that he should go and see the Buddha, an Arahant who could help him.

Bahiya made a long journey to visit the Buddha at Savatti and reached the monastery just as the Buddha was about to go on the daily alms-round. Bahiya asked the Buddha three times to teach him the Dharma before the Buddha agreed to teach at such an inopportune time.

The Buddha then gave these brief instructions: 'Bahiya, you should train yourself in this way:
With the seen, there will be just the seen; with the heard, there will be just the heard; with the sensed (touched, tasted, smelt) there will be just the sensed; with the cognized, there will be just the cognized.

When for you, Bahiya, there is merely the seen, heard, sensed and cognized, then you will not be therein. Then you, Bahiya, will be neither here nor there nor within both - this is itself the end of suffering.'

Through this brief instruction, Bahiya was immediately Enlightened - through non-clinging - thus becoming an Arahant.

Not long after the Buddha had departed, Bahiya was fatally gored by a cow. When the Buddha returned from his alms-round and found Bahiya dead, he arranged for his cremation and for a stupa to be built for

him. When asked what the destiny of Bahiya was the Buddha said that because he had grasped the meditation subject in the teacher's presence, and practised as instructed according to the Dharma, Bahiya had attained Parinibbana, final Enlightenment.

The Technique of Mental Noting

A useful device to support meditative attention is naming or labelling the various objects during the observation of your own body and mind. Used judiciously, it is a very useful tool for focusing and sustaining the attention. The noting is done by repeatedly making a mental note of whatever arises in your body/mind experience. For example, 'hearing', 'hearing', 'thinking', 'thinking', 'touching', 'touching', etc. This is a powerful aid to help establish bare attention, especially at the beginning of the practice, when it is vital to systematically note or label as much as possible to establish the attention. Otherwise, you are likely to get lost in unnoticed wanderings with long periods of inattention. Having succeeded, even partially, in sustaining the attention, then the mental noting can be dropped, especially if the noting has become mechanical or is so clumsy that it is interfering with the subtle attention. Having acquired the ability to monitor your experience with just bare attention, you will need to return to the mental noting only when the attention weakens, is lost or needs to be re-established. The mental noting can be combined with the practice of orientating to your sense impressions by the naming of the physical and mental objects as they arise at the six sense doors. Be careful not to analyse what is being observed, just register or note it without reaction.

The Four Spheres of Attention

The four spheres of attention are structures or frames of reference used to support the practice. They are based on the Satipatthana Sutta and can be used as guidelines or frames of reference to help you direct the attention as you investigate the various experiences in your body and mind.

1. Attention to the Body
Directed to apprehending the primary elements of the body (earth, air, fire and water) i.e., hardness, softness, temperature, fluidity and movement within the body and/or awareness of the various body postures, movements and actions in daily activities.

2. Attention to Feelings or Sensations
Noting the qualities of feelings as either pleasant, unpleasant or neutral while being careful to differentiate the primary feeling from the emotional story.

3. Attention to the Consciousness and Mind-States
The consciousness is the 'knowing' of anything, eg. a physical sensation and the knowing of it. Particular attention is paid to the mind-states, eg. happiness, sadness, agitation and seeing their arising and passing away.

4. Attention to the Mental Content
This is not analysing mental events or classifying them, but using the attention to passively register the things of the mind - thoughts, ideas and concepts - as a witness without commentary.

The Two Modes of Meditation

There are two modes of meditation: Calm (Samatha) and Insight (Vipassana). Calming or serenity meditations use techniques of 'fixing' on a single object, excluding all other objects, to produce calm and one-pointedness. Examples are techniques using visualisation, following the respiration, mantras and contemplation. The second meditation mode is made up of practices that develop awareness. That is, paying close attention to the predominant object in your physical and mental experience with moment-to-moment awareness. This meditative attention will lead to insight knowledge.

The ability to successfully manage yourself in meditation depends on whether you can make appropriate adjustments or 'fine tuning' during a

practice session. This ability is based on understanding these two modes of meditation: for example, if you become strained or tense during insight meditation, switching to the serenity meditation mode will calm and relax the mind; or if you became stuck in a becalmed mind-state in serenity meditation, you can invigorate the mind with an awareness exercise to give it an investigative edge.

Three-fold Strategy of Practice

It is necessary to appreciate the nature of 'practice' as applied to meditation because it could mistakenly be taken to imply the notion of control. This is far from the case, as the meditator needs to have a flowing receptivity to the experience without in any way controlling it. So 'discipline' in the meditation context can be misunderstood as imposing one's will to control the practice. Actually, it is no more than following the directions and persistently applying the instructions with sensitivity. So correct practice is repeated performance to develop skills, without controlling or interfering with the experience. It's developmental - the way to growth!

It is important at the beginning of the practice to notice how you are relating to your experience or what your attitude to it is. If it happens to be reactive or judgmental then it is necessary to change the way you relate to things, situations or people, by cultivating qualities of acceptance, empathy and of 'letting go'. Being more accepting and allowing, without the struggle to gain something, creates a natural meditative state that facilitates the practice.

To successfully self-manage your practice it is necessary to take a holistic approach and to work within a supportive structure. Such a system is found in the 'Three-fold Strategy of Practice', which is a complete and integrated system supportive of the psychological wellbeing of the practitioner:

1. Restraint of behaviour in order to harmonise relationships;

2. Recollectedness, especially regarding developing the meditative art of 'focusing';

3. Discernment, which is the wisdom that sees the true nature of mind and existence.

Restraint and Harmony

Traditionally the meditator must formally undertake, or accept, five rules of conduct as a prerequisite for meditation. They are the foundations that good practice is based on, without them good concentration cannot be attained. These restraints need to be considered and accepted, as they act as protectors for your well-being on the meditation path: 1) to refrain from from harming or taking life; 2) to refrain from taking what is not given; 3) to refrain from the misuse of the senses; 4) to refrain from false and harsh speech; and 5) to refrain from the taking of intoxicants which confuse the mind. This is the ethical underpinning of the threefold system. But they are not to be considered as mere 'no-nos' as they are balanced by the cultivation of positive behaviour: honesty, generosity, kindness, etc.

Recollectedness

The quality of recollectedness or full awareness is acquired through the development and the managing of three meditation skills: Right Effort, Right Attention and Right Concentration. Effort is right in the sense of arousing, sustaining and balancing the effort; meditative attention is right when there is close and impartial attention to the various meditation objects as they arise; concentration is right when it centres upon and intensifies the meditative focus. Too much effort makes the mind restless; not enough makes the mind slack; too much concentration restricts the awareness, not enough and the mind loses its focus; but there can never be too much attentiveness, as the acuity of attention is the factor which will deepen the practice. The successful managing of these meditation skills will produce mindfulness or presence of mind, the prerequisite for a finely tuned discernment.

Discernment and Insight

Discernment is the intelligence that uncovers the true nature of things by seeing through the 'content' mind to the underlying processes. It is based upon a non-reactive awareness, a perfectly attuned attitude and a penetrative attentiveness that has the potential to see 'what really is'. The outcome of such practice is direct experiential knowledge of the three universal characteristics of existence: change, unsatisfactoriness and impersonal process which culminates in a series of insights freeing one's view from the distortions caused by ignorance.

Three-fold Strategy and Mental Impurities

Mental impurities are said to be present in three stratified layers in the mind: 1) dormant 2) manifest and 3) expressed. These impurities, or the three poisons of greed, hatred and ignorance, can be dealt with in three ways: first their expression can be restrained by harmonising one's behaviour; secondly, when they manifest in the mind, for example as angry thoughts, then they can be skilfully suppressed through concentration practices in serenity meditation; eventually when they are seen at their primary source or dormant level then they can be eradicated through insight meditation.

Here's an example of how the three-fold strategy is used to deal with our most troublesome negative emotion - anger. First, restrain your behaviour in a situation where anger arises, thus not giving it a chance to be expressed; as soon as anger surfaces in the mind as negative thoughts then a serenity meditation technique will calm the anger in the mind. But it is only through insight meditation where the ego-illusion is seen at its primary source, as the notion of 'me' and 'mine', that the anger at the dormant level can be seen with the possibility of eradicating it at its source.

The Three Meditation Practices

1. Sitting Meditation - where the primary focus is on the elements of

the body while switching to the other spheres of attention as they arise.

2. Walking Meditation - where the stepping or foot movements in walking are noted in detail and the attention is focused on the movements as the primary object.

3. Daily Activities - the meditator continually labels body movements and actions.

Linking these three aspects of practice together will create an unbroken thread of awareness throughout the day, either generally, or as the practice becomes fluent, a precise and detailed noting of every action and movement can be sustained.

Instruction for Sitting Meditation

The first step is to find a balanced sitting posture. You should be relaxed yet your spine should be straight - you may have noticed how a 5-year-old sits up in a balanced way without effort. Allow your head to balance freely on the spine, checking that it is not pulled back or fixed. Allow your chin to drop so that your eyes and ears are at about the same level.

If sitting on the floor, use cushion(s) so that your knees are below your hips and in contact with the floor (otherwise your spine will collapse) or else use a chair with a firm base (not a sofa). Slumping only increases the pressure on the legs and discomfort in the back. Try radiating loving-kindness above and below and in all directions around you to check that you are not holding or contracting in the front or the back, etc. Check that your breathing is free and easy -any restriction indicates a fixed posture. Turn your awareness to the parts of your body which contact the cushion, ground or chair, softening onto the supporting surfaces.

It is useful to spend 5 minutes scanning the body in this way. Note that there is no such thing as 'perfect posture' and postural aches

will come and go as a natural part of the unfolding practice. If pain becomes overwhelming or is due to injury, mindfully adjust the posture after noting the various sensations. However, as concentration develops, sensations of hotness, stiffness and itchiness will arise as part of the contemplation of feeling and sensation, and it is important to note them mindfully without fidgeting.

It is important to attend to your posture with wisdom, not insensitive will-power. Posture will improve with time, but you need to work with the body, not use force against it. If you have a lot of pain during a period of sitting, change posture, sit on a small stool or chair, or stand up for a while.

Checking your posture

* Are the hips leaning back? This will cause a slump.
* The small of the back should retain its natural, unforced curve so that the abdomen is forward and 'open'.
* Imagine that someone is gently pushing between the shoulder blades, but keep the muscles relaxed.
* Note, and gently release, any tension in the neck/shoulder region.

Once you have settled into a comfortable, upright, balanced position you can begin meditating. On the basis of working from the gross to the subtle, i.e. from the body to the mind, feel the touch sensations of hardness or softness from the body's contact with the ground or chair (earth element). This will help to anchor the attention to the body, especially when assisted by the mental label of 'touching'. Then tune into the natural rising and falling movement of the lower abdomen, making a mental note or label of 'rising', 'rising' concurrent with the upward movement and 'falling', 'falling' with the downward movement. Having established the movement of the abdomen as a base be wary of clinging to it. If any secondary objects arise, such as thinking, sensations or mind-states they too must be noted until they disappear. Then if nothing else takes your attention return to noting the rising and falling movement of the abdomen as your primary object, but always be prepared to attend to the secondary objects when they arise.

It is important to be alert to the specific characteristics of the various elements under observation, eg. the series of sensations from the movement of the abdomen (wind element) or the specific characteristics found in pain such as heat, throbbing, etc (fire element). The traditional sitting posture gives the right environmental conditions and allows you to focus intensely and apprehend, at a microscopic level, the body's elements and the subtle mind events.

Technique in Walking Meditation

While meditation is usually associated with the sitting posture, Insight meditation (Vipassana) exercises can be practised while walking. Walking in Insight meditation is essentially about the awareness of movement as you note the component parts of the steps. Alternating walking meditation with sitting meditation helps to keep the meditation practice in balance.

Walking meditation is also a skilful way to energise the practice if the calming effect of sitting is making you dull or you are becoming over concentrated. Actually, it can be the preferred mode in Insight meditation as it is meditation in action.

You will need to find a level surface from five to ten metres long on which you can walk back and forth. Your arms should hang naturally with your hands lightly clasped in front. Gaze at a point about two metres in front of you on the ground to avoid visual distractions. Establish your attentiveness by first noting the standing posture and the touch sensation of the feet at the start of the walking track. Then as you walk keep the attention on the sole of the foot, not on the leg or any other part of the body.

For the first five minutes you can note just three parts of each step: 'lifting', 'pushing', 'dropping'. Mentally note or label each step part by part, building up so that you are noting all six component parts: 'raising', 'lifting', 'pushing', 'dropping', 'touching' and 'pressing' - concurrent with the actual experience of the movements.

While walking and noting the parts of the steps you will probably find the mind still thinking. Not to worry, keep focused on the noting of the steps, so long as the thoughts remain just 'background thoughts'. However, it you find you have been walking 'lost in thought' you must stop and vigorously note the thinking as 'thinking', 'thinking', 'thinking'. Then re-establish your attention on the movement and carry on. Be careful that the mental noting does not become so mechanical that you lose the experience of the movement.

Try to do a minimum walking period of half an hour and build it up to a full hour. Strategically it is better to do a walking period before a sitting session as it brings balance into the practice. If you can alternate the walking and sitting sessions without any major breaks you will develop a continuity of awareness that naturally carries through into the awareness of daily activities.

Awareness of Daily Activities

Those who see worldly life as an obstacle to Dhamma see no Dhamma in everyday actions: They have not discovered that there are no everyday actions outside of Dhamma.
- Eihei Dogen.

For awareness to deepen, continuity, which gives momentum to the practice, must be maintained for at least a few hours in the day. Continuity arises through careful and precise attention to movements, actions, feelings and mind-states, whatever is prominent, for as long as possible during the routine of the day.

Nothing can be dismissed as unimportant when noting daily activities: domestic chores, eating, cleaning your teeth. Repeatedly note any and every movement and activity in order to establish the habit so that it becomes second nature to note them in your daily routine. Of course, this is not easy to establish and so requires patience and perseverance - especially in being kind to yourself when you feel frustrated by constant forgetfulness!

If you are having difficulty, set yourself up to do a daily mindfulness exercise using a 'trigger' as a reminder. For instance, you could use contact with water as a trigger to remind you to be present with whatever you are doing while you are doing it, for instance washing your hands, doing the dishes, hosing the garden, washing the dog, etc. If you succeed only once in paying full attention it might be the start of establishing the habit of being mindful.

It is helpful to reinforce your efforts in being attentive in daily life by reviewing or taking stock of your daily notings - but without making judgements - and recording your practice in a meditation diary.

Awareness of Feelings

The Buddha said, 'all things converge in feelings'. Awareness of feelings is the pivotal factor in meditation. A lot of difficulties in meditation practice stem from the unnoticed or unacknowledged reaction to unpleasant feelings. We spend most of our lives in unceasing effort to increase pleasant feelings and to avoid unpleasant feelings. If we do not acknowledge feelings they linger and we become stuck in some state - positive or negative. Yet feeling by itself, in its primary state, is quite neutral when it simply registers the impact of an object as pleasant, unpleasant or indifferent. Only when there are emotional additions, such as when one's personal story is involved, will there arise fear, hatred and anxiety. Feelings and emotions are separable. Many of the weaker impressions we receive during the day stop at the mere registering of faint and brief feelings. This shows that the stopping at the bare or primary feeling is psychologically possible.

Attention to feelings, even when they are faint and brief, can be sustained throughout the day when the mind is calm and alert, because actually there are many occasions when one is not totally preoccupied and is able to notice feelings clearly at their primary stage. If, however, you are unable at first to differentiate the feelings, as a strategy try asking yourself a checking question: 'what feeling is present?'. In this way, you can sort out the jumble of confused

feelings usually present.

It is of particular importance to dissociate the feelings from even the slightest thought of 'I' or 'mine'. There should be no ego-reference such as 'I feel' nor should there be any thought of being the owner of the feeling: 'I have pleasant feelings or I have pain' but rather 'There are pleasant feelings' or 'There is pain'[MS1]. Awareness of feeling without the ego-reference allows the meditator to keep the attention focused on the feeling alone. This is the meaning in the Satipatthana Sutta of 'He contemplates feeling in feeling'.

You should first develop an awareness of the feelings when they arise, clearly distinguishing them as pleasant, unpleasant or neutral. With attentiveness there is no such thing as mixed feelings. Attention should be maintained throughout the short duration of the specific feeling until the feeling ends. If the vanishing point of feeling is repeatedly seen with increasing clarity it will become much easier to catch and finally to stop thoughts and emotions which normally follow so regularly and are habitually linked: if the feeling is unpleasant a negative reaction occurs; if it's pleasant grasping arises. Thus the mind is mostly just reacting: liking, disliking. The result is that you are being caught in the conditioned cycle of suffering at the linkage of feelings and grasping. But there is no need to be. By intercepting the primary feeling at a sense-door, without the following emotion, the feeling will go no further, therefore no attachments, no liking or disliking, end of story, end of suffering.

When 'bare' attention, that is, registering the feeling without reaction in a state of receptivity, is directed to the rising and vanishing of feelings, the polluting additions are held at bay and inhibited from further elaboration. So gradually the gross feelings weaken and fall away - one loses interest - thus dispassion arises, which is a natural, effortless 'letting go'.

The Buddha likens feelings to bubbles. If feelings can be seen in their bubble-like, blown-up and bursting nature their linkage with grasping and attachment will be weakened more and more until the chain is finally broken. Through this practice, attachment, which is a kind of

stuckness to feelings, will be skilfully eliminated. This does not mean that this practice will lead to cold aloofness or an emotional withdrawal. On the contrary, mind and heart will become more open and free from the fever of clinging. Out of this seeing, an inner space will be provided for the growth of the finer emotions: loving-kindness, compassion, patience and forbearance.

Achieving Balance in Meditation

An image often used to describe the practice of meditative attention is that of walking a tightrope. To succeed in this art you must pay attention to your balance. In meditation, this applies especially to how you relate to things - your attitude. The untrained mind is constantly reaching out to pull at desirable objects or pushing away unpleasant objects. The habit of pushing and pulling is the cause of much distress and imbalance. So keeping your balance will help to develop a mind that does not cling or reject, like or dislike, and is without attachment or condemnation.

Developing the ability to adjust and manage your effort in practice is essential. A certain effort is involved in developing moment-to-moment awareness, but it should not be an effort to attain anything in the future. The effort should focus on the present, just paying attention with equanimity to what is happening in the moment.

The Buddha gave an example of just how attentive we should be. He told of a person who was ordered to walk through a crowd with a water jug full to the brim balanced on his head. Behind him walked a soldier with a sword. If a single drop was spilt the soldier would cut off his head! So you can be sure that the person with the jug walked very attentively. That is the quality of attention required in meditation.

Yet, it has to be a relaxed awareness. If there is too much force or strain the least jostling will cause the water to spill. The person with the jug has to be loose and rhythmic, flowing with the changing scene, yet staying attentive in each moment. This is the kind of care we should take in practising awareness, being relaxed yet alert. This

kind of training helps to maintain your balance and the ability to live in harmony with others.

Maintaining your balance in meditation is a matter of harmonising three factors: effort, concentration and awareness. Too much effort makes the mind restless, while too much concentration narrows the awareness and restricts the attention to a single point. Effort and concentration are active factors, while awareness is passive. As you practise, keep in mind the characteristics of these three factors for applying them appropriately will allow you to adjust, harmonise and keep your meditation practice in balance.

Each type of meditation requires a different form of concentration. In Calm or Serenity meditation (Samatha) the meditator fixes on a single object, ignoring other objects to become absorbed in one object. Insight meditation (Vipassana) is a moment-to-moment knowing of various objects as they arise without fixing on any particular object. Actually, Insight meditation is really a matter of an intensification of awareness rather than concentration. So, if you wish to change the meditation mode, from Serenity to Insight, fixing on a single object has to be dropped to allow for an open moment-to-moment awareness of whatever is predominant in your experience.

As Insight meditation is the practice of awareness, it is not necessary to induce concentration as such, because sufficient concentration will naturally arise by continuously maintaining the attention. There is no problem in having too much awareness, as there is in effort and concentration. It is not something that you can overdo, rather it is more likely that there is not enough awareness to help balance the factors of effort and concentration. So, really it's more important to put the effort in maintaining the awareness, as continuity of attention will produce calm and a sweetening of the mind which is the same benefit gained from concentration meditation.

Five ways to maintain the balance

Witnessing your own experience - Noting impartially whatever you are

experiencing, while you are experiencing it, thus creating a 'witnessing' consciousness.

Letting go - Rather than seeking gratification of wishes, impulses and desires, there has to be at least some degree of letting go to create the space to see.

The Removal of the Censor - An attitude of acceptance of all thoughts, feelings, emotions and sensations into awareness without discrimination or selection.

An Attitude of Neutrality - A neutral registering of physical and mental events without the slightest posturing or positioning towards them.

Being Receptive - Meditation is not about being aloof from the experience but being alert, sensitive and intimate with what is observed, from a place of receptivity.

Loving-kindness Meditation

Loving-kindness meditation can be brought in to support the practice of awareness to keep the mind open and sweet. It provides a good balance which compliments insight meditation. Loving-kindness was the taught by the Buddha to develop selfless or altruistic love. Hatred cannot co-exist with loving-kindness. It dissipates if we supplant it with thoughts based on loving-kindness.

It is a fact of life that many people are troubled by negative mind states yet do little about developing skills to deal with it. Yet even when the mind goes sour it is within most people's capacity to arouse feelings of loving-kindness to sweeten it. Loving-kindness, as a meditation practice, specifically retrains the mind to overcome all forms of negativity. It brings about positive attitudinal changes by systematically developing the quality of 'loving-acceptance'. In this way, it acts as a form of self-psychotherapy, a way of healing the troubled mind to free it from its pain and confusion.

Loving-kindness is practised as the first of a series of meditations that produce four qualities of love: Friendliness (metta), Compassion (karuna), Appreciative Joy (mudita) and Equanimity (upekkha). The quality of 'friendliness' is expressed as warmth that reaches out and embraces others. When loving-kindness matures it naturally overflows into compassion, because it empathizes with people's difficulties; one needs to be wary of its the near enemy, pity, which merely mimicks the quality of concern without empathy. The positive expression of empathy is an appreciation of other people's good qualities or good fortune rather than feelings of jealousy towards them, which is the enemy of appreciative joy. This series of meditations comes to maturity in the state of on-looking equanimity. This equanimity has to be cultivated within the context of this series of meditations or else it tends to manifest as its near enemy, indifference or aloofness. It remains caring and on-looking with an equal spread of feeling and acceptance toward all people, relationships and situations without discrimination.

Systematic Loving-kindness Practice

To receive its full benefits, loving-kindness meditation needs to be developed systematically to the level of meditative absorption or one-pointedness. The aim of the practice is to develop the five absorption factors of concentration: the first two are causal factors - applied thought and sustained thought, followed by three effects - rapture, ease-of-mind and one-pointedness or unification of mind. The five absorption factors counteract the five mental hindrances or obstacles for the meditator: applied thought, by arousing energy and effort, overcomes the hindrance of sloth and torpor; sustained thought, by steadying the mind, overcomes skeptical doubt which has the characteristic of wavering; rapture, with its uplifting effervescence, prevails over feelings of ill-will; ease-of-mind, by relieving accumulated stress, counteracts restlessness or agitation of mind; while one-pointedness holds the mind's wanderings in the sense-fields to inhibit sensuality. Achieving deep concentration with this positive mind set will tend to imprint the new positive conditioning while overriding the old negative patterns. In this way, old negative habits

are changed, freeing one to form new positive ways of relating.

How to do loving-kindness meditation

The practice begins with developing loving acceptance of yourself. If resistance is experienced then it indicates feelings of unworthiness are present. No matter, this means there is work to be done, and the practice itself is designed to overcome any feelings of self-doubt or negativity. Then you are ready to develop loving-kindness to others.

Four types of people are chosen to send your loving-kindness to:
1. A respected, beloved person - such as a spiritual teacher;
2. A dearly beloved - which could be a close family member or friend;
3. A neutral person - somebody you know but have no special feeling towards, eg. a person who serves you over a counter;
4. A hostile person - someone you are currently having difficulty with.

Starting with yourself, then moving systematically from person to person in the above order will break down the barriers between the four types people and yourself. It will break down the divisions within your own mind, the source of much of the conflict we experience.

Just a word of caution, it is best to choose a member of the same sex or if you have a sexual bias to your own sex then a person of the opposite sex. This avoids the risk of arousing the near enemy of loving-kindness, lust. Try different people to practise on as some people do not easily fit into the above categories, but do keep to the prescribed order.

Ways of arousing feelings of loving-kindness

Visualization - Bring up a mental picture. See yourself or the person the feeling is directed at smiling back at you or just being joyous.
By reflection - Reflect on the positive qualities of a person and the acts of kindness they have done. And to yourself, make an affirmation, a positive statement about yourself, using your own words.
Auditory - This is the simplest way but probably the most effective.

Repeat an internalized mantra or a word or phrase such as 'loving-kindness'.

The visualizations, reflections and the repetition of loving-kindness are devices to help you arouse a positive feeling of loving-kindness. You can use all of them or one that works best for you. When the positive feeling arises switch from the devices to the feeling, as it is the feeling that is the primary focus. Keep the mind fixed on the feeling, if it strays bring it back to the device or if the feeling weakens or is lost then return to the device, i.e. use the visualization to bring back or strengthen the feeling.

The second stage is Directional Pervasion where you systematically project the aroused feeling of loving-kindness to all points of the compass: north, south, east and west, up and down, and all around. This directional pervasion can be enhanced by bringing to mind friends and communities in the cities, towns and countries around the world.

Non-specific Pervasion tends to spontaneously happen as the practice matures. It is not discriminating. It has no specific object and involves just naturally radiating feelings of universal love. When it arises the practice has come to maturity in that it has changed preferential love, which is an attached love, to an all-embracing, unconditional love!

Loving-kindness is a heart meditation and should not be seen as just a formal sitting practice removed from everyday life. So take your good vibes outside into the streets, at home, at work, into your relationships. Applying the practice to daily life is a matter of purposefully directing a friendly attitude and having openness toward everybody you relate to without discrimination.

May you be happy hearted!

Daily Meditation Practice

The image most often associated with meditation is that of a sitting

Buddha fixed in a crossed-legged posture. While such a representation is undoubtedly inspirational and aesthetically pleasing, it unfortunately suggests to the uninitiated that meditation is a static, 'statue-like' pursuit practised only in meditation halls.

If meditation is to have any relevance to everyday life it has to be done at home. This does not just mean your residence but wherever your attention happens to reside. To meditate at home requires a 'hands-on', dynamic approach that is not restricted to any particular time, place or posture. It should be integrated into the ordinary activities of life and become the basis for a meditative lifestyle in the home and everyday life.

Yet it has to be acknowledged that integrating meditation into daily life is not easy. Therefore you need to purposefully set yourself up to do it; good intention is not enough. There has to be commitment. So consider your priorities: what is more important, hours sitting in front of the TV screen or half an hour or so of sitting meditation? The regular daily home sit is the anchor for the practice. Even if it is only used as a form of mental hygiene, as in 'unstressing', daily practice will greatly contribute towards harmonizing your family and work relationships.

It is important to maintain the daily meditation sits at home as a way of sustaining and stabilizing your practice. With a busy life it is easy to convince yourself that you really haven't the time to maintain regular sitting or when you are feeling tired that you should just drop it. Naturally, when you get stressed or overtired there is resistance to facing the stress by meditating. But it is usually only an initial resistance you have to face before you go through it. Also, do not evaluate your practice, thinking if the meditation isn't of sufficiently good quality you are wasting your time. It is all grist for the mill, you must persist as it is vital to maintain the habit of practice to get the long term benefits.

It is worth quoting from His Holiness, the Dalai Lama for the more compassionate aspect of the practice:
'I myself feel and also tell other Buddhists that the question of

Nirvana will come later. There is not much hurry. But if in day-to-day life you lead a good life, honestly with love, with compassion, with less selfishness then automatically it will lead to Nirvana. Opposite to this, if we talk about Nirvana, talk about philosophy but do not much bother about day-to-day practice, then you may reach a strange Nirvana but will not reach the correct Nirvana because your daily practice is nothing. We must implement the teaching in daily life.'

There is a saying that the beginning and the end of a journey are essentially the same. This is especially true of meditation. For there is nowhere you need to go to discover your true nature other than where you can be now, meditating at your home-base.

This Moment!

We can be grateful to the Buddha for these teachings, but it is by actually implementing the teaching by eating the admired fruit, that you receive the benefits. While it is not easy, yet it is not complicated and there is nothing much else you need to know in order to put into practise the basic instructions you have just read. Start now by paying attention to what is happening in your body and mind at this moment! Delaying in the hope of finding better instructions or expecting ideal conditions to somehow manifest before you can practise is just prolonging the ordeal. The work is in the present, so the blessing is of the present.

The Edicts of King Asoka

King Asoka, the third monarch of the Indian Mauryan dynasty, has come to be regarded as one of the most exemplary rulers in world history.

The British historian H.G. Wells has written: "Amidst the tens of thousands of names of monarchs that crowd the columns of history ... the name of Asoka shines, and shines almost alone, a star." Although Buddhist literature preserved the legend of this ruler -- the story of a cruel and ruthless king who converted to Buddhism and thereafter established a reign of virtue -- definitive historical records of his reign were lacking. Then in the nineteenth century there came to light a large number of edicts, in India, Nepal, Pakistan and Afghanistan. These edicts, inscribed on rocks and pillars, proclaim Asoka's reforms and policies and promulgate his advice to his subjects. The present rendering of these edicts, based on earlier translations, offers us insights into a powerful and capable ruler's attempt to establish an empire on the foundation of righteousness, a reign which makes the moral and spiritual welfare of his subjects its primary concern.

The Australian bhikkhu Ven. S. Dhammika, the compiler of the present work, is the spiritual director of the Buddha Dhamma Mandala Society in Singapore.

* * * * * * * *

PREFACE

This rendering of King Asoka's Edicts is based heavily on Amulyachandra Sen's English translation, which includes the original Magadhi and a Sanskrit and English translation of the text. However, many parts of the edicts are far from clear in meaning and the numerous translations of them differ widely. Therefore, I have also consulted the translations of C. D. Sircar and D. R. Bhandarkar and in parts favored their interpretations. Any credit this small book deserves is due entirely to the labors and learning of these scholars.

INTRODUCTION

//Dhamma sadhu, kiyam cu dhamme ti? Apasinave,
bahu kayane, daya, dane, sace, socaye//.

Dhamma is good, but what constitutes Dhamma?
(It includes) little evil, much good, kindness,
generosity, truthfulness and purity.

King Asoka

With the rediscovery and translation of Indian literature by European scholars in the 19th century, it was not just the religion and philosophy of Buddhism that came to light, but also its many legendary histories and biographies. Amongst this class of literature, one name that came to be noticed was that of Asoka, a good king who was supposed to have ruled India in the distant past. Stories about this king, similar in outline but differing greatly in details, were found in the Divyavadana, the Asokavadana, the Mahavamsa and several other works. They told of an exceptionally cruel and ruthless prince who had many of his brothers killed in order to seize the throne, who was dramatically converted to Buddhism and who ruled wisely and justly for the rest of his life. None of these stories were taken seriously -- after all many pre-modern cultures had legends about "too good to be true" kings who had ruled righteously in the past and who, people hoped, would rule again soon. Most of these legends had their origins more in popular longing to be rid of the despotic and uncaring kings than in any historical fact. And the numerous stories about Asoka were assumed to be the same.

But in 1837, James Prinsep succeeded in deciphering an ancient inscription on a large stone pillar in Delhi. Several other pillars and rocks with similar inscriptions had been known for some time and had attracted the curiosity of scholars. Prinsep's inscription proved

to be a series of edicts issued by a king calling himself "Beloved-of-the-Gods, King Piyadasi." In the following decades, more and more edicts by this same king were discovered and with increasingly accurate decipherment of their language, a more complete picture of this man and his deeds began to emerge. Gradually, it dawned on scholars that the King Piyadasi of the edicts might be the King Asoka so often praised in Buddhist legends. However, it was not until 1915, when another edict actually mentioning the name Asoka was discovered, that the identification was confirmed. Having been forgotten for nearly 700 years, one of the greatest men in history became known to the world once again.

Asoka's edicts are mainly concerned with the reforms he instituted and the moral principles he recommended in his attempt to create a just and humane society. As such, they give us little information about his life, the details of which have to be culled from other sources. Although the exact dates of Asoka's life are a matter of dispute among scholars, he was born in about 304 B.C. and became the third king of the Mauryan dynasty after the death of his father, Bindusara. His given name was Asoka but he assumed the title Devanampiya Piyadasi which means "Beloved-of-the-Gods, He Who Looks On With Affection." There seems to have been a two-year war of succession during which at least one of Asoka's brothers was killed. In 262 B.C., eight years after his coronation, Asoka's armies attacked and conquered Kalinga, a country that roughly corresponds to the modern state of Orissa. The loss of life caused by battle, reprisals, deportations and the turmoil that always exists in the aftermath of war so horrified Asoka that it brought about a complete change in his personality. It seems that Asoka had been calling himself a Buddhist for at least two years prior to the Kalinga war, but his commitment to Buddhism was only lukewarm and perhaps had a political motive behind it. But after the war Asoka dedicated the rest of his life trying to apply Buddhist principles to the administration of his vast empire. He had a crucial part to play in helping Buddhism to spread both throughout India and abroad, and probably built the first major Buddhist monuments. Asoka died in 232 B.C. in the thirty-eighth year of his reign.

Asoka's edicts are to be found scattered in more than thirty places throughout India, Nepal, Pakistan and Afghanistan. Most of them are written in Brahmi script from which all Indian scripts and many of those used in Southeast Asia later developed. The language used in the edicts found in the eastern part of the sub-continent is a type of Magadhi, probably the official language of Asoka's court. The language used in the edicts found in the western part of India is closer to Sanskrit although one bilingual edict in Afghanistan is written in Aramaic and Greek. Asoka's edicts, which comprise the earliest decipherable corpus of written documents from India, have survived throughout the centuries because they are written on rocks and stone pillars. These pillars in particular are testimony to the technological and artistic genius of ancient Indian civilization. Originally, there must have been many of them, although only ten with inscriptions still survive. Averaging between forty and fifty feet in height, and weighing up to fifty tons each, all the pillars were quarried at Chunar, just south of Varanasi and dragged, sometimes hundreds of miles, to where they were erected. Each pillar was originally capped by a capital, sometimes a roaring lion, a noble bull or a spirited horse, and the few capitals that survive are widely recognized as masterpieces of Indian art. Both the pillars and the capitals exhibit a remarkable mirror-like polish that has survived despite centuries of exposure to the elements. The location of the rock edicts is governed by the availability of suitable rocks, but the edicts on pillars are all to be found in very specific places. Some, like the Lumbini pillar, mark the Buddha's birthplace, while its inscriptions commemorate Asoka's pilgrimage to that place. Others are to be found in or near important population centres so that their edicts could be read by as many people as possible.

There is little doubt that Asoka's edicts were written in his own words rather than in the stylistic language in which royal edicts or proclamations in the ancient world were usually written in. Their distinctly personal tone gives us a unique glimpse into the personality of this complex and remarkable man. Asoka's style tends to be somewhat repetitious and plodding as if explaining something to one who has difficulty in understanding. Asoka frequently refers to the good works he has done, although not in a boastful way, but more, it

seems, to convince the reader of his sincerity. In fact, an anxiousness to be thought of as a sincere person and a good administrator is present in nearly every edict. Asoka tells his subjects that he looked upon them as his children, that their welfare is his main concern; he apologizes for the Kalinga war and reassures the people beyond the borders of his empire that he has no expansionist intentions towards them. Mixed with this sincerity, there is a definite puritanical streak in Asoka's character suggested by his disapproval of festivals and of religious rituals many of which while being of little value were nonetheless harmless.

It is also very clear that Buddhism was the most influential force in Asoka's life and that he hoped his subjects likewise would adopt his religion. He went on pilgrimages to Lumbini and Bodh Gaya, sent teaching monks to various regions in India and beyond its borders, and he was familiar enough with the sacred texts to recommend some of them to the monastic community. It is also very clear that Asoka saw the reforms he instituted as being a part of his duties as a Buddhist. But, while he was an enthusiastic Buddhist, he was not partisan towards his own religion or intolerant of other religions. He seems to have genuinely hoped to be able to encourage everyone to practice his or her own religion with the same conviction that he practiced his.

Scholars have suggested that because the edicts say nothing about the philosophical aspects of Buddhism, Asoka had a simplistic and naive understanding of the Dhamma. This view does not take into account the fact that the purpose of the edicts was not to expound the truths of Buddhism, but to inform the people of Asoka's reforms and to encourage them to be more generous, kind and moral. This being the case, there was no reason for Asoka to discuss Buddhist philosophy. Asoka emerges from his edicts as an able administrator, an intelligent human being and as a devoted Buddhist, and we could expect him to take as keen an interest in Buddhist philosophy as he did in Buddhist practice.

The contents of Asoka's edicts make it clear that all the legends about his wise and humane rule are more than justified and qualify him to be ranked as one of the greatest rulers. In his edicts, he spoke of

what might be called state morality, and private or individual morality. The first was what he based his administration upon and what he hoped would lead to a more just, more spiritually inclined society, while the second was what he recommended and encouraged individuals to practice. Both these types of morality were imbued with the Buddhist values of compassion, moderation, tolerance and respect for all life. The Asokan state gave up the predatory foreign policy that had characterized the Mauryan empire up till then and replaced it with a policy of peaceful co-existence. The judicial system was reformed in order to make it more fair, less harsh and less open to abuse, while those sentenced to death were given a stay of execution to prepare appeals and regular amnesties were given to prisoners. State resources were used for useful public works like the importation and cultivation of medical herbs, the building of rest houses, the digging of wells at regular intervals along main roads and the planting of fruit and shade trees. To ensue that these reforms and projects were carried out, Asoka made himself more accessible to his subjects by going on frequent inspection tours and he expected his district officers to follow his example. To the same end, he gave orders that important state business or petitions were never to be kept from him no matter what he was doing at the time. The state had a responsibility not just to protect and promote the welfare of its people but also its wildlife. Hunting certain species of wild animals was banned, forest and wildlife reserves were established and cruelty to domestic and wild animals was prohibited. The protection of all religions, their promotion and the fostering of harmony between them, was also seen as one of the duties of the state. It even seems that something like a Department of Religious Affairs was established with officers called Dhamma Mahamatras whose job it was to look after the affairs of various religious bodies and to encourage the practice of religion.

The individual morality that Asoka hoped to foster included respect (//susrusa//) towards parents, elders, teachers, friends, servants, ascetics and brahmins -- behavior that accords with the advice given to Sigala by the Buddha (Digha Nikaya, Discourse No. 31). He encouraged generosity (//dana//) to the poor (//kapana valaka//), to ascetics and brahmins, and to friends and relatives. Not surprisingly, Asoka encouraged harmlessness towards all life (//avihisa bhutanam//).

In conformity with the Buddha's advice in the Anguttara Nikaya, II:282, he also considered moderation in spending and moderation in saving to be good (//apa vyayata apa bhadata//). Treating people properly (//samya pratipati//), he suggested, was much more important than performing ceremonies that were supposed to bring good luck. Because it helped promote tolerance and mutual respect, Asoka desired that people should be well-learned (//bahu sruta//) in the good doctrines (//kalanagama//) of other people's religions. The qualities of heart that are recommended by Asoka in the edicts indicate his deep spirituality. They include kindness (//daya//), self-examination (//palikhaya//), truthfulness (//sace//), gratitude (//katamnata//), purity of heart (//bhava sudhi//), enthusiasm (//usahena//), strong loyalty (//dadha bhatita//), self-control (//sayame//) and love of the Dhamma (//Dhamma kamata//).

We have no way of knowing how effective Asoka's reforms were or how long they lasted but we do know that monarchs throughout the ancient Buddhist world were encouraged to look to his style of government as an ideal to be followed. King Asoka has to be credited with the first attempt to develop a Buddhist polity. Today, with widespread disillusionment in prevailing ideologies and the search for a political philosophy that goes beyond greed (capitalism), hatred (communism) and delusion (dictatorships led by "infallible" leaders), Asoka's edicts may make a meaningful contribution to the development of a more spiritually based political system.

* * * * * * * *

THE FOURTEEN ROCK EDICTS

Beloved-of-the-Gods, King Piyadasi, has caused this Dhamma edict to be written.[1] Here (in my domain) no living beings are to be slaughtered or offered in sacrifice. Nor should festivals be held, for Beloved-of-the-Gods, King Piyadasi, sees much to object to in such festivals, although there are some festivals that Beloved-of-the-Gods, King Piyadasi, does approve of.

Formerly, in the kitchen of Beloved-of-the-Gods, King Piyadasi, hundreds of thousands of animals were killed every day to make curry. But now with the writing of this Dhamma edict only three creatures, two peacocks and a deer are killed, and the deer not always. And in time, not even these three creatures will be killed.

2

Everywhere [2] within Beloved-of-the-Gods, King Piyadasi's domain, and among the people beyond the borders, the Cholas, the Pandyas, the Satiyaputras, the Keralaputras, as far as Tamraparni and where the Greek king Antiochos rules, and among the kings who are neighbors of Antiochos,[3] everywhere has Beloved-of-the-Gods, King Piyadasi, made provision for two types of medical treatment: medical treatment for humans and medical treatment for animals. Wherever medical herbs suitable for humans or animals are not available, I have had them imported and grown. Wherever medical roots or fruits are not available I have had them imported and grown. Along roads I have had wells dug and trees planted for the benefit of humans and animals.[4]

3

Beloved-of-the-Gods, King Piyadasi, speaks thus:[5] Twelve years after my coronation this has been ordered -- Everywhere in my domain the Yuktas, the Rajjukas and the Pradesikas shall go on inspection tours every five years for the purpose of Dhamma instruction and also to conduct other business.[6]

Respect for mother and father is good, generosity to friends, acquaintances, relatives, Brahmans and ascetics is good, not killing living beings is good, moderation in spending and moderation in saving is good. The Council shall notify the Yuktas about the observance of these instructions in these very words.

4

In the past, for many hundreds of years, killing or harming living beings and improper behavior towards relatives, and improper behavior towards Brahmans and ascetics has increased.[7] But now due to Beloved-of-the-Gods, King Piyadasi's Dhamma practice, the sound of the drum has been replaced by the sound of the Dhamma.[8] The sighting of heavenly cars, auspicious elephants, bodies of fire and other divine sightings has not happened for many hundreds of years. But now because Beloved-of-the-Gods, King Piyadasi promotes restraint in the killing and harming of living beings, proper behavior towards relatives, Brahmans and ascetics, and respect for mother, father and elders, such sightings have increased.[9]

These and many other kinds of Dhamma practice have been encouraged by Beloved-of-the-Gods, King Piyadasi, and he will continue to promote Dhamma practice. And the sons, grandsons and great-grandsons of Beloved-of-the-Gods, King Piyadasi, too will continue to promote Dhamma practice until the end of time; living by Dhamma and virtue, they will instruct in Dhamma. Truly, this is the highest work, to instruct in Dhamma. But practicing the Dhamma cannot be done by one who is devoid of virtue and therefore its promotion and growth is commendable.

This edict has been written so that it may please my successors to devote themselves to promoting these things and not allow them to decline. Beloved-of-the-Gods, King Piyadasi, has had this written twelve years after his coronation.

5

Beloved-of-the-Gods, King Piyadasi, speaks thus:[10] To do good is difficult. One who does good first does something hard to do. I have done many good deeds, and, if my sons, grandsons and their descendants up to the end of the world act in like manner, they too will do much good. But whoever amongst them neglects this, they will do evil. Truly, it is easy to do evil.[11]

In the past there were no Dhamma Mahamatras but such officers were appointed by me thirteen years after my coronation. Now they work among all religions for the establishment of Dhamma, for the promotion of Dhamma, and for the welfare and happiness of all who are devoted to Dhamma. They work among the Greeks, the Kambojas, the Gandharas, the Rastrikas, the Pitinikas and other peoples on the western borders.[12] They work among soldiers, chiefs, Brahmans, householders, the poor, the aged and those devoted to Dhamma -- for their welfare and happiness -- so that they may be free from harassment. They (Dhamma Mahamatras) work for the proper treatment of prisoners, towards their unfettering, and if the Mahamatras think, "This one has a family to support," "That one has been bewitched," "This one is old," then they work for the release of such prisoners. They work here, in outlying towns, in the women's quarters belonging to my brothers and sisters, and among my other relatives. They are occupied everywhere. These Dhamma Mahamatras are occupied in my domain among people devoted to Dhamma to determine who is devoted to Dhamma, who is established in Dhamma, and who is generous.

This Dhamma edict has been written on stone so that it might endure long and that my descendants might act in conformity with it.

6

Beloved-of-the-Gods, King Piyadasi, speaks thus:[13] In the past,

state business was not transacted nor were reports delivered to the king at all hours. But now I have given this order, that at any time, whether I am eating, in the women's quarters, the bed chamber, the chariot, the palanquin, in the park or wherever, reporters are to be posted with instructions to report to me the affairs of the people so that I might attend to these affairs wherever I am. And whatever I orally order in connection with donations or proclamations, or when urgent business presses itself on the Mahamatras, if disagreement or debate arises in the Council, then it must be reported to me immediately. This is what I have ordered. I am never content with exerting myself or with despatching business. Truly, I consider the welfare of all to be my duty, and the root of this is exertion and the prompt despatch of business. There is no better work than promoting the welfare of all the people and whatever efforts I am making is to repay the debt I owe to all beings to assure their happiness in this life, and attain heaven in the next.

Therefore this Dhamma edict has been written to last long and that my sons, grandsons and great-grandsons might act in conformity with it for the welfare of the world. However, this is difficult to do without great exertion.

7

Beloved-of-the-Gods, King Piyadasi, desires that all religions should reside everywhere, for all of them desire self-control and purity of heart.[14] But people have various desires and various passions, and they may practice all of what they should or only a part of it. But one who receives great gifts yet is lacking in self-control, purity of heart, gratitude and firm devotion, such a person is mean.

8

In the past kings used to go out on pleasure tours during which there

was hunting and other entertainment.[15] But ten years after Beloved-of-the-Gods had been coronated, he went on a tour to Sambodhi and thus instituted Dhamma tours.[16] During these tours, the following things took place: visits and gifts to Brahmans and ascetics, visits and gifts of gold to the aged, visits to people in the countryside, instructing them in Dhamma, and discussing Dhamma with them as is suitable. It is this that delights Beloved-of-the-Gods, King Piyadasi, and is, as it were, another type of revenue.

9

Beloved-of-the-Gods, King Piyadasi, speaks thus:[17] In times of sickness, for the marriage of sons and daughters, at the birth of children, before embarking on a journey, on these and other occasions, people perform various ceremonies. Women in particular perform many vulgar and worthless ceremonies. These types of ceremonies can be performed by all means, but they bear little fruit. What does bear great fruit, however, is the ceremony of the Dhamma. This involves proper behavior towards servants and employees, respect for teachers, restraint towards living beings, and generosity towards ascetics and Brahmans. These and other things constitute the ceremony of the Dhamma. Therefore a father, a son, a brother, a master, a friend, a companion, and even a neighbor should say: "This is good, this is the ceremony that should be performed until its purpose is fulfilled, this I shall do."[18] Other ceremonies are of doubtful fruit, for they may achieve their purpose, or they may not, and even if they do, it is only in this world. But the ceremony of the Dhamma is timeless. Even if it does not achieve its purpose in this world, it produces great merit in the next, whereas if it does achieve its purpose in this world, one gets great merit both here and there through the ceremony of the Dhamma.

10

Beloved-of-the-Gods, King Piyadasi, does not consider glory and fame to be of great account unless they are achieved through having my subjects respect Dhamma and practice Dhamma, both now and in the future.[19] For this alone does Beloved-of-the-Gods, King Piyadasi, desire glory and fame. And whatever efforts Beloved-of-the-Gods, King Piyadasi, is making, all of that is only for the welfare of the people in the next world, and that they will have little evil. And being without merit is evil. This is difficult for either a humble person or a great person to do except with great effort, and by giving up other interests. In fact, it may be even more difficult for a great person to do.

11

Beloved-of-the-Gods, King Piyadasi, speaks thus:[20] There is no gift like the gift of the Dhamma,[21] (no acquaintance like) acquaintance with Dhamma, (no distribution like) distribution of Dhamma, and (no kinship like) kinship through Dhamma. And it consists of this: proper behavior towards servants and employees, respect for mother and father, generosity to friends, companions, relations, Brahmans and ascetics, and not killing living beings. Therefore a father, a son, a brother, a master, a friend, a companion or a neighbor should say: "This is good, this should be done." One benefits in this world and gains great merit in the next by giving the gift of the Dhamma.

12

Beloved-of-the-Gods, King Piyadasi, honors both ascetics and the householders of all religions, and he honors them with gifts and honors of various kinds.[22] But Beloved-of-the-Gods, King Piyadasi, does not value gifts and honors as much as he values this -- that there should be growth in the essentials of all religions.[23] Growth in essentials can be done in different ways, but all of them have as

their root restraint in speech, that is, not praising one's own religion, or condemning the religion of others without good cause. And if there is cause for criticism, it should be done in a mild way. But it is better to honor other religions for this reason. By so doing, one's own religion benefits, and so do other religions, while doing otherwise harms one's own religion and the religions of others. Whoever praises his own religion, due to excessive devotion, and condemns others with the thought "Let me glorify my own religion," only harms his own religion. Therefore contact (between religions) is good.[24] One should listen to and respect the doctrines professed by others. Beloved-of-the-Gods, King Piyadasi, desires that all should be well-learned in the good doctrines of other religions.

Those who are content with their own religion should be told this: Beloved-of-the-Gods, King Piyadasi, does not value gifts and honors as much as he values that there should be growth in the essentials of all religions. And to this end many are working -- Dhamma Mahamatras, Mahamatras in charge of the women's quarters, officers in charge of outlying areas, and other such officers. And the fruit of this is that one's own religion grows and the Dhamma is illuminated also.

13

Beloved-of-the-Gods, King Piyadasi, conquered the Kalingas eight years after his coronation.[25] One hundred and fifty thousand were deported, one hundred thousand were killed and many more died (from other causes). After the Kalingas had been conquered, Beloved-of-the-Gods came to feel a strong inclination towards the Dhamma, a love for the Dhamma and for instruction in Dhamma. Now Beloved-of-the-Gods feels deep remorse for having conquered the Kalingas.

Indeed, Beloved-of-the-Gods is deeply pained by the killing, dying and deportation that take place when an unconquered country is conquered. But Beloved-of-the-Gods is pained even more by this -- that Brahmans, ascetics, and householders of different religions who live

in those countries, and who are respectful to superiors, to mother and father, to elders, and who behave properly and have strong loyalty towards friends, acquaintances, companions, relatives, servants and employees -- that they are injured, killed or separated from their loved ones. Even those who are not affected (by all this) suffer when they see friends, acquaintances, companions and relatives affected. These misfortunes befall all (as a result of war), and this pains Beloved-of-the-Gods.

There is no country, except among the Greeks, where these two groups, Brahmans and ascetics, are not found, and there is no country where people are not devoted to one or another religion.[26] Therefore the killing, death or deportation of a hundredth, or even a thousandth part of those who died during the conquest of Kalinga now pains Beloved-of-the-Gods. Now Beloved-of-the-Gods thinks that even those who do wrong should be forgiven where forgiveness is possible.

Even the forest people, who live in Beloved-of-the-Gods' domain, are entreated and reasoned with to act properly. They are told that despite his remorse Beloved-of-the-Gods has the power to punish them if necessary, so that they should be ashamed of their wrong and not be killed. Truly, Beloved-of-the-Gods desires non-injury, restraint and impartiality to all beings, even where wrong has been done.

Now it is conquest by Dhamma that Beloved-of-the-Gods considers to be the best conquest.[27] And it (conquest by Dhamma) has been won here, on the borders, even six hundred yojanas away, where the Greek king Antiochos rules, beyond there where the four kings named Ptolemy, Antigonos, Magas and Alexander rule, likewise in the south among the Cholas, the Pandyas, and as far as Tamraparni.[28] Here in the king's domain among the Greeks, the Kambojas, the Nabhakas, the Nabhapamkits, the Bhojas, the Pitinikas, the Andhras and the Palidas, everywhere people are following Beloved-of-the-Gods' instructions in Dhamma. Even where Beloved-of-the-Gods' envoys have not been, these people too, having heard of the practice of Dhamma and the ordinances and instructions in Dhamma given by Beloved-of-the-Gods, are following it and will continue to do so. This conquest has been won everywhere, and it gives great joy -- the joy which only conquest by Dhamma can give.

But even this joy is of little consequence. Beloved-of-the-Gods considers the great fruit to be experienced in the next world to be more important.

I have had this Dhamma edict written so that my sons and great-grandsons may not consider making new conquests, or that if military conquests are made, that they be done with forbearance and light punishment, or better still, that they consider making conquest by Dhamma only, for that bears fruit in this world and the next. May all their intense devotion be given to this which has a result in this world and the next.

14

Beloved-of-the-Gods, King Piyadasi, has had these Dhamma edicts written in brief, in medium length, and in extended form.[29] Not all of them occur everywhere, for my domain is vast, but much has been written, and I will have still more written. And also there are some subjects here that have been spoken of again and again because of their sweetness, and so that the people may act in accordance with them. If some things written are incomplete, this is because of the locality, or in consideration of the object, or due to the fault of the scribe.

* * *

KALINGA ROCK EDICTS

1

Beloved-of-the-Gods says that the Mahamatras of Tosali who are

judicial officers in the city are to be told this:[30] I wish to see that everything I consider to be proper is carried out in the right way. And I consider instructing you to be the best way of accomplishing this. I have placed you over many thousands of people that you may win the people's affection.

All men are my children. What I desire for my own children, and I desire their welfare and happiness both in this world and the next, that I desire for all men. You do not understand to what extent I desire this, and if some of you do understand, you do not understand the full extent of my desire.

You must attend to this matter. While being completely law-abiding, some people are imprisoned, treated harshly and even killed without cause so that many people suffer. Therefore your aim should be to act with impartiality. It is because of these things -- envy, anger, cruelty, hate, indifference, laziness or tiredness -- that such a thing does not happen. Therefore your aim should be: "May these things not be in me." And the root of this is non-anger and patience. Those who are bored with the administration of justice will not be promoted; (those who are not) will move upwards and be promoted. Whoever among you understands this should say to his colleagues: "See that you do your duty properly. Such and such are Beloved-of-the-Gods' instructions." Great fruit will result from doing your duty, while failing in it will result in gaining neither heaven nor the king's pleasure. Failure in duty on your part will not please me. But done properly, it will win you heaven and you will be discharging your debts to me.

This edict is to be listened to on Tisa day, between Tisa days, and on other suitable occasions, it should be listened to even by a single person. Acting thus, you will be doing your duty.

This edict has been written for the following purpose: that the judicial officers of the city may strive to do their duty and that the people under them might not suffer unjust imprisonment or harsh treatment. To achieve this, I will send out Mahamatras every five years who are not harsh or cruel, but who are merciful and who can

ascertain if the judicial officers have understood my purpose and are acting according to my instructions. Similarly, from Ujjayini, the prince will send similar persons with the same purpose without allowing three years to elapse. Likewise from Takhasila also. When these Mahamatras go on tours of inspection each year, then without neglecting their normal duties, they will ascertain if judicial officers are acting according to the king's instructions.

2

Beloved-of-the-Gods speaks thus:[31] This royal order is to be addressed to the Mahamatras at Samapa. I wish to see that everything I consider to be proper is carried out in the right way. And I consider instructing you to be the best way of accomplishing this. All men are my children. What I desire for my own children, and I desire their welfare and happiness both in this world and the next, that I desire for all men.[32]

The people of the unconquered territories beyond the borders might think: "What is the king's intentions towards us?" My only intention is that they live without fear of me, that they may trust me and that I may give them happiness, not sorrow. Furthermore, they should understand that the king will forgive those who can be forgiven, and that he wishes to encourage them to practice Dhamma so that they may attain happiness in this world and the next. I am telling you this so that I may discharge the debts I owe, and that in instructing you, that you may know that my vow and my promise will not be broken. Therefore acting in this way, you should perform your duties and assure them (the people beyond the borders) that: "The king is like a father. He feels towards us as he feels towards himself. We are to him like his own children."

By instructing you and informing you of my vow and my promise I shall be applying myself in complete fullness to achieving this object. You are able indeed to inspire them with confidence and to secure their welfare and happiness in this world and the next, and by

acting thus, you will attain heaven as well as discharge the debts you owe to me. And so that the Mahamatras can devote themselves at all times to inspiring the border areas with confidence and encouraging them to practice Dhamma, this edict has been written here.

This edict is to be listened to every four months on Tisa day, between Tisa days, and on other suitable occasions, it should be listened to even by a single person. Acting thus, you will be doing your duty.

* * *

MINOR ROCK EDICTS

1

Beloved-of-the-Gods speaks thus:[33] It is now more than two and a half years since I became a lay-disciple, but until now I have not been very zealous.[34] But now that I have visited the Sangha for more than a year, I have become very zealous. Now the people in India who have not associated with the gods do so. This is the result of zeal and it is not just the great who can do this. Even the humble, if they are zealous, can attain heaven. And this proclamation has been made with this aim. Let both humble and great be zealous, let even those on the borders know and let zeal last long. Then this zeal will increase, it will greatly increase, it will increase up to one-and-a-half times. This message has been proclaimed two hundred and fifty-six times by the king while on tour.

2

Beloved-of-the-Gods speaks thus:[35] Father and mother should be respected and so should elders, kindness to living beings should be made strong and the truth should be spoken. In these ways, the Dhamma should be promoted. Likewise, a teacher should be honored by his pupil and proper manners should be shown towards relations. This is an ancient rule that conduces to long life. Thus should one act. Written by the scribe Chapala.

3

Piyadasi, King of Magadha, saluting the Sangha and wishing them good health and happiness, speaks thus:[36] You know, reverend sirs, how great my faith in the Buddha, the Dhamma and Sangha is. Whatever, reverend sirs, has been spoken by Lord Buddha, all that is well-spoken.[37] I consider it proper, reverend sirs, to advise on how the good Dhamma should last long.

These Dhamma texts -- Extracts from the Discipline, the Noble Way of Life, the Fears to Come, the Poem on the Silent Sage, the Discourse on the Pure Life, Upatisa's Questions, and the Advice to Rahula which was spoken by the Buddha concerning false speech -- these Dhamma texts, reverend sirs, I desire that all the monks and nuns may constantly listen to and remember.[38] Likewise the laymen and laywomen. I have had this written that you may know my intentions.

* * *

THE SEVEN PILLAR EDICTS

1

Beloved-of-the-Gods speaks thus:[39] This Dhamma edict was written twenty-six years after my coronation. Happiness in this world and the next is difficult to obtain without much love for the Dhamma, much self-examination, much respect, much fear (of evil), and much enthusiasm. But through my instruction this regard for Dhamma and love of Dhamma has grown day by day, and will continue to grow. And my officers of high, low and middle rank are practicing and conforming to Dhamma, and are capable of inspiring others to do the same. Mahamatras in border areas are doing the same. And these are my instructions: to protect with Dhamma, to make happiness through Dhamma and to guard with Dhamma.

2

Beloved-of-the-Gods, King Piyadasi, speaks thus: Dhamma is good, but what constitutes Dhamma? (It includes) little evil, much good, kindness, generosity, truthfulness and purity. I have given the gift of sight in various ways.[40] To two-footed and four-footed beings, to birds and aquatic animals, I have given various things including the gift of life. And many other good deeds have been done by me.

This Dhamma edict has been written that people might follow it and it might endure for a long time. And the one who follows it properly will do something good.

3

Beloved-of-the-Gods, King Piyadasi, speaks thus: People see only their good deeds saying, "I have done this good deed." But they do not see their evil deeds saying, "I have done this evil deed" or "This is called evil." But this (tendency) is difficult to see.[41] One should think like this: "It is these things that lead to evil, to violence,

to cruelty, anger, pride and jealousy. Let me not ruin myself with these things." And further, one should think: "This leads to happiness in this world and the next."

4

Beloved-of-the-Gods speaks thus: This Dhamma edict was written twenty-six years after my coronation. My Rajjukas are working among the people, among many hundreds of thousands of people. The hearing of petitions and the administration of justice has been left to them so that they can do their duties confidently and fearlessly and so that they can work for the welfare, happiness and benefit of the people in the country. But they should remember what causes happiness and sorrow, and being themselves devoted to Dhamma, they should encourage the people in the country (to do the same), that they may attain happiness in this world and the next. These Rajjukas are eager to serve me. They also obey other officers who know my desires, who instruct the Rajjukas so that they can please me. Just as a person feels confident having entrusted his child to an expert nurse thinking: "The nurse will keep my child well," even so, the Rajjukas have been appointed by me for the welfare and happiness of the people in the country.

The hearing of petitions and the administration of justice have been left to the Rajjukas so that they can do their duties unperturbed, fearlessly and confidently. It is my desire that there should be uniformity in law and uniformity in sentencing. I even go this far, to grant a three-day stay for those in prison who have been tried and sentenced to death. During this time their relatives can make appeals to have the prisoners' lives spared. If there is none to appeal on their behalf, the prisoners can give gifts in order to make merit for the next world, or observe fasts. Indeed, it is my wish that in this way, even if a prisoner's time is limited, he can prepare for the next world, and that people's Dhamma practice, self-control and generosity may grow.

5

Beloved-of-the-Gods, King Piyadasi, speaks thus: Twenty-six years after my coronation various animals were declared to be protected -- parrots, mainas, //aruna//, ruddy geese, wild ducks, //nandimukhas, gelatas//, bats, queen ants, terrapins, boneless fish, //vedareyaka//, //gangapuputaka//, //sankiya// fish, tortoises, porcupines, squirrels, deer, bulls, //okapinda//, wild asses, wild pigeons, domestic pigeons and all four-footed creatures that are neither useful nor edible.[42] Those nanny goats, ewes and sows which are with young or giving milk to their young are protected, and so are young ones less than six months old. Cocks are not to be caponized, husks hiding living beings are not to be burnt and forests are not to be burnt either without reason or to kill creatures. One animal is not to be fed to another. On the three Caturmasis, the three days of Tisa and during the fourteenth and fifteenth of the Uposatha, fish are protected and not to be sold. During these days animals are not to be killed in the elephant reserves or the fish reserves either. On the eighth of every fortnight, on the fourteenth and fifteenth, on Tisa, Punarvasu, the three Caturmasis and other auspicious days, bulls are not to be castrated, billy goats, rams, boars and other animals that are usually castrated are not to be. On Tisa, Punarvasu, Caturmasis and the fortnight of Caturmasis, horses and bullocks are not be branded.

In the twenty-six years since my coronation prisoners have been given amnesty on twenty-five occasions.

6

Beloved-of-the-Gods speaks thus: Twelve years after my coronation I started to have Dhamma edicts written for the welfare and happiness of the people, and so that not transgressing them they might grow in the Dhamma. Thinking: "How can the welfare and happiness of the people be secured?" I give attention to my relatives, to those dwelling near and

those dwelling far, so I can lead them to happiness and then I act accordingly. I do the same for all groups. I have honored all religions with various honors. But I consider it best to meet with people personally.

This Dhamma edict was written twenty-six years after my coronation.

7

Beloved-of-the-Gods speaks thus: In the past kings desired that the people might grow through the promotion of the Dhamma. But despite this, people did not grow through the promotion of the Dhamma. Beloved-of-the-Gods, King Piyadasi, said concerning this: "It occurs to me that in the past kings desired that the people might grow through the promotion of the Dhamma. But despite this, people did not grow through the promotion of the Dhamma. Now how can the people be encouraged to follow it? How can the people be encouraged to grow through the promotion of the Dhamma? How can I elevate them by promoting the Dhamma?" Beloved-of-the-Gods, King Piyadasi, further said concerning this: "It occurs to me that I shall have proclamations on Dhamma announced and instruction on Dhamma given. When people hear these, they will follow them, elevate themselves and grow considerably through the promotion of the Dhamma." It is for this purpose that proclamations on Dhamma have been announced and various instructions on Dhamma have been given and that officers who work among many promote and explain them in detail. The Rajjukas who work among hundreds of thousands of people have likewise been ordered: "In this way and that encourage those who are devoted to Dhamma." Beloved-of-the-Gods speaks thus: "Having this object in view, I have set up Dhamma pillars, appointed Dhamma Mahamatras, and announced Dhamma proclamations."

Beloved-of-the-Gods, King Piyadasi, says: Along roads I have had banyan trees planted so that they can give shade to animals and men, and I have had mango groves planted. At intervals of eight //krosas//, I have had wells dug, rest-houses built, and in various places, I have

had watering-places made for the use of animals and men. But these are but minor achievements. Such things to make the people happy have been done by former kings. I have done these things for this purpose, that the people might practice the Dhamma.

Beloved-of-the-Gods, King Piyadasi, speaks thus: My Dhamma Mahamatras too are occupied with various good works among the ascetics and householders of all religions. I have ordered that they should be occupied with the affairs of the Sangha. I have also ordered that they should be occupied with the affairs of the Brahmans and the Ajivikas. I have ordered that they be occupied with the Niganthas.[43] In fact, I have ordered that different Mahamatras be occupied with the particular affairs of all different religions. And my Dhamma Mahamatras likewise are occupied with these and other religions.

Beloved-of-the-Gods, King Piyadasi, speaks thus: These and other principal officers are occupied with the distribution of gifts, mine as well as those of the queens. In my women's quarters, they organize various charitable activities here and in the provinces. I have also ordered my sons and the sons of other queens to distribute gifts so that noble deeds of Dhamma and the practice of Dhamma may be promoted. And noble deeds of Dhamma and the practice of Dhamma consist of having kindness, generosity, truthfulness, purity, gentleness and goodness increase among the people.

Beloved-of-the-Gods, King Piyadasi, speaks thus: Whatever good deeds have been done by me, those the people accept and those they follow. Therefore they have progressed and will continue to progress by being respectful to mother and father, respectful to elders, by courtesy to the aged and proper behavior towards Brahmans and ascetics, towards the poor and distressed, and even towards servants and employees.

Beloved-of-the-Gods, King Piyadasi, speaks thus: This progress among the people through Dhamma has been done by two means, by Dhamma regulations and by persuasion. Of these, Dhamma regulation is of little effect, while persuasion has much more effect. The Dhamma regulations I have given are that various animals must be protected.

And I have given many other Dhamma regulations also. But it is by persuasion that progress among the people through Dhamma has had a greater effect in respect of harmlessness to living beings and non-killing of living beings.

Concerning this, Beloved-of-the-Gods says: Wherever there are stone pillars or stone slabs, there this Dhamma edict is to be engraved so that it may long endure. It has been engraved so that it may endure as long as my sons and great-grandsons live and as long as the sun and the moon shine, and so that people may practice it as instructed. For by practicing it happiness will be attained in this world and the next.

This Dhamma edict has been written by me twenty-seven years after my coronation.

* * *

THE MINOR PILLAR EDICTS

1

Twenty years after his coronation, Beloved-of-the-Gods, King Piyadasi, visited this place and worshipped because here the Buddha, the sage of the Sakyans, was born.[44] He had a stone figure and a pillar set up and because the Lord was born here, the village of Lumbini was exempted from tax and required to pay only one eighth of the produce.

2

Beloved-of-the-Gods commands:[45] The Mahamatras at Kosambi (are to be told: Whoever splits the Sangha) which is now united, is not to be

admitted into the Sangha. Whoever, whether monk or nun, splits the Sangha is to be made to wear white clothes and to reside somewhere other than in a monastery.[46]

* * * * * * * *

NOTES

1. Girnar version issued in 257 B.C. These fourteen edicts, with minor differences, are found in five different places throughout India. In two other places, they are found minus numbers 11, 12 and 13.

2. Girnar version, issued in 257 B.C.

3. The Cholas and Pandyas were south Indian peoples living outside Asoka's empire. The Satiyaputras and Keralaputras lived on the southwest seaboard of India. Tamraparni is one of the ancient names for Sri Lanka. On Antiochos see Note 28.

4. By so doing, Asoka was following the advice given by the Buddha at Samyutta Nikaya, I:33.

5. Girnar version, issued in 257 B.C.

6. The exact duties of these royal officers are not known.

7. Girnar version, issued in 257 B.C.

8. This probably refers to the drum that was beaten to announce the punishment of lawbreakers. See Samyutta Nikaya, IV:244.

9. Like many people in the ancient world, Asoka believed that when a just king ruled, there would be many auspicious portents.

10. Kalsi version, issued in 256 B.C.

11. This seems to be a paraphrase of Dhammapada 163.

12. The Greeks (Yona) settled in large numbers in what is now Afghanistan and Pakistan after the conquests of Alexander the Great, although small communities lived there prior to this.

13. Girnar version, issued in 256 B.C..

14. Girnar version, issued in 256 B.C.

15. Girnar version, issued in 256 B.C.

16. Bodh Gaya, the site of the Buddha's enlightenment, was known in ancient times as either Sambodhi or Vajirasana.

17. Kalsi version, issued in 256 B.C. Asoka obviously had the Mangala Sutta (Sutta Nipata 258-269) in mind when he issued this edict. The word here translated as ceremony is //mangala//.

18. Other versions substitute the following up to the end of the edict.

    It has also been said: "Generosity is good." But there is no gift or benefit like the gift of the Dhamma or benefit like the benefit of the Dhamma. There a friend, a well-wisher, a relative or a companion should encourage others thus on appropriate occasions: "This should be done, this is good, by doing this, one can attain heaven." And what greater achievement is there than this, to attain heaven?

19. Girnar version, issued in 256 B.C.

20. Girnar version, issued in 256 B.C.

21. Similar to Dhammapada 354.

22. Girnar version, issued in 256 B.C.

23. Asoka probably believed that the essentials (//saravadi//) of all religions were their ethical principles.

24. (//Ta samavayo eva sadhu//). This sentence is usually translated "Therefore concord is commendable." //Samavayo// however comes from //sam// + //ava// + //i//, "to come together."

25. Kalsi version, issued in 256 B.C. Kalinga corresponds roughly to the modern state of Orissa.

26. The Buddha pointed out that the four castes of Indian society likewise were not found among the Greeks; see Majjhima Nikaya, II:149.

27. Perhaps Asoka had in mind Dhammapada 103-104.

28. Antiochos II Theos of Syria (261-246 B.C.), Ptolemy II Philadelphos of Egypt (285-247 B.C.), Antigonos Gonatos of Macedonia (278-239 B.C.), Magas of Cyrene (300-258 B.C.) and Alexander of Epirus (272-258 B.C.).

29. Girnar version, issued in 256 B.C.

30. Dhauli version, issued in 256 B.C. These two edicts are found in two different places.

31. Dhauli version, issued in 256 B.C.

32. This is reminiscent of the Buddha's words: "Just as a mother would protect her only child even at the risk of her own life, even so, let one cultivate a boundless heart towards all beings." Sutta Nipata 149.

33. Gavimath version, issued in 257 B.C. This edict is found in twelve different places.

34. First Asoka was a lay-disciple (//upasaka//) and then he visited or literally "went to the Sangha" (//yam me samghe upeti//). Some scholars think this means that Asoka became a monk. However it probably means that he started visiting Buddhist monks more often and listening to their instructions more carefully.

35. Brahmagiri version.

36. This edict was found inscribed on a small rock near the town of Bairat and is now housed at the Asiatic Society in Calcutta. Its date is not known.

37. This sentence is the converse of a similar one in the Tipitaka: "...that which is well-spoken is the words of the Lord." Anguttara Nikaya, IV:164.

38. There is disagreement amongst scholars concerning which Pali suttas correspond to some of the text. Vinaya samukose: probably the Atthavasa Vagga, Anguttara Nikaya, 1:98-100. Aliya vasani: either the Ariyavasa Sutta, Anguttara Nikaya, V:29, or the Ariyavamsa Sutta, Anguttara Nikaya, II: 27-28. Anagata bhayani: probably the Anagata Sutta, Anguttara Nikaya, III:100. Muni gatha: Muni Sutta, Sutta Nipata 207-221. Upatisa pasine: Sariputta Sutta, Sutta Nipata 955-975. Laghulavade: Rahulavada Sutta, Majjhima Nikaya, I:421.

39. The following seven edicts are from the Delhi Topra version, the first six being issued in 243 B.C. and the seventh in 242 B.C. The first six edicts also appear on five other pillars.

40. //Cakhu dane//. The meaning is unclear. It may mean that Asoka has given "the eye of wisdom," but taking into account the context, it more likely means he has stopped blinding as a form of punishment.

41. Similar to the ideas expressed by the Buddha in Dhammapada 50 and 252.

42. The identification of many of these animals is conjectural.

43. The Ajivikas were a sect of ascetics in ancient India established by Makkhali Gosala, a contemporary of the Buddha. The Niganthas are the Jains.

44. This inscription is found on a pillar in Lumbini where the Buddha was born. It was issued in 249 B.C., probably at the time of Asoka's visit to the place.

45. Allahabad version, date of issue not known. The words in brackets are missing due to damage on the pillar, but they can be reconstructed from the three other versions of this edict.

46. The white clothes of the lay followers rather than the yellow robe of a monk or nun.

THE BUDDHIST PUBLICATION SOCIETY

The BPS is an approved charity dedicated to making known the Teaching of the Buddha, which has a vital message for people of all creeds. Founded in 1958, the BPS has published a wide variety of books and booklets covering a great range of topics. Its publications include accurate annotated translations of the Buddha's discourses, standard reference works, as well as original contemporary expositions of Buddhist thought and practice. These works present Buddhism as it truly is -- a dynamic force which has influenced receptive minds for the past 2500 years and is still as relevant today as it was when it first arose. A full list of our publications will be sent upon request with an enclosure of U.S. $1.00 or its equivalent to cover air mail postage.

[end of file]

That the True Dhamma Might Last a Long Time:

Readings Selected by King Asoka

by Thanissaro Bhikkhu

The edicts of King Asoka are a remarkable record of one of the most remarkable events in human history: One man's efforts to rule an empire with a policy based on Dhamma. Asoka's policy had three prongs: administration based on Dhamma, instruction in Dhamma for the populace, and personal practice of Dhamma by the ruler.

The edicts are direct evidence of the second prong, and for the most part present Dhamma as a series of moral principles and rational behavior that should be common to all religions. However, a few of them are addressed to Buddhists in particular, and one of them--the Bhabru Rock Edict--deals with themes that are of interest not only to historians, but also to Buddhists of all times and places. It deals with what may be done to keep the True Dhamma alive for a long time, and Asoka's recommendation is a list of passages from the Buddhist Canon which he says all Buddhists--ordained or not--should listen to and reflect on frequently. Here is the text of the edict:

"His Gracious Majesty, King of Magadha, bows down to the Sangha, and--hoping that they are free from disease and living in peace--addresses them as follows: You know well the extent of my reverence and faith in the Buddha, Dhamma and Sangha. Whatever has been said by the Buddha has of course been well-said. But may I be permitted to point out the passages of scripture I have selected that the True Dhamma might last a long time: Vinaya-samukasa, Aliya-vasani, Anagata-bhayani, Muni-gatha, Mauneya-sute, Upatisa-pasine and the Instructions to Rahula beginning with (the topic of) falsehood, as taught by the Blessed One.

Reverend Sirs, I would like the reverend bhikkhus and bhikkhunis--as

well as the laymen and laywomen--to listen to these passages frequently and to ponder on them.

For this reason, Reverend Sirs, I am having this enscribed so that they may know of my intention."

As might be imagined, this passage has given rise to a great deal of conjecture ever since it was deciphered in 1840. Not the least of the questions is precisely which passages from the Canon Asoka is referring to, or indeed if he was referring to a Canon anything like what we have today.

Scholars have spilt a fair amount of ink sparring over the answer, and have managed to reach a consensus on the identity of four of the passages: the Aliya-vasani is the Discourse on the Traditions of the Noble Ones (ariya-vamsa) (A.IV.28); the Anagata-bhayani are the four discourses on Future Dangers (A.V.77-80); the Muni-gatha is the Discourse on the Sage (Muni Sutta) in the Sutta Nipata (Sn.I.12); and the Instructions to Rahula are the Cula-Rahulovada Sutta (M.61).

The other three passages have proven more intractable. A number of scholars have favored the Nalaka Sutta as the Mauneya-sute--this, in spite of the fact that there is a Moneyya (Sagacity) Sutta in the Anguttara Nikaya (A.III.23). The Upatisa-pasine (Question of Upatissa=Sariputta) is problematic because there is no one passage of that name, and because Sariputta asks so many questions in the Canon. Some scholars have proposed the Sariputta Sutta in the Sutta Nipata, but archaeological evidence--votive tablets produced beginning with the time of Asoka, and originating in the Buddhist pilgrim sites--show that Ven. Assaji's answer to Sariputta's first question about the doctrine, the answer which sparked a vision of the Dhamma in Sariputta when he heard it, has long been regarded as the ideal epitome of the Buddha's teachings. This tradition may have connections with this very edict. Ask any knowledgeable Buddhists today what Sariputta's most famous question was, and they will in all likelihood answer with this one.

As for the Vinaya-samukase, this has sparked the most fanciful

conjectures, because the single reference to this word in the Canon is buried in a book hardly anyone reads: the Parivara (VI.4). The reference itself says nothing more than that there are four "vinaya-samukkamsa"--innate principles of the Vinaya--but the Commentary identifies them as the four Great Standards--most likely the four mentioned in the Mahavagga, dealing specifically with Vinaya, rather than the four in the Maha Parinibbana Sutta, which deal with Dhamma and Vinaya together.

This seems to settle the question of which passages Asoka was recommending, but it raises another one: Why these? And why in this order?

Perhaps the best approach to answering these questions would be to read the passages and ponder on them, as Asoka suggested. So here they are. Most of them are self-explanatory, except for the first, on the innate principles of Vinaya, and the poem on the sage, which--being a poem--occasionally makes use of imagery which might be unfamiliar to a modern reader. Thus I include in the translation of The Sage a set of notes, drawing mostly from the Commentary, but also from other parts of the Canon and works on ancient culture in general.

As for the Innate Principles of the Vinaya, the passage itself contains nothing unremarkable, but it seems so obvious on first reading that one might wonder why anyone would call attention to it. Actually, it is a fine example of the Buddha's farsightedness in setting up a system of teachings and rules. There are bound to be a number of things not touched on in the rules, and this number is bound to grow as culture and technology change. An unenlightened approach to these changes would say either that anything not allowed is forbidden, or that anything not explicitly forbidden is allowed. The Buddha, typically, sets forth a system of interpretation which avoids both of these extremes, and which helps to ensure the long life of his doctrine and discipline by setting guidelines for expanding them to cover new objects and situations as they arise.

The Innate Principles of the Vinaya

Now at that time uncertainty arose in the monks with regard to this and that item: "Now what is allowed by the Blessed One? What is not allowed?" They told this matter to the Blessed One, (who said):

"Bhikkhus, whatever I have not objected to, saying, 'This is not allowable,' if it fits in with what is not allowable, if it goes against what is allowable, this is not allowable for you.

"Whatever I have not objected to, saying, 'This is not allowable,' if it fits in with what is allowable, if it goes against what is not allowable, this is allowable for you.

"And whatever I have not permitted, saying, 'This is allowable,' if it fits in with what is not allowable, if it goes against what is allowable, this is not allowable for you.

'This is allowable,' if it fits in with what is allowable, if it goes against what is not allowable, this is allowable for you."

Mv.VI.40.1

The Traditions of the Noble Ones

These four traditions of the Noble Ones--original, long-standing, traditional, ancient, unadulterated, unadulterated from the beginning--are not open to suspicion, will never be open to suspicion, and are unfaulted by knowledgeable contemplatives and priests. What four?

There is the case of a monk content with any old robe cloth at all. He speaks in praise of being content with any old robe cloth at all. He does not, for the sake of robe cloth, do anything unseemly or inappropriate. Not getting cloth, he is not agitated. Getting cloth,

he uses it not tied to it, uninfatuated, guiltless, seeing the drawbacks (of attachment to it) and discerning the escape from them. He does not, on account of his contentment with any old robe cloth at all, exalt himself or disparage others. In this he is skillful, energetic, clearly aware and mindful. This, monks, is said to be a monk standing firm in the ancient, original traditions of the Noble Ones.

Furthermore, the monk is content with any old almsfood at all. He speaks in praise of being content with any old almsfood at all. He does not, for the sake of almsfood, do anything unseemly or inappropriate. Not getting almsfood, he is not agitated. Getting almsfood, he uses it not tied to it, uninfatuated, guiltless, seeing the drawbacks (of attachment to it) and discerning the escape from them. He does not, on account of his contentment with any old almsfood at all, exalt himself or disparage others. In this he is skillful, energetic, clearly aware and mindful. This, monks, is said to be a monk standing firm in the ancient, original traditions of the Noble Ones.

Furthermore, the monk is content with any old lodging at all. He speaks in praise of being content with any old lodging at all. He does not, for the sake of lodging, do anything unseemly or inappropriate. Not getting lodging, he is not agitated. Getting lodging, he uses it not tied to it, uninfatuated, guiltless, seeing the drawbacks (of attachment to it) and discerning the escape from them. He does not, on account of his contentment with any old lodging at all, exalt himself or disparage others. In this he is skillful, energetic, clearly aware and mindful. This, monks, is said to be a monk standing firm in the ancient, original traditions of the Noble Ones.

Furthermore, the monk finds pleasure and delight in developing (good mental qualities), finds pleasure and delight in abandoning (bad mental qualities). He does not, on account of his pleasure and delight in developing and abandoning, exalt himself or disparage others. In this he is skillful, energetic, clearly aware and mindful. This, monks, is said to be a monk standing firm in the ancient, original traditions of the Noble Ones.

These are the four traditions of the Noble Ones--original, long-standing, traditional, ancient, unadulterated, unadulterated from the beginning--which are not open to suspicion, will never be open to suspicion, and are unfaulted by knowledgeable contemplatives and priests.

And furthermore, a monk endowed with these four traditions of the Noble Ones, if he lives in the east, conquers displeasure, and is not conquered by displeasure. If he lives in the west... the north... the south, he conquers displeasure, and is not conquered by displeasure. Why is that? Because the wise one endures both pleasure and displeasure.

This is what the Blessed One said. Having said this, he said further:

Displeasure does not conquer the wise one.
    Displeasure does not suppress him.
He conquers displeasure
    because he endures it.

Having cast away all deeds:
    Who could obstruct him?
Like an ornament of finest gold:
    Who is fit to find fault with him?
Even the Devas praise him,
    Even by Brahma is he praised.

    A.IV.28

Future Dangers: I

Monks, these five future dangers are just enough, when considered, for a monk living in the wilderness--uncomplacent, earnest and resolute--to live for the attaining of the as-yet-unattained, the

reaching of the as-yet-unreached, the realization of the as-yet-unrealized. What five?

There is the case of the monk living in the wilderness who reminds himself of this: I am now living alone in the wilderness. While I am living alone in the wilderness a snake might bite me, a scorpion might sting me, a centipede might bite me. That would be how my death would come about. That would be an obstruction for me. So let me make an effort for the attainment of the as-yet-unattained, the reaching of the as-yet-unreached, the realization of the as-yet-unrealized.

This is the first future danger which is just enough, when considered, for a monk living in the wilderness--uncomplacent, earnest and resolute--to live for the attaining of the as-yet-unattained, the reaching of the as-yet-unreached, the realization of the as-yet-unrealized.

Furthermore, the monk living in the wilderness reminds himself of this: I am now living alone in the wilderness. While I am living alone in the wilderness, stumbling, I might fall; my food, digested, might trouble me; my bile might be provoked, my phlegm... piercing wind forces (in the body) might be provoked. That would be how my death would come about. That would be an obstruction for me. So let me make an effort for the attainment of the as-yet-unattained, the reaching of the as-yet-unreached, the realization of the as-yet-unrealized.

This is the second future danger which is just enough, when considered, for a monk living in the wilderness--uncomplacent, earnest and resolute--to live for the attaining of the as-yet-unattained, the reaching of the as-yet-unreached, the realization of the as-yet-unrealized.

Furthermore, the monk living in the wilderness reminds himself of this: I am now living alone in the wilderness. While I am living alone in the wilderness, I might meet up with vicious beasts: a lion or a tiger or a leopard or a bear or a hyena. They might take my life. That would be how my death would come about. That would be an obstruction for me. So let me make an effort for the attainment of the

as-yet-unattained, the reaching of the as-yet-unreached, the realization of the as-yet-unrealized.

This is the third future danger which is just enough, when considered, for a monk living in the wilderness--uncomplacent, earnest and resolute--to live for the attaining of the as-yet-unattained, the reaching of the as-yet-unreached, the realization of the as-yet-unrealized.

Furthermore, the monk living in the wilderness reminds himself of this: I am now living alone in the wilderness. While I am living alone in the wilderness, I might meet up with youths on their way to committing a crime or on their way back. They might take my life. That would be how my death would come about. That would be an obstruction for me. So let me make an effort for the attainment of the as-yet-unattained, the reaching of the as-yet-unreached, the realization of the as-yet-unrealized.

This is the fourth future danger which is just enough, when considered, for a monk living in the wilderness--uncomplacent, earnest and resolute--to live for the attaining of the as-yet-unattained, the reaching of the as-yet-unreached, the realization of the as-yet-unrealized.

Furthermore, the monk living in the wilderness reminds himself of this: I am now living alone in the wilderness. And in the wilderness are vicious non-human beings (spirits). They might take my life. That would be how my death would come about. That would be an obstruction for me. Let me then make an effort for the attainment of the as-yet-unattained, the reaching of the as-yet-unreached, the realization of the as-yet-unrealized.

This is the fifth future danger which is just enough, when considered, for a monk living in the wilderness--uncomplacent, earnest and resolute--to live for the attaining of the as-yet-unattained, the reaching of the as-yet-unreached, the realization of the as-yet-unrealized.

These are the five future dangers which are just enough, when considered, for a monk living in the wilderness--uncomplacent, earnest and resolute--to live for the attaining of the as-yet-unattained, the reaching of the as-yet-unreached, the realization of the as-yet-unrealized.

A.V.77

Future Dangers: II

Monks, these five future dangers are just enough, when considered, for a monk--uncomplacent, earnest and resolute--to live for the attaining of the as-yet-unattained, the reaching of the as-yet-unreached, the realization of the as-yet-unrealized. What five?

There is the case of the monk who reminds himself of this: At present I am young, black-haired, endowed with the blessings of youth in the first stage of life. The time will come, though, when this body is beset by old age. When one is overcome with old age and decay, it is not easy to pay attention to the Buddha's teachings. It is not easy to reside in isolated forest or wilderness dwellings. Before this unwelcome, disagreeable, displeasing thing happens, let me first make an effort for the attaining of the as-yet-unattained, the reaching of the as-yet-unreached, the realization of the as-yet-unrealized, so that--endowed with that Dhamma--I will live in peace even when old.

This is the first future danger which is just enough, when considered, for a monk--uncomplacent, earnest and resolute--to live for the attaining of the as-yet-unattained, the reaching of the as-yet-unreached, the realization of the as-yet-unrealized.

Furthermore, the monk reminds himself of this: At present I am free from illness and discomfort, endowed with good digestion: not too cold, not too hot, of medium strength and tolerance. The time will come, though, when this body is beset with illness. When one is overcome with illness, it is not easy to pay attention to the Buddha's

teachings. It is not easy to reside in isolated forest or wilderness dwellings. Before this unwelcome, disagreeable, displeasing thing happens, let me first make an effort for the attaining of the as-yet-unattained, the reaching of the as-yet-unreached, the realization of the as-yet-unrealized, so that--endowed with that Dhamma--I will live in peace even when ill.

This is the second future danger which is just enough, when considered, for a monk--uncomplacent, earnest and resolute--to live for the attaining of the as-yet-unattained, the reaching of the as-yet-unreached, the realization of the as-yet-unrealized.

Furthermore, the monk reminds himself of this: At present food is plentiful, alms are easy to come by. It is easy to maintain oneself by gleanings and patronage. The time will come, though, when there is famine: Food is scarce, alms are hard to come by, and it is not easy to maintain oneself by gleanings and patronage. When there is famine, people will congregate where food is plentiful. There they will live packed and crowded together. When one is living packed and crowded together, it is not easy to pay attention to the Buddha's teachings. It is not easy to reside in isolated forest or wilderness dwellings. Before this unwelcome, disagreeable, displeasing thing happens, let me first make an effort for the attaining of the as-yet-unattained, the reaching of the as-yet-unreached, the realization of the as-yet-unrealized, so that--endowed with that Dhamma--I will live in peace even when there is famine.

This is the third future danger which is just enough, when considered, for a monk--uncomplacent, earnest and resolute--to live for the attaining of the as-yet-unattained, the reaching of the as-yet-unreached, the realization of the as-yet-unrealized.

Furthermore, the monk reminds himself of this: At present people are in harmony, on friendly terms, without quarreling, like milk mixed with water, viewing one another with eyes of affection. The time will come, though, when there is danger and an invasion of savage tribes. Taking power, they will surround the countryside. When there is danger, people will congregate where it is safe. There they will live

packed and crowded together. When one is living packed and crowded together, it is not easy to pay attention to the Buddha's teachings. It is not easy to reside in isolated forest or wilderness dwellings. Before this unwelcome, disagreeable, displeasing thing happens, let me first make an effort for the attaining of the as-yet-unattained, the reaching of the as-yet-unreached, the realization of the as-yet-unrealized, so that--endowed with that Dhamma--I will live in peace even when there is danger.

This is the fourth future danger which is just enough, when considered, for a monk--uncomplacent, earnest and resolute--to live for the attaining of the as-yet-unattained, the reaching of the as-yet-unreached, the realization of the as-yet-unrealized.

Furthermore, the monk reminds himself of this: At present the Sangha--in harmony, on friendly terms, without quarreling--lives in comfort with a single recitation. The time will come, though, when the Sangha splits. When the Sangha is split it is not easy to pay attention to the Buddha's teachings. It is not easy to reside in isolated forest or wilderness dwellings. Before this unwelcome, disagreeable, displeasing thing happens, let me first make an effort for the attaining of the as-yet-unattained, the reaching of the as-yet-unreached, the realization of the as-yet-unrealized, so that--endowed with that Dhamma--I will live in peace even when the Sangha is split.

This is the fifth future danger which is just enough, when considered, for a monk--uncomplacent, earnest and resolute--to live for the attaining of the as-yet-unattained, the reaching of the as-yet-unreached, the realization of the as-yet-unrealized.

These are the five future dangers which are just enough, when considered, for a monk--uncomplacent, earnest and resolute--to live for the attaining of the as-yet-unattained, the reaching of the as-yet-unreached, the realization of the as-yet-unrealized.

A.V.78

Future Dangers: III

Monks, these five future dangers, unarisen at present, will arise in the future. Be alert to them, and being alert, work to get rid of them. What five?

There will be, in the course of the future, monks undeveloped in bodily conduct, undeveloped in virtue, undeveloped in mind, undeveloped in discernment. They--being undeveloped in bodily conduct, undeveloped in virtue, undeveloped in mind, undeveloped in discernment--will give full ordination to others, and will not be able to discipline them in heightened virtue, heightened mind, heightened discernment. These too will then be undeveloped in bodily conduct... virtue... mind... discernment. They--being undeveloped in bodily conduct... virtue... mind... discernment--will give full ordination to still others and will not be able to discipline them in heightened virtue, heightened mind, heightened discernment. These too will then be undeveloped in bodily conduct... virtue... mind... discernment. Thus from corrupt Dhamma comes corrupt discipline; from corrupt discipline, corrupt Dhamma.

This, monks, is the first future danger, unarisen at present, which will arise in the future. Be alert to it, and being alert, work to get rid of it.

And again, there will be in the course of the future monks undeveloped in bodily conduct, undeveloped in virtue, undeveloped in mind, undeveloped in discernment. They--being undeveloped in bodily conduct, undeveloped in virtue, undeveloped in mind, undeveloped in discernment--will take on others as students, and will not be able to discipline them in heightened virtue, heightened mind, heightened discernment. These too will then be undeveloped in bodily conduct... virtue... mind... discernment. They--being undeveloped in bodily conduct... virtue... mind... discernment--will take on still others as

students and will not be able to discipline them in heightened virtue, heightened mind, heightened discernment. These too will then be undeveloped in bodily conduct... virtue... mind... discernment. Thus from corrupt Dhamma comes corrupt discipline; from corrupt discipline, corrupt Dhamma.

This, monks, is the second future danger, unarisen at present, which will arise in the future. Be alert to it, and being alert, work to get rid of it.

And again, there will be in the course of the future monks undeveloped in bodily conduct... virtue... mind... discernment. They--being undeveloped in bodily conduct... virtue... mind... discernment--when giving a talk on higher Dhamma, or a talk composed of questions and answers, will fall into dark mental states without being aware of it. Thus from corrupt Dhamma comes corrupt discipline; from corrupt discipline, corrupt Dhamma.

This, monks, is the third future danger, unarisen at present, which will arise in the future. Be alert to it, and being alert, work to get rid of it.

And again, there will be in the course of the future monks undeveloped in bodily conduct... virtue... mind... discernment. They--being undeveloped in bodily conduct... virtue.... mind... discernment--will not listen when discourses which are words of the Tathagata--deep profound, transcendent, connected with the Void--are being recited. They will not lend ear, will not set their hearts on knowing them, will not regard these teachings as worth grasping or mastering. But they will listen when discourses which are literary works--the works of poets, elegant in sound, elegant in rhetoric, the work of outsiders, words of disciples--are recited. They will lend ear and set their hearts on knowing them. They will regard these teachings as worth grasping and mastering. Thus from corrupt Dhamma comes corrupt discipline; from corrupt discipline, corrupt Dhamma.

This, monks, is the fourth future danger, unarisen at present, which will arise in the future. Be alert to it, and being alert, work to get

rid of it.

And again, there will be in the course of the future monks undeveloped in bodily conduct... virtue... mind... discernment. They--being undeveloped in bodily conduct... virtue... mind... discernment--will become elders living in luxury, lethargic, foremost in falling back, shirking the duties of solitude. They will not make an effort for the attaining of the as-yet-unattained, the reaching of the as-yet-unreached, the realization of the as-yet-unrealized. They will become an example for later generations, who will become luxurious in their living, lethargic, foremost in falling back, shirking the duties of solitude, and who will not make an effort for the attaining of the as-yet-unattained, the reaching of the as-yet-unreached, the realization of the as-yet-unrealized. Thus from corrupt Dhamma comes corrupt discipline; from corrupt discipline, corrupt Dhamma.

This, monks, is the fifth future danger, unarisen at present, which will arise in the future. Be alert to it, and being alert, work to get rid of it.

These, monks, are the five future dangers, unarisen at present, which will arise in the future. Be alert to them, and being alert, work to get rid of them.

A.V.79

Future Dangers: IV

Monks, these five future dangers, unarisen at present, will arise in the future. Be alert to them, and being alert, work to get rid of them. What five?

There will be, in the course of the future, monks desirous of fine robes. They, desirous of fine robes, will neglect the practice of wearing cast-off cloth; will neglect isolated forest and wilderness dwellings; will move to towns, cities and royal capitals and take up

residence there. For the sake of a robe they will do many kinds of unseemly, inappropriate things.

This, monks, is the first future danger, unarisen at present, which will arise in the future. Be alert to it, and being alert, work to get rid of it.

Furthermore, there will be in the course of the future, monks desirous of fine food. They, desirous of fine food, will neglect the practice of going for alms; will neglect isolated forest and wilderness dwellings; will move to towns, cities and royal capitals and take up residence there, searching out the tip-top tastes with the tip of the tongue. For the sake of food they will do many kinds of unseemly, inappropriate things.

This, monks, is the second future danger, unarisen at present, which will arise in the future. Be alert to it, and being alert, work to get rid of it.

Furthermore, there will be in the course of the future, monks desirous of fine lodgings. They, desirous of fine food, will neglect the practice of living in the wilds; will neglect isolated forest and wilderness dwellings; will move to towns, cities and royal capitals and take up residence there. For the sake of lodgings they will do many kinds of unseemly, inappropriate things.

This, monks, is the third future danger, unarisen at present, which will arise in the future. Be alert to it, and being alert, work to get rid of it.

Furthermore, there will be in the course of the future, monks who will live in close association with nuns, female probationers and female novices. As they interact with nuns, female probationers and female novices, it can be expected either that they will lead the holy life dissatisfied, or will fall into one of the grosser offenses, leaving the training, returning to a lower way of life.

This, monks, is the fourth future danger, unarisen at present, which

will arise in the future. Be alert to it, and being alert, work to get rid of it.

Furthermore, there will be in the course of the future, monks who will live in close association with monastery attendants and novices. As they interact with monastery attendants and novices, it can be expected that they will live intent on storing up all kinds of possessions, and will stake out crops and fields. This is the fifth future danger...

This, monks, is the fifth future danger, unarisen at present, which will arise in the future. Be alert to it, and being alert, work to get rid of it.

These, monks, are the five future dangers, unarisen at present, which will arise in the future. Be alert to them, and being alert, work to get rid of them.

A.V.80

The Sage

Danger is born from intimacy, [1]
Society gives birth to dust. [2]
Free from intimacy.
Free from society:
Such is the vision of the sage.

Who, destroying what's born, would not plant again
Or nourish what will arise:
They call him the wandering, singular sage.
He has seen the state of peace.

Considering the ground,
Crushing the seed,
He would not nourish the sap[3]

--Truly a sage--
Seer of the ending of birth:
Abandoning conjecture, he cannot be classified.

Knowing all dwellings,[4]
Not longing for any one anywhere
--Truly a sage--
With no coveting, without greed,
He does not build,[5] for he has gone beyond.

* * *

Overcoming all
Knowing all,
Wise.
With regard to all things: unsmeared.

Abandoning all,
in the ending of craving,
released:
The wise call him a sage.

Strong in discernment,
Virtuous in his practices,
composed,
delighting in meditation,
mindful,
Freed from attachments,
no barrenness :: no effluents:[6]
The wise call him a sage.

The wandering solitary sage,
uncomplacent, unshaken by praise or blame
Like the lion: not starting at sounds.
Like the wind: not caught in the net.
Like the lotus: not smeared by the water.
Leader of others, by others unled:
The wise call him a sage.

Like the pillar at a bathing ford,[7]
    when others speak in extremes.
He, without passion, his senses well-composed:
The wise call him a sage.

Truly poised, straight as a shuttle, [8]
    he loathes evil actions.
Pondering what is on-pitch and off: [9]
The wise call him a sage.

Self-restrained, he does no evil.
Young and middle-aged, the sage self-controlled,
never angered, he angers none:
The wise call him a sage.

From the best
    the middling
        the leftovers
he receives alms.
Sustaining himself on what others give.
    Neither flattering
    nor speaking disparagement:
The wise call him a sage.

The wandering sage
    not delighting in sex,
in youth bound by no one,
not delighting in intoxication [10]
        complacency
    totally freed:
The wise call him a sage.

Knowing the world
seeing the highest goal
crossing the ocean, [11], the flood [12]
    --Such-- [13]
His chains broken

Unbound
Without effluent:
The wise call him a sage.

* * *

These two are different,
they dwell far apart:
The householder supporting a wife
and the unselfish one, of good practices.
Slaying other beings, the householder
is unrestrained.
Constantly the sage protects other beings,
is controlled.

As the crested, blue-necked peacock, when flying,
never matches the wild goose in speed:
Even so the householder never keeps up with the monk,
the sage secluded,
meditating
in the forest.

Sn.I.12

Sagacity

Monks, there are these three forms of sagacity. What three? Bodily sagacity, verbal sagacity and mental sagacity.

And what is bodily sagacity? There is the case where a monk abstains from taking life, abstains from theft, abstains from unchastity. This is called bodily sagacity.

And what is verbal sagacity? There is the case where a monk abstains from lying, abstains from divisive tale-bearing, abstains from harsh language, abstains from idle chatter. This is called verbal sagacity.

And what is mental sagacity? There is the case where a monk who--with the wasting away of the mental effluents--remains in the effluentless release of awareness and release of discernment, having known and made them manifest for himself right in the present. This is called mental sagacity.

These, monks, are the three forms of sagacity.

A sage in body, a sage in speech,
A sage in mind, without effluent:
A sage consummate in sagacity
is said to have abandoned
everything.

A.III.23

Sariputta's (Upatissa's) Question

Now at that time the wanderer Sanjaya was residing in Rajagaha with a large company of wanderers--250 in all. And at that time Sariputta and Moggallana were practicing the holy life under Sanjaya. They had made this agreement: Whoever attains the Deathless first will inform the other.

Then Ven. Assaji, arising early in the morning, taking his robe and bowl, entered Rajagaha for alms: Gracious in the way he approached and departed, looked forward and behind, drew in and stretched out his arm; his eyes downcast, his every movement consummate. Sariputta the wanderer saw Ven. Assaji going for alms in Rajagaha: gracious... his eyes downcast, his every movement consummate. On seeing him, the thought occurred to him: "Surely, of those in this world who are arahants or have entered the path to arahantship, this is one. What if I were to approach him and question him: 'On whose account have you gone forth? Who is your teacher? In whose Dhamma do you delight?'"

But then the thought occurred to Sariputta the wanderer: "This is the wrong time to question him. He is going for alms in the town. What if I were to follow behind this monk who has found the path for those who seek it?"

Then Ven. Assaji having gone for alms in Rajagaha, left, taking the alms he had received. Sariputta the wanderer approached him and on arrival, having exchanged friendly greetings and engaged in polite conversation, stood to one side. As he stood there he said, "Your faculties are bright, my friend, your complexion pure and clear. On whose account have you gone forth? Who is your teacher? In whose Dhamma do you delight?"

"There is, my friend, the Great Contemplative, a son of the Sakyans, gone forth from a Sakyan family. I have gone forth on account of that Blessed One. That Blessed One is my teacher. It is in that Blessed One's Dhamma that I delight."

"But what is your teacher's teaching? What does he proclaim?"

"I am new, my friend, not long gone forth, only recently come to this doctrine and discipline. I cannot explain the doctrine in detail, but I can give you the gist in brief."

Then Sariputta the wanderer spoke thus to the Ven. Assaji:

"Speak a little or a lot,
but tell me just the gist.
The gist is what I want
What use is a lot of rhetoric?"

Then Ven. Assaji gave this Dhamma exposition to Sariputta the Wanderer:

"Whatever phenomena arise from cause:
Their cause
and their cessation.
Such is the teaching of the Tathagata

the Great Contemplative."

Then to Sariputta the Wanderer, as he heard this Dhamma exposition , there arose the dustless, stainless Dhamma eye: Whatever is subject to origination is all subject to cessation.

"Even if just this is the Dhamma,
you have penetrated
to the Sorrowless (asoka) State
unseen, overlooked (by us)
for many myriads of aeons."

Then Sariputta the wanderer went to where Moggallana the wanderer was staying. Moggallana the wanderer saw him coming from afar, and on seeing him said, "Your faculties are bright, my friend; your complexion pure and clear. Could it by that you have attained the Deathless?"

"Yes, my friend, I have attained the Deathless. "

"But how did you, friend, attain the Deathless?"

"Just now, friend, I saw Ven. Assaji going for alms in Rajagaha: gracious in the way he approached and departed, looked forward and behind, drew in and stretched out his arm; his eyes downcast, his every movement consummate. On seeing him, the thought occurred to me: 'Surely, of those in this world who are arahants or have entered the path to arahantship, this is one. What if I were to approach him and question him: "On whose account have you gone forth? Who is your teacher? In whose Dhamma do you delight?"'

"But then the thought occurred to me: 'This is the wrong time to question him. He is going for alms in the town. What if I were to follow behind this monk who has found the path for those who seek it?'

"Then Ven. Assaji having gone for alms in Rajagaha, left, taking the alms he had received. I approached him and on arrival, having exchanged friendly greetings and engaged in polite conversation, stood

to one side. As I stood there I said, 'Your faculties are bright, my friend, your complexion pure and clear. On whose account have you gone forth? Who is your teacher? In whose Dhamma do you delight?'

"'There is, my friend, the Great Contemplative, a son of the Sakyans, gone forth from a Sakyan family. I have gone forth on account of that Blessed One. That Blessed One is my teacher. It is in that Blessed One's Dhamma that I delight.'

"'But what is your teacher's teaching? What does he proclaim?'

"'I am new, my friend, not long gone forth, only recently come to this doctrine and discipline. I cannot explain the doctrine to you in detail, but I can give you the gist in brief.'

"'Speak a little or a lot,
but tell me just the gist.
The gist is what I want
What use is a lot of rhetoric?'

"Then Ven. Assaji gave me this Dhamma exposition:

"'Whatever phenomena arise from cause:
Their cause
and their cessation.
Such is the teaching of the Tathagata
the Great Contemplative.'"

Then to Moggallana the Wanderer, as he heard this Dhamma exposition, there arose the dustless, stainless Dhamma eye: Whatever is subject to origination is all subject to cessation.

"Even if just this is the Dhamma,
you have penetrated
to the Sorrowless (asoka) State
unseen, overlooked (by us)
for many myriads of aeons."

Mv.I.23.5

Instructions to Rahula

I have heard that at one time the Blessed One was staying at Rajagaha, at the Bamboo Grove, the Squirrels' Feeding Ground.

At that time Ven. Rahula [14] was staying at the Mango Stone. Then the Blessed One, arising from his seclusion in the late afternoon, went to where Ven. Rahula was staying at the Mango Stone. Ven. Rahula saw him coming from afar, and on seeing him set out a seat and water for washing the feet. The Blessed One sat down on the seat set out, and having sat down, washed his feet. Ven. Rahula, bowing down to the Blessed One, sat down to one side.

Then the Blessed One, having left a little bit of the remaining water in the water dipper, said to Ven. Rahula, "Rahula, do you see this little bit of remaining water left in the water dipper?"

"Yes sir."

"That's how little of a contemplative15 there is in anyone who feels no shame at telling a deliberate lie."

Having tossed away the little bit of remaining water, the Blessed One said to Ven. Rahula, "Rahula, do you see how this little bit of remaining water is tossed away?"

"Yes, sir."

"Whatever there is of a contemplative in anyone who feels no shame at telling a deliberate lie is tossed away just like that.

Having turned the water dipper upside down, the Blessed One said to Ven. Rahula, "Rahula, do you see how this water dipper is turned

upside down?"

"Yes, sir."

"Whatever there is of a contemplative in anyone who feels no shame at telling a deliberate lie is turned upside down just like that."

Having turned the water dipper right-side up, the Blessed One said to Ven. Rahula, "Rahula, do you see how empty and hollow this water dipper is?"

"Yes, sir."

"Whatever there is of a contemplative in anyone who feels no shame at telling a deliberate lie is empty and hollow just like that.

"Rahula, it's like a royal elephant: immense, pedigreed, accustomed to battles, its tusks like chariot poles. Having gone into battle, it uses its forefeet and hindfeet, its forequarters and hindquarters, its head and ears and tusks and tail, but will simply hold back its trunk. The elephant trainer notices that and thinks, 'This royal elephant has not given up its life to the king.' But when the royal elephant... having gone into battle uses its forefeet and hindfeet, its forequarters and hindquarters, its head and ears and tusks and tail and his trunk, the trainer notices that and thinks, 'This royal elephant has given up its life to the king. There is nothing it will not do.'

"The same with anyone who feels no shame in telling a deliberate lie: There is no evil, I tell you, he will not do. Thus, Rahula, you should train yourself, 'I will not tell a deliberate lie even in jest.'

"How do you construe this, Rahula: What is a mirror for?"

"For reflection, sir."

"In the same way, Rahula, bodily acts, verbal acts and mental acts are to be done with repeated reflection.

"Whenever you want to perform a bodily act, you should reflect on it: 'This bodily act I want to perform--would it lead to self-affliction, to the affliction of others or to both? Is it an unwise bodily act, with painful consequences, painful results?' If, on reflection, you know that it would lead to self-affliction, affliction to others or both; it would be an unwise bodily act with painful consequences, painful results, then any bodily act of that sort is absolutely unfit for you to do. But if on reflection you know that it would not cause affliction... it would be a wise bodily action with happy consequences, happy results, then any bodily act of that sort is fit for you to do.

"While you are performing a bodily act, you should reflect on it: 'This bodily act I am doing--is it leading to self-affliction, to the affliction of others or to both? Is it an unwise bodily act, with painful consequences, painful results?' If, on reflection, you know that it is leading to self-affliction, affliction to others or both... you should give it up. But if on reflection you know that it is not... you may continue with it.

"Having performed a bodily act, you should reflect on it... If, on reflection, you know that it led to self-affliction, affliction to others or both; it was an unwise bodily act with painful consequences, painful results, then you should confess it, reveal it, lay it open to the Teacher or to a knowledgeable companion in the holy life. Having confessed it... you should exercise restraint in the future. But if on reflection you know that it did not lead to affliction... it was a wise bodily action with happy consequences, happy results, then you should stay mentally refreshed and joyful, training day and night in wise mental qualities.

"Whenever you want to perform a verbal act, you should reflect on it: 'This verbal act I want to perform--would it lead to self-affliction, to the affliction of others or to both? Is it an unwise verbal act, with painful consequences, painful results?' If, on reflection, you know that it would lead to self-affliction, affliction to others or both; it would be an unwise verbal act with painful consequences,

painful results, then any verbal act of that sort is absolutely unfit for you to do. But if on reflection you know that it would not cause affliction... it would be a wise verbal action with happy consequences, happy results, then any verbal act of that sort is fit for you to do.

"While you are performing a verbal act, you should reflect on it: 'This verbal act I am doing--is it leading to self-affliction, to the affliction of others or to both? Is it an unwise verbal act, with painful consequences, painful results?' If, on reflection, you know that it is leading to self-affliction, affliction to others or both... you should give it up. But if on reflection you know that it is not... you may continue with it.

"Having performed a verbal act, you should reflect on it... If, on reflection, you know that it led to self-affliction, affliction to others or both; it was an unwise verbal act with painful consequences, painful results, then you should confess it, reveal it, lay it open to the Teacher or to a knowledgeable companion in the holy life. Having confessed it... you should exercise restraint in the future. But if on reflection you know that it did not lead to affliction... it was a wise verbal action with happy consequences, happy results, then you should stay mentally refreshed and joyful, training day and night in wise mental qualities.

"Whenever you want to perform a mental act, you should reflect on it: 'This mental act I want to perform--would it lead to self-affliction, to the affliction of others or to both? Is it an unwise mental act, with painful consequences, painful results?' If, on reflection, you know that it would lead to self-affliction, affliction to others or both; it would be an unwise mental act with painful consequences, painful results, then any mental act of that sort is absolutely unfit for you to do. But if on reflection you know that it would not cause affliction... it would be a wise mental action with happy consequences, happy results, then any mental act of that sort is fit for you to do.

"While you are performing a mental act, you should reflect on it: 'This mental act I am doing--is it leading to self-affliction, to the affliction of others or to both? Is it an unwise mental act, with painful consequences, painful results?' If, on reflection, you know that it is leading to self-affliction, affliction to others or both... you should give it up. But if on reflection you know that it is not... you may continue with it.

"Having performed a mental act, you should reflect on it... If, on reflection, you know that it led to self-affliction, affliction to others or both; it was an unwise mental act with painful consequences, painful results, then you should feel distressed, ashamed and disgusted with it. Feeling distressed... you should exercise restraint in the future. But if on reflection you know that it did not lead to affliction... it was a wise mental action with happy consequences, happy results, then you should stay mentally refreshed and joyful, training day and night in wise mental qualities.

"Rahula, all those priests and contemplatives in the course of the past who purified their bodily acts, verbal acts and mental acts, did it through repeated reflection on their bodily acts, verbal acts and mental acts in just this way.

"All those priests and contemplatives in the course of the future who will purify their bodily acts, verbal acts and mental acts, will do it through repeated reflection on their bodily acts, verbal acts and mental acts in just this way.

"All those priests and contemplatives at present who purify their bodily acts, verbal acts and mental acts, do it through repeated reflection on their bodily acts, verbal acts and mental acts in just this way.

"Therefore, Rahula, you should train yourself: 'I will purify my bodily acts through repeated reflection. I will purify my verbal acts through repeated reflection. I will purify my mental acts through repeated reflection.' Thus you should train yourself."

That is what the Blessed One said. Pleased, Ven. Rahula delighted in the Blessed One's words.

M.61

* * * *

WHETHER King Asoka selected these texts on his own, or had the advice of his mentor, Ven. Moggaliputta-tissa, no one knows. Still it is possible to derive from them a conception of Dhamma of which Asoka approved, whether or not it originated with him.

One of the main points of this selection is that Dhamma is a quality of a person, rather than of doctrines or ideas. The central passage in the selection, and its only extended poem--The Sage--paints an idealized picture of the Dhamma as embodied in the deeds, words and attitudes of the person who practices it. Only if the Dhamma finds concrete expression in people's lives will it last long.

The selection also shows something of the educational strategy Asoka might have had his Dhamma officials use in teaching his populace--Buddhist and non-Buddhist--to make the Dhamma a reality in their lives. The texts are not listed in random order. Instead, they follow a pattern to impress on their listeners first that the ideals of the Dhamma are timeless and well-tested, and that there is a need to realize them as quickly as possible. Then they analyze the ideal, present a picture of it in action, and end with the basic principles for putting it into practice.

The title of the first passage--the Vinaya samukase--is explained in the Commentary as follows: Samukase means that the principles are innately true, established of their own accord. Whether or not a Buddha arises to point them out, they are true in and of themselves.

The second passage, The Traditions of the Noble Ones, brings in the perspective of time which is to provide a recurring theme throughout Asoka's selections. It looks back to the past to show how venerable, time-tested and pure the traditions of the Dhamma are. It plays on the notion of the traditions of a noble family--unadulterated, not open to criticism or suspicion--which were so important in ancient India. It even plays on words: The traditions of a family were supposed to enable those who followed them to conquer their enemies (ari), while the noble traditions taught by the Buddha enable one to overcome one's true enemy, displeasure (arati) in the mind.

Turning from the past to look at the future, the third set of selections--the four discourses on future dangers--presents a warning. The practice of the Dhamma should not be put off to a later date, because there is no certainty that the future will provide any opportunities for practice. First, there are the dangers of death, ageing, illness, famine and social turmoil in one's own life. Secondly, there are the dangers of degeneracy in the religion, when those who are supposed to practice it ignore the noble traditions and teachings, and instead do many unseemly, inappropriate things for their material comfort. The point of this set of passages, of course, is to give a sense of urgency to one's practice, so that one will make the effort take advantage of the teachings while one can.

The Sage, taking up the theme of danger, goes on to present an ideal of inner safety in the present tense, an ideal already embodied in the lives of those who have practiced the religion in full. It shows the actions and attitudes of one who finds his happiness not in relationships--and the home-building and food-raising they entail (all of which in Buddhism are viewed as symbolic of the round of death and rebirth)--but instead in the peace which comes in living a solitary life, subsisting on whatever food one may receive as alms, free to meditate in the wilderness.

The next passage--Sagacity--analyses this ideal into three qualities of body, speech and mind; and the sixth passage shows the ideal in action: Ven. Assaji, simply by the graciousness of his manner, inspires Sariputta the wanderer to follow him; and with a few

well-chosen words, he enables Sariputta to gain a glimpse of the Deathless. This is thus no empty ideal.

This passage also contains what has long been recognized as the most succinct expression of the Four Noble Truths--suffering, its cause, its cessation and the path to its cessation--just as the discourse on Sagacity contains one of the most succinct expressions of the goal of training one's actions in body, speech and mind.

The final passage shows how this goal may be brought about, focusing on the development of two qualities--truthfulness and constant reflection--which underlie every stage of the practice. Although the earlier passages focus on the monk as the ideal, this one shows that the practice builds on qualities that anyone--man, woman or child--may develop within. It also ends with a return to the theme of time, and the timelessness of the Dhamma: Whoever in the past, future or present who develops purity--or sagacity--in thought, word or deed, will have to do it in this way, and this way only. There is no other.

It is possible to search in Asoka's selection for passages which may have had personal meaning for him--the reference to the Deathless as the Sorrowless (asoka) state; the image of the peacock, the emblem of his dynasty; the image of the elephant who has given its life up to the king--but he himself would probably have preferred that Buddhists reflect on these selections to see what passages have meaning for them. The fact that the Dhamma is alive today is due in no small measure to his efforts. Buddhists today can carry on his work by doing as he asked: Reading and reflecting often on these selections, and consistently applying the principles of truthfulness and self-examination to their lives.

NOTES

[1] Dangers in intimacy: Craving and views.

[2] Dust: Passion, aversion and delusion.

[3] Ground, seed and sap: The khandhas (body, feelings, perceptions, thought formations and consciousness), sense spheres and elements form the ground in which grows the seed of constructive consciousness--the consciousness which develops into states of being and birth. The sap of this seed is craving and views.

[4] Dwellings: States of becoming and birth.

[5] He does not build: He performs none of the good or bad deeds that give rise to further states of becoming and birth.

[6] No effluents (_sava): He has none of the forms of defilement--sensual desire, views, states of becoming or ignorance--which "flow out" of the mind and give rise to the flood of the cycle of death and rebirth.

[7] The pillar at a bathing ford: The Cullavagga (V.l) describes this as an immovable pillar, standing quite tall and buried deep in the ground near a bathing place, against which young villagers and boxers would rub their bodies while bathing so as to toughen them. The "extremes" in which others speak, according to the Commentary, are extremes of praise and criticism: These leave the sage, like the pillar, unmoved.

[8] Straight as a shuttle: Having a mind unprejudiced by favoritism, dislike, delusion or fear.

[9] On-pitch and off (sama and visama): Throughout ancient cultures, the terminology of music was used to describe the moral quality of people and acts. Discordant intervals or poorly-tuned musical instruments were metaphors for evil; harmonious intervals and well-tuned instruments were metaphors for good. In Pali, the term sama--"even"--described an instrument tuned on-pitch: There is a famous passage where the Buddha reminds Sona Kolivisa--who had been over-exerting himself in the practice--that a lute sounds appealing only if the strings are neither too taut or too lax, but 'evenly' tuned. This image would have special resonances with the Buddha's

teaching on the middle way. It also adds meaning to the term sama_a--monk or contemplative--which the texts frequently mention as being derived from sama. The word samanna-- "evenness", the quality of being in tune--also means the quality of being a contemplative. This concept plays an important role in the Instructions to Rahula, below. The true contemplative is always in tune with what is proper and good.

[10] Intoxication: The three intoxications are intoxication with youth, with good health and with life.

[11] Ocean: The way defilement splashes into undesirable destinations (so says the Commentary).

[12] Flood: The flow of defilement: sensual desires, views, states of becoming and ignorance.

[13] Such: Unchanging; unaffected by anything.

[14] Rahula: the Buddha's son, who according to the Commentary was seven years old when this discourse was delivered to him.

[15] evenness: samanna. See n. 9.

Acknowledgments

The production manager would like to thank Venerable Ajahn Puriso, the translator, who kindly not only revised the text for this edition, but also helped with the final proof reading.

This book has come into existence with the help of many devoted people. Khun Vanee Lamsam, along with her brother Khun Parl Na Pombejra, raised the Fund to support all costs of publication. Khun Thanu Malakul Na Ayudhaya supplied us a slide of his beautiful painting for the cover. Khun Panya Vijinthanasarn helped with the cover design and illustrations. Khun Chutima Thanapura helped with the

first proof-reading. Khun Pansak Panpak-deeddisakul supplied us an invaluable photograph of Luang Por Chah (Phra Bodhinyana Thera). Khun Karoon Hansachainand helped with the pasting some parts of the artwork and saw the book through the press. May the kind meritorious deeds of the above-mentioned people help them experience the supreme bliss, Nibbana.

Introduction

The talks translated in this book were all taken from old cassette tape recordings of Venerable Ajahn Chah, some in Thai and some in the North-Eastern dialect, most recorded on poor quality equipment under less than optimum conditions. This presented some difficulty in the work of translation, which was overcome by occasionally omitting very unclear passages and at other times asking for advice from other listeners more familiar with those languages. Nevertheless there has inevitably been some editing in the process of making this book. Apart from the difficulties presented by the lack of clarity of the tapes, there is also the necessity of editing when one is taking words from the spoken to the written medium. For this, the translator takes full responsibility.

Pali words have occasionally been left as they are, in other cases translated. The criteria here has been readability. Those Pali words which were considered short enough or familiar enough to the reader already conversant with Buddhist terminology have generally been left untranslated. This should present no difficulty, as they are generally explained by the Venerable Ajahn in the course of the talk. Longer words, or words considered to be probably unfamiliar to the average reader, have been translated. Of these, there are two which are particularly noteworthy. They are //Kamasukhallikanuyogo// and //Attakilamathanuyogo//, which have been translated as Indulgence in Pleasure and Indulgence in Pain respectively. These two words occur in no less than five of the talks included in this book and although the

translations provided here are not those generally used for these word, they are nevertheless in keeping with the Venerable Ajahn's use of them.

Venerable Ajahn Chah always gave his talks in simple, everyday language. His objective was to clarify the //Dhamma//, not to confuse his listeners with an overlog of information. Consequently the talks presented here have been rendered into correspondingly simple English. The aim has been to present Ajahn Chah's teaching in both the spirit and the letter.

In this third printing of //A Taste of Freedom//, a number of corrections have been made to clumsily worded passages, of which there are now hopefully less than in the first editions. For such inadequacies the translator must also take responsibility, and hopes the reader will bear with any literary shortcomings in order to receive the full benefit of the teachings contained herein.

The translator

About this Mind...

About this mind... In truth there is nothing really wrong with it. It is intrinsically pure. Within itself it's already peaceful. That the mind is not peaceful these days is because it follows moods. The real mind doesn't have anything to it, it is simply (an aspect of) Nature. It becomes peaceful or agitated because moods deceive it. The untrained mind is stupid. Sense impressions come and trick it into happiness, suffering, gladness and sorrow, but the mind's true nature is none of those things. That gladness or sadness is not the mind, but only a mood coming to deceive us. The untrained mind gets lost and follows these things, it forgets itself. Then we think that it is we who are upset or at ease or whatever.

But really this mind of ours is already unmoving and peaceful... really peaceful! Just like a leaf which is still as long as no wind blows. If a wind comes up the leaf flutters. The fluttering is due to the wind -- the "fluttering" is due to those sense impressions; the mind follows them. If it doesn't follow them, it doesn't "flutter." If we know fully the true nature of sense impressions we will be unmoved.

Our practice is simply to see the Original Mind. So we must train the mind to know those sense impressions, and not get lost in them. To make it peaceful. Just this is the aim of all this difficult practice we put ourselves through.

* * *

> "... That which "looks over" the various factors which arise in meditation is 'sati', mindfulness. Sati is life. Whenever we don't have sati, when we are heedless, it's as if we are dead... This sati is simply presence of mind. It's cause for the arising of self-awareness and wisdom... Even when we are no longer in samadhi, sati should be present throughout..."

* * *

On Meditation

To calm the mind means to find the right balance. If you try to force your mind too much it goes too far; if you don't try enough it doesn't get there, it misses the point of balance.

Normally the mind isn't still, it's moving all the time, it lacks strength. Making the mind strong and making the body strong are not the same. To make the body strong we have to exercise it, to push it,

in order to make it strong, but to make the mind strong means to make it peaceful, not to go thinking of this and that. For most of us the mind has never been peaceful, it has never had the energy of //samadhi//, [*] so we establish it within a boundary. We sit in meditation, staying with the //One who knows//.

[*] //Samadhi// is the state of concentrated calm resulting from meditation practice.

If we force our breath to be too long or too short we're not balanced, the mind won't become peaceful. It's like when we first start to use a pedal sewing machine. At first we just practice pedaling the machine to get our co-ordination right, before we actually sew anything. Following the breath is similar. We don't get concerned over how long or short, weak or strong it is, we just note it. We simply let it be, following the natural breathing.

When it's balanced, we take the breathing as our meditation object. When we breathe in, the beginning of the breath is at the nose tip, the middle of the breath at the chest and the end of the breath at the abdomen. This is the path of the breath. When we breathe out, the beginning of the breath is at the abdomen, the middle at the chest and the end at the nose tip. We simply take note of this path of the breath at the nose tip, the chest and the abdomen, then at the abdomen, the chest and the tip of the nose. We take note of these three points in order to make the mind firm, to limit mental activity so that mindfulness and self-awareness can easily arise.

When we are adept at noting these three points we can let them go and note the in and out breathing, concentrating solely at the nose-tip or the upper lip where the air passes on its in and out passage. We don't have to follow the breath, just establish mindfulness in front of us at the nose-tip, and note the breath at this one point -- entering, leaving, entering, leaving. There's no need to think of anything special, just concentrate on this simple task for now, having continuous presence of mind. There's nothing more to do, just breathing in and out.

Soon the mind becomes peaceful, the breath refined. The mind and body become light. This is the right state for the work of meditation.

When sitting in meditation the mind becomes refined, but whatever state it's in we should try to be aware of it, to know it. Mental activity is there together with tranquility. There is //vitakka//. //Vitakka// is the action of bringing the mind to the theme of contemplation. If there is not much mindfulness, there will be not much //vitakka//. Then //vicara//, the contemplation around that theme, follows. Various "weak" mental impressions may arise from time to time but our self-awareness is the important thing -- whatever may be happening we know it continuously. As we go deeper we are constantly aware of the state of our meditation, knowing whether or not the mind is firmly established. Thus, both concentration and awareness are present.

To have a peaceful mind does not mean that there's nothing happening, mental impressions do arise. For instance, when we talk about the first level of absorption, we say it has five factors. Along with //vitakka// and //vicara//, //piti// (rapture) arises with the theme of contemplation and then //sukha// (happiness). These four things all lie together in the mind established in tranquility. They are as one state.

The fifth factor is //ekaggata// or one-pointedness. You may wonder how there can be one-pointedness when there are all these other factors as well. This is because they all become unified on that foundation of tranquility. Together they are called a state of //samadhi//. They are not everyday states of mind, they are factors of absorption. There are these five characteristics, but they do not disturb the basic tranquility. There is //vitakka//, but it does not disturb the mind; //vicara//, rapture and happiness arise but do not disturb the mind. The mind is therefore as one with these factors. The first level of absorption is like this.

We don't have to call it First //Jhana//, [*] Second //Jhana//, third //Jhana// and so on, let's just call it "a peaceful mind." As

the mind becomes progressively calmer it will dispense with //vitakka// and //vicara//, leaving only rapture and happiness. Why does the mind discard //vitakka// and //vicara//? This is because, as the mind becomes more refined, the activity of //vitakka// and //vicara// is too coarse to remain. At this stage, as the mind leaves off //vitakka// and //vicara//, feelings of great rapture can arise, tears may gush out. But as the //samadhi// deepens rapture, too, is discarded, leaving only happiness and one-pointedness, until finally even happiness goes and the mind reaches its greatest refinement. There are only equanimity and one-pointedness, all else has been left behind. The mind stands unmoving.

[*] Jhana is an advanced state of concentration or //samadhi//, wherein the mind becomes absorbed into its meditation subject. It is divided into four levels, each level progressively more refined than the previous one.

Once the mind is peaceful this can happen. You don't have to think a lot about it, it just happens by itself. This is called the energy of a peaceful mind. In this state the mind is not drowsy; the five hindrances, sense desire, aversion, restlessness, dullness and doubt, have all fled.

But if mental energy is still not strong and mindfulness weak, there will occasionally arise intruding mental impressions. The mind is peaceful but it's as if there's a "cloudiness" within the calm. It's not a normal sort of drowsiness though, some impressions will manifest -- maybe we'll hear a sound or see a dog or something. It's not really clear but it's not a dream either. This is because these five factors have become unbalanced and weak.

The mind tends to play tricks within these levels of tranquility. "Imagery" will sometimes arise when the mind is in this state, through any of the senses, and the meditator may not be able to tell exactly what is happening. "Am I sleeping? No. Is it a dream? No, it's not a dream..." These impressions arise from a middling sort of tranquility; but if the mind is truly calm and clear we don't doubt

the various mental impressions or imagery which arise. Questions like, "Did I drift off then? Was I sleeping? did I get lost?..." don't arise, for they are characteristics of a mind which is still doubting. "Am I asleep or awake?"... Here, it's fuzzy! This is the mind getting lost in its moods. It's like the moon going behind a cloud. You can still see the moon but the clouds covering it render it hazy. It's not like the moon which has emerged from behind the clouds -- clear, sharp and bright.

When the mind is peaceful and established firmly in mindfulness and self-awareness, there will be no doubt concerning the various phenomena which we encounter. The mind will truly be beyond the hindrances. We will clearly know as it is everything which arises in the mind. We do not doubt it because the mind is clear and bright. The mind which reaches //samadhi// is like this.

However some people find it hard to enter //samadhi// because it doesn't suit their tendencies. There is //samadhi//, but it's not strong or firm. But one can attain peace through the use of wisdom, through contemplating and seeing the truth of things, solving problems that way. This is using wisdom rather than the power of //samadhi//. To attain calm in practice it's not necessary to sit in meditation, for instance. Just ask yourself, "Ehh, what is that?..." and solve your problem right there! A person with wisdom is like this. Perhaps he can't really attain high levels of //samadhi//, although he develops some, enough to cultivate wisdom. It's like the difference between farming rice and farming corn. One can depend on rice more than corn for one's livelihood. Our practice can be like this, we depend more on wisdom to solve problems. When we see the truth, peace arises.

The two ways are not the same. Some people have insight and are strong in wisdom but do not have much //samadhi//. When they sit in meditation they aren't very peaceful. They tend to think a lot, contemplating this and that, until eventually they contemplate happiness and suffering and see the truth of them. Some incline more towards this than //samadhi//. Whether standing, walking, sitting or lying, [*] enlightenment of the Dhamma can take place. Through seeing,

through relinquishing, they attain peace. They attain peace through knowing the truth without doubt, because they have seen it for themselves.

[*] That is, at all times, in all activities.

Other people have only little wisdom but their //samadhi// is very strong. They can enter very deep //samadhi// quickly, but not having much wisdom, they cannot catch their defilements, they don't know them. They can't solve their problems.

But regardless of whichever approach we use, we must do away with wrong thinking, leaving only Right View. We must get rid of confusion, leaving only peace. Either way we end up at the same place. There are these two sides to practice, but these two things, calm and insight, go together. We can't do away with either of them. They must go together.

That which "looks over" the various factors which arise in meditation is 'sati', mindfulness. This //sati// is a condition which, through practice, can help other factors to arise. //Sati// is life. Whenever we don't have //sati//, when we are heedless, it's as if we are dead. If we have no //sati//, then our speech and actions have no meaning. This sati is simply recollection. It's a cause for the arising of self-awareness and wisdom. Whatever virtues we have cultivated are imperfect if lacking in //sati//. Sati is that which watches over us while standing, walking, sitting and lying. Even when we are no longer in //samadhi//, //sati// should be present throughout.

Whatever we do we take care. A sense of shame [*] will arise. We will feel ashamed about the things we do which aren't correct. As shame increases, our collectedness will increase as well. When collectedness increases, heedlessness will disappear. Even if we don't sit in meditation, these factors will be present in the mind.

[*] This is a "shame" based on knowledge of cause and effect,

rather than mere emotional guilt.

And this arises because of cultivating //sati//. Develop //sati//! This is the dhamma which looks over the work we are doing or have done in the past. It has usefulness. We should know ourselves at all times. If we know ourselves like this, right will distinguish itself from wrong, the path will become clear, and cause for all shame will dissolve. Wisdom will arise.

We can bring the practice all together as morality, concentration and wisdom. To be collected, to be controlled, this is morality. The firm establishing of the mind within that control is concentration. Complete, overall knowledge within the activity in which we are engaged is wisdom. The practice in brief is just morality, concentration and wisdom, or in other words, the path. There is no other way.

* * *

"...With right samadhi, no matter what level of calm is reached, there is awareness. There is full mindfulness and clear comprehension. This is the samadhi which can give rise to wisdom, one cannot get lost in it. Practitioners should understand this well..."

* * *

The Path in Harmony

Today I would like to ask you all. "Are you sure yet, are you certain

in your meditation practice?" I ask because these days there are many people teaching meditation, both monks and laypeople, and I'm afraid you may be subject to wavering and doubt. If we understand clearly, we will be able to make the mind peaceful and firm.

You should understand "the Eightfold Path" as morality, concentration and wisdom. The path comes together as simply this. Our practice is to make this path arise within us.

When sitting meditation we are told to close the eyes, not to look at anything else, because now we are going to look directly at the mind. When we close our eyes, our attention comes inwards. We establish our attention on the breath, center our feelings there, put our mindfulness there. When the factors of the path are in harmony we will be able to see the breath, the feelings, the mind and its mood for what they are. Here we will see the "focus point," where //samadhi// and the other factors of the Path converge in harmony.

When we are sitting in meditation, following the breath, think to yourself that now you are sitting alone. There is no-one sitting around you, there is nothing at all. Develop this feeling that you are sitting alone until the mind lets go of all externals, concentrating solely on the breath. If you are thinking, "This person is sitting over here, that person is sitting over there," there is no peace, the mind doesn't come inwards. Just cast all that aside until you feel there is no-one sitting around you, until there is nothing at all, until you have no wavering or interest in your surroundings.

Let the breath go naturally, don't force it to be short or long or whatever, just sit and watch it going in and out. When the mind lets go of all external impressions, the sounds of cars and such will not disturb you. Nothing, whether sights or sounds, will disturb you, because the mind doesn't receive them. Your attention will come together on the breath.

If the mind is confused and won't concentrate on the breath, take a full, deep breath, as deep as you can, and then let it all out till there is none left. Do this three times and then re-establish your

attention. The mind will become calm.

It's natural for it to be calm for a while, and then restlessness and confusion may arise again. When this happens, concentrate, breathe deeply again, and them re-establish your attention on the breath. Just keep going like this. When this has happened many times you will become adept at it, the mind will let go of all external manifestations. External impressions will not reach the mind. //Sati// will be firmly established. As the mind becomes more refined, so does the breath. Feelings will become finer and finer, the body and mind will be light. Our attention is solely on the inner, we see the in-breaths and out-breaths clearly, we see all impressions clearly. We will see the coming together of Morality, Concentration and Wisdom. This is called the Path in harmony. When there is this harmony our mind will be free of confusion, it will come together as one. This is called //samadhi//.

After watching the breath for a long time, it may become very refined; the awareness of the breath will gradually cease, leaving only bare awareness. The breath may become so refined it disappears! Perhaps we are "just sitting," as if there is no breathing at all. Actually there is breathing, but it seems as if there's none. This is because the mind has reached its most refined state, there is just bare awareness. It has gone beyond the breath. The knowledge that the breath has disappeared becomes established. What will we take as our object of meditation now? We take just this knowledge as our object, that is, the awareness that there's no breath.

Unexpected things may happen at this time; some people experience them, some don't. If they do arise, we should be firm and have strong mindfulness. Some people see that the breath has disappeared and get a fright, they're afraid they might die. Here we should know the situation just as it is. We simply notice that there's no breath and take that as our object of awareness. This, we can say, is the firmest, surest type of //samadhi//. There is only one firm, unmoving state of mind. Perhaps the body will become so light it's as if there is no body at all. We feel like we're sitting in empty space, all seems empty. Although this may seem very unusual, you should

understand that there's nothing to worry about. Firmly establish your mind like this.

When the mind is firmly unified, having no sense impressions to disturb it, one can remain in that state for any length of time. There will be no painful feelings to disturb us. When //samadhi// has reached this level, we can leave it when we choose, but if we come out of this //samadhi// we do so comfortably, not because we've become bored with it or tired. We come out because we've had enough for now, we feel at ease, we have no problems at all.

If we can develop this type of samadhi, then if we sit, say, thirty minutes or an hour, the mind will be cool and calm for many days. When the mind is cool and calm like this, it is clean. Whatever we experience, the mind will take up and investigate. This is a fruit of //samadhi//.

Morality has one function, concentration has another function and Wisdom another. These factors are like a cycle. We can see them all within the peaceful mind. When the mind is calm it has collectedness and restraint because of wisdom and the energy of concentration. As it becomes more collected it becomes more refined, which in turn gives morality the strength to increase in purity. As our morality becomes purer, this will help in the development of concentration. When concentration is firmly established it helps in the arising of wisdom. Morality, concentration and wisdom help each other, they are inter-related like this. In the end the Path becomes one and functions at all times. We should look after the strength which arises from the path, because it is the strength which leads to Insight and Wisdom.

* * *

On Dangers Of Samadhi

//Samadhi// is capable of bringing much harm or much benefit to the meditator, you can't say it brings only one or the other. For one who has no wisdom it is harmful, but for one who has wisdom it can bring real benefit, it can lead him to Insight.

That which can be most harmful to the meditator is Absorption //Samadhi// (//Jhana//), the //samadhi// with deep, sustained calm. This samadhi brings great peace. Where there is peace, there is happiness. When there is happiness, attachment and clinging to that happiness arise. The meditator doesn't want to contemplate anything else, he just wants to indulge in that pleasant feeling. When we have been practicing for a long time we may become adept at entering this //samadhi// very quickly. As soon as we start to note our meditation object, the mind enters calm, and we don't want to come out to investigate anything. We just get stuck on that happiness. This is a danger to one who is practicing meditation.

We must use //Upacara Samadhi//. Here, we enter calm and then, when the mind is sufficiently calm, we come out and look at outer activity. [*] Looking at the outside with a calm mind gives rise to wisdom. This is hard to understand, because it's almost like ordinary thinking and imagining. When thinking is there, we may think the mind isn't peaceful, but actually that thinking is taking place within the calm. There is contemplation but it doesn't disturb the calm. We may bring thinking up in order to contemplate it. Here we take up the thinking to investigate it, it's not that we are aimlessly thinking to investigate it, it's not that we are aimlessly thinking or guessing away; it's something that arises from a peaceful mind. This is called "awareness within calm and calm within awareness." If it's simply ordinary thinking and imagining, the mind won't be peaceful, it will be disturbed. But I am not talking about ordinary thinking, this is a feeling that arises from the peaceful mind. It's called "contemplation." Wisdom is born right here.

[*] "Outer activity" refers to all manner of sense impressions. It is used in contrast to the "inner activity" of absorption //samadhi// (//jhana//), where the mind does not "go out" to external sense impressions.

So, there can be right //samadhi// and wrong //samadhi//. Wrong //samadhi// is where the mind enters calm and there's no awareness at all. One could sit for two hours or even all day but the mind doesn't know where it's been or what's happened. It doesn't know anything. There is calm, but that's all. It's like a well-sharpened knife which we don't bother to put to any use. This is a deluded type of calm, because there is not much self-awareness. The meditator may think he has reached the ultimate already, so he doesn't bother to look for anything else. //Samadhi// can be an enemy at this level. Wisdom cannot arise because there is no awareness of right and wrong.

With right //samadhi//, no matter what level of calm is reached, there is awareness. There is full mindfulness and clear comprehension. This is the //samadhi// which can give rise to wisdom, one cannot get lost in it. Practitioners should understand this well. You can't do without this awareness, it must be present from beginning to end. This kind of //samadhi// has no danger.

You may wonder where does the benefit arise, how does the wisdom arise, from //samadhi//? When right //samadhi// has been developed, wisdom has the chance to arise at all times. When the eye sees form, the ear hears sound, the nose smells odor, the tongue experiences taste, the body experiences touch or the mind experiences mental impressions -- in all postures -- the mind stays with full knowledge of the true nature of those sense impressions, it doesn't "pick and choose." In any posture we are fully aware of the birth of happiness and unhappiness. We let go of both of these things, we don't cling. This is called Right Practice, which is present in all postures. These words "all postures" do not refer only to bodily postures, they refer to the mind, which has mindfulness and clear comprehension of the truth at all times. When //samadhi// has been rightly developed, wisdom arises like this. This is called "insight," knowledge of the truth.

There are two kinds of peace -- the coarse and the refined. The peace which comes from //samadhi// is the coarse type. When the mind

is peaceful there is happiness. The mind then takes this happiness to be peace. But happiness and unhappiness are becoming and birth. There is no escape from //samsara// [*] here because we still cling to them. So happiness is not peace, peace is not happiness.

[*] //Samsara//, the wheel of Birth of Death, is the world of all conditioned phenomena, mental and material, which has the three-fold characteristic of Impermanence, Unsatisfactoriness, and Not-self.

The other type of peace is that which comes from wisdom. Here we don't confuse peace with happiness; we know the mind which contemplates and knows happiness and unhappiness as peace. The peace which arises from wisdom is not happiness, but is that which sees the truth of both happiness and unhappiness. Clinging to those states does not arise, the mind rises above them. This is the true goal of all Buddhist practice.

* * *

"...The Buddha laid down Morality, Concentration and Wisdom as the Path to peace, the way to enlightenment. But in truth these things are not the essence of Buddhism. They are merely the Path...The essence of Buddhism is peace, and that peace arises from truly knowing the nature of all things..."

* * *

The Middle Way Within

The teaching of Buddhism is about giving up evil and practicing good.

Then, when evil is given up and goodness is established, we must let go of both good and evil. We have already heard enough about wholesome and unwholesome conditions to understand something about them, so I would like to talk about the Middle Way, that is, the path to escape from both of those things.

All the Dhamma talks and teachings of the Buddha have one aim -- to show the way out of suffering to those who have not yet escaped. The teachings are for the purpose of giving us the right understanding. If we don't understand rightly, then we can't arrive at peace.

When the various Buddhas became enlightened and gave their first teachings, they all declared these two extremes -- indulgence in pleasure and indulgence in pain. [*] These two ways are the ways of infatuation, they are the ways between which those who indulge in sense pleasures must fluctuate, never arriving at peace. They are the paths which spin around in //samsara//.

[*] See Introduction.

The Enlightened One observed that all beings are stuck in these two extremes, never seeing the Middle Way of Dhamma, so he pointed them out in order to show the penalty involved in both. Because we are still stuck, because we are still wanting, we live repeatedly under their way. The Buddha declared that these two ways are the ways of intoxication, they are not the way of a meditator, nor the ways to peace. These ways are indulgence in pleasure and indulgence in pain, or, to put it simply, the way of slackness and the way of tension. If you investigate within, moment by moment, you will see that the tense way is anger, the way of sorrow. Going this way there is only difficulty and distress. Indulgence in Pleasure -- if you've escaped from this, it means you've escaped from happiness. These ways, both happiness and unhappiness, are not peaceful states. The Buddha taught to let go of both of them. This is right practice. This is the Middle Way.

These words, "the Middle Way," do not refer to our body and speech,

they refer to the mind. When a mental impression which we don't like arises, it affects the mind and there is confusion. When the mind is confused, when it's "shaken up," this is not the right way. When a mental impression arises which we like, the mind goes to indulgence in pleasure -- that's not the way either.

We people don't want suffering, we want happiness. But in fact happiness is just a refined form of suffering. Suffering itself is the coarse form. You can compare them to a snake. The head of the snake is unhappiness, the tail of the snake is happiness. The head of the snake is really dangerous, it has the poisonous fangs. If you touch it, the snake will bite straight away. But never mind the head, even if you go and hold onto the tail, it will turn around and bite you just the same, because both the head and the tail belong to the one snake.

In the same way, both happiness and unhappiness, or pleasure and sadness, arise from the same parent -- wanting. So when you're happy the mind isn't peaceful. It really isn't! For instance, when we get the things we like, such as wealth, prestige, praise or happiness, we become pleased as a result. But the mind still harbors some uneasiness because we're afraid of losing it. That very fear isn't a peaceful state. Later on we may actually lose that thing and then we really suffer. Thus, if you aren't aware, even if you're happy, suffering is imminent. It's just the same as grabbing the snake's tail -- if you don't let go it will bite. So whether it's the snake's tail or its head, that is, wholesome or unwholesome conditions, they're all just characteristics of the Wheel of Existence, of endless change.

The Buddha established morality, concentration and wisdom as the path to peace, the way to enlightenment. But in truth these things are not the essence of Buddhism. They are merely the path. The Buddha called them "Magga," which means "path." The essence of Buddhism is peace, and that peace arises from truly knowing the nature of all things. If we investigate closely, we can see that peace is neither happiness nor unhappiness. Neither of these is the truth.

The human mind, the mind which the Buddha exhorted us to know and investigate, is something we can only know by its activity. The true

"original mind" has nothing to measure it by, there's nothing you can know it by. In its natural state it is unshaken, unmoving. When happiness arises all that happens is that this mind is getting lost in a mental impression, there is movement. When the mind moves like this, clinging and attachment to those things come into being.

The Buddha has already laid down the path of practice fully, but we have not yet practiced, or if we have, we've practiced only in speech. Our minds and our speech are not yet in harmony, we just indulge in empty talk. But the basis of Buddhism is not something that can be talked about or guessed at. The real basis of Buddhism is full knowledge of the truth of reality. If one knows this truth then no teaching is necessary. If one doesn't know, even if he listens to the teaching, he doesn't really hear. This is why the Buddha said, "The Enlightened One only points the way." He can't do the practice for you, because the truth is something you cannot put into words or give away.

All the teachings are merely similes and comparisons, means to help the mind see the truth. If we haven't seen the truth we must suffer. For example, we commonly say "sankharas" [*] when referring to the body. Anybody can say it, but in fact we have problems simply because we don't know the truth of these //sankharas//, and thus cling to them. Because we don't know the truth of the body, we suffer.

> [*] In the Thai language the word "sungkahn," from the Pali word //sankhara// (the name given to all conditioned phenomena), is a commonly used term for the body. The Venerable Ajahn uses the word in both ways.

Here is an example. Suppose one morning you're walking to work and a man yells abuse and insults at you from across the street. As soon as you hear this abuse your mind changes from its usual state. You don't feel so good, you feel angry and hurt. That man walks around abusing you night and day. When you hear the abuse, you get angry, and even when you return home you're still angry because you feel vindictive, you want to get even.

A few days later another man comes to your house and calls out, "Hey! That man who abused you the other day, he's mad, he's crazy! Has been for years! He abuses everybody like that. Nobody takes any notice of anything he says." As soon as you hear this you are suddenly relieved. That anger and hurt that you've pent up within you all these days melts away completely. Why? Because you know the truth of the matter now. Before, you didn't know, you thought that man was normal, so you were angry at him. Understanding like that caused you to suffer. As soon as you find out the truth, everything changes: "Oh, he's mad! That explains everything!" When you understand this you feel fine, because you know for yourself. Having known, then you can let go. If you don't know the truth you cling right there. When you thought that man who abused you was normal you could have killed him. But when you find out the truth, that he's mad, you feel much better. This is knowledge of the truth.

Someone who sees the Dhamma has a similar experience. When attachment, aversion and delusion disappear, they disappear in the same way. As long as we don't know these things we think, "What can I do? I have so much greed and aversion." This is not clear knowledge. It's just the same as when we thought the madman was sane. When we finally see that he was mad all along we're relieved of worry. No-one could show you this. Only when the mind sees for itself can it uproot and relinquish attachment.

It's the same with this body which we call //sankharas//. Although the Buddha has already explained that it's not substantial or a real being as such, we still don't agree, we stubbornly cling to it. If the body could talk, it would be telling us all day long, "You're not my owner, you know." Actually it's telling us all the time, but it's Dhamma language, so we're unable to understand it. For instance, the sense organs of eye, ear, nose, tongue and body are continually changing, but I've never seen them ask permission from us even once! Like when we have a headache or a stomachache -- the body never asks permission first, it just goes right ahead, following its natural course. This shows that the body doesn't allow anyone to be its owner, it doesn't have an owner. The Buddha described it as an empty thing.

We don't understand the Dhamma and so we don't understand these //sankharas//; we take them to be ourselves, as belonging to us or belonging to others. This gives rise to clinging. When clinging arises, "becoming" follows on. Once becoming arises, then there is birth. Once there is birth, then old age, sickness, death...the whole mass of suffering arises. This is the //Paticcasamuppada//. [*] We say ignorance gives rise to volitional activities, they give rise to consciousness and so on. All these things are simply events in mind. When we come into contact with something we don't like, if we don't have mindfulness, ignorance is there. Suffering arises straight away. But the mind passes through these changes so rapidly that we can't keep up with them. It's the same as when you fall from a tree. Before you know it -- "Thud!" -- you've hit the ground. Actually you've passed many branches and twigs on the way but you couldn't count them, you couldn't remember them as you passed them. You just fall, and then "Thud!"

[*] //Paticcasamuppada// -- The Chain of Conditioned Arising, one of the central doctrines of Buddhist philosophy.

The //Paticcasamuppada// is the same as this. If we divide it up as it is in the scriptures, we say ignorance gives rise to volitional activities, volitional activities give rise to consciousness, consciousness gives rise to mind and matter, mind and matter give rise to the six sense bases, the sense bases give rise to sense contact, contact gives rise to feeling, feeling gives rise to wanting, wanting gives rise to clinging, clinging gives rise to becoming, becoming gives rise to birth, birth gives rise to old age, sickness, death, and all forms of sorrow. But in truth, when you come into contact with something you don't like, there's immediate suffering! That feeling of suffering is actually the result of the whole chain of the //Paticcasamuppada//. This is why the Buddha exhorted his disciples to investigate and know fully their own minds.

When people are born into the world they are without names - once born, we name them. This is convention. We give people names for the sake of convenience, to call each other by. The scriptures are the

same. We separate everything up with labels to make studying the reality convenient. In the same way, all things are simply //sankharas//. Their original nature is merely that of things born of conditions. The Buddha said that they are impermanent, unsatisfactory and not-self. They are unstable. We don't understand this firmly, our understanding is not straight, and so we have wrong view. This wrong view is that the //sankharas// are ourselves, we are the //sankharas//, or that happiness and unhappiness are ourselves, we are happiness and unhappiness. Seeing like this is not full, clear knowledge of the true nature of things. The truth is that we can't force all these things to follow our desires, they follow the way of nature.

A simple comparison is this: suppose you go and sit in the middle of a freeway with the cars and trucks charging down at you. You can't get angry at the cars, shouting, "Don't drive over here! Don't drive over here!" It's a freeway, you can't tell them that! So what can you do? You get off the road! The road is the place where cars run, if you don't want the cars to be there, you suffer.

It's the same with //sankharas//. We say they disturb us, like when we sit in meditation and hear a sound. We think, "Oh, that sound's bothering me." If we understand that the sound bothers us then we suffer accordingly. If we investigate a little deeper, we will see that it's we who go out and disturb the sound! The sound is simply sound. If we understand like this then there's nothing more to it, we leave it be. We see that the sound is one thing, we are another. One who understands that the sound comes to disturb him is one who doesn't see himself. He really doesn't! Once you see yourself, then you're at ease. The sound is just sound, why should you go and grab it? You see that actually it was you who went out and disturbed the sound. This is real knowledge of the truth. You see both sides, so you have peace. If you see only one side, there is suffering. Once you see both sides, then you follow the Middle Way. This is the right practice of the mind. This is what we call "straightening out our understanding."

In the same way, the nature of all //sankharas// is impermanence and death, but we want to grab them, we carry them about and covet them.

We want them to be true. We want to find truth within the things that aren't true! Whenever someone sees like this and clings to the //sankharas// as being himself, he suffers. The Buddha wanted us to consider this.

The practice of Dhamma is not dependent on being a monk, a novice, or a layman; it depends on straightening out your understanding. If our understanding is correct, we arrive at peace. Whether you are ordained or not it's the same, every person has the chance to practice Dhamma, to contemplate it. We all contemplate the same thing. If you attain peace, it's all the same peace; it's the same Path, with the same methods.

Therefore the Buddha didn't discriminate between laymen and monks, he taught all people to practice to know the truth of the //sankharas//. When we know this truth, we let them go. If we know the truth there will be no more becoming or birth. How is there no more birth? There is no way for birth to take place because we fully know the truth of //sankharas//. If we fully know the truth, then there is peace. Having or not having, it's all the same. Gain and loss are one. The Buddha taught us to know this. This is peace; peace from happiness, unhappiness, gladness and sorrow.

We must see that there is no reason to be born. Born in what way? Born into gladness: When we get something we like we are glad over it. If there is no clinging to that gladness there is no birth; if there is clinging, this is called "birth." So if we get something, we aren't born (into gladness). If we lose, then we aren't born (into sorrow). This is the birthless and the deathless. Birth and death are both founded in clinging to and cherishing the //sankharas//.

So the Buddha said. "There is no more becoming for me, finished is the holy life, this is my last birth." There! He knew the birthless and the deathless! This is what the Buddha constantly exhorted his disciples to know. This is the right practice. If you don't reach it, if you don't reach the Middle Way, then you won't transcend suffering.

* * *

"...Meditation means to make the mind peaceful in order to let wisdom arise...To put it shortly, it's just a matter of happiness and unhappiness. Happiness is pleasant feeling in the mind, unhappiness is just unpleasant feeling. The Buddha taught to separate this happiness and unhappiness from the mind..."

* * *

The Peace Beyond

It's of great importance that we practice the Dhamma. If we don't practice, then all our knowledge is only superficial knowledge, just the outer shell of it. It's as if we have some sort of fruit but we haven't eaten it yet. Even though we have that fruit in our hand we get no benefit from it. Only through the actual eating of the fruit we really know its taste.

The Buddha didn't praise those who merely believe others, he praised the person who knows within himself. Just as with that fruit, if we have tasted it already, we don't have to ask anyone else if it's sweet or sour. Our problems are over. Why are they over? Because we see according to the truth. One who has realized the Dhamma is like one who has realized the sweetness or sourness of the fruit. All doubts are ended right here.

When we talk about Dhamma, although we may say a lot, it can usually be brought down to four things. They are simply to know suffering, to know the cause of suffering, to know the end of suffering and to know the path of practice leading to the end of suffering. This is all

there is. All that we have experienced on the path of practice so far comes down to these four things. When we know these things, our problems are over.

Where are these four things born? They are born just within the body and the mind, nowhere else. So why is the Dhamma of the Buddha so broad and expansive? This is so in order to explain these things in a more refined way, to help us to see them.

When Siddhattha Gotama was born into the world, before he saw the Dhamma, he was an ordinary person just like us. When he knew what he had to know, that is the truth of suffering, the cause, the end and the way leading to the end of suffering, he realized the Dhamma and became a perfectly Enlightened Buddha.

When we realize the Dhamma, wherever we sit we know Dhamma, wherever we are we hear the Buddha's teaching. When we understand Dhamma, the Buddha is within our mind, the Dhamma is within our mind, and the practice leading to wisdom is within our own mind. Having the Buddha, the Dhamma and the Sangha within our mind means that whether our actions are good or bad, we know clearly for ourselves their true nature. It was thus that the Buddha discarded worldly opinions, he discarded praise and criticism. When people praised or criticized him he just accepted it for what it was. These two things are simply worldly conditions so he wasn't shaken by them. Why not? Because he knew suffering. He knew that if he believed in that praise or criticism they would cause him to suffer.

When suffering arises it agitates us, we feel ill at ease. What is the cause of that suffering? It's because we don't know the Truth, this is the cause. When the cause is present, then suffering arises. Once arisen we don't know how to stop it. The more we try to stop it, the more it comes on. We say, "Don't criticize me," or "Don't blame me". Trying to stop it like this, suffering really comes on, it won't stop.

So the Buddha taught that the way leading to the end of suffering is to make the Dhamma arise as a reality within our own minds. We become

one who witnesses the Dhamma for himself. If someone says we are good we don't get lost in it; they say we are no good we don't get lost in it; they say we are no good and we don't forget ourselves. This way we can be free. "Good" and "evil" are just worldly dhammas, they are just states of mind. If we follow them our mind becomes the world, we just grope in the darkness and don't know the way out. If it's like this then we have not yet mastered ourselves. We try to defeat others, but in doing so we only defeat ourselves; but if we have mastery over ourselves then we have mastery over all -- over all mental formations, sights, sounds, smells, tastes and bodily feelings.

Now I'm talking about externals, they're like that, but the outside is reflected inside also. Some people only know the outside, they don't know the inside. Like when we say to "see the body in the body." Having seen the outer body is not enough, we must know the body within the body. Then, having investigated the mind, we should know the mind within the mind.

Why should we investigate the body? What is this "body in the body"? When we say to know the mind, what is this "mind"? If we don't know the mind then we don't know the things within the mind. This is to be someone who doesn't know suffering, doesn't know the cause, doesn't know the end and doesn't know the way. The things which should help to extinguish suffering don't help, because we get distracted by the things which aggravate it. It's just as if we have an itch on our head and we scratch our leg! If it's our head that's itchy then we're obviously not going to get much relief. In the same way, when suffering arises we don't know how to handle it, we don't know the practice leading to the end of suffering.

For instance, take this body, this body that each of us has brought along to this meeting. If we just see the form of the body there's no way we can escape suffering. Why not? Because we still don't see the inside of the body, we only see the outside. We only see it as something beautiful, something substantial. The Buddha said that only this is not enough. We see the outside with our eyes; a child can see it, animals can see it, it's not difficult. The outside of the body is easily seen, but having seen it we stick to it, we don't know the

truth of it. Having seen it we grab onto it and it bites us!

So we should investigate the body within the body. Whatever's in the body, go ahead and look at it. If we just see the outside it's not clear. We see hair, nails and so on and they are just pretty things which entice us, so the Buddha taught to see the inside of the body, to see the body within the body. What is in the body? Look closely within! We will see many things inside to surprise us, because even though they are within us, we've never seen them. Wherever we walk we carry them with us, sitting in a car we carry them with us, but we still don't know them at all!

It's as if we visit some relatives at their house and they give us a present. We take it and put it in our bag and then leave without opening it to see what is inside. When at last we open it -- full of poisonous snakes! Our body is like this. If we just see the shell of it we say it's fine and beautiful. We forget ourselves. We forget impermanence, unsatisfactoriness and not-self. If we look within this body it's really repulsive. If we look according to reality, without trying to sugar things over, we'll see that it's really pitiful and wearisome. Dispassion will arise. This feeling of "disinterest" is not that we feel aversion for the world or anything; it's simply our mind clearing up, our mind letting go. We see things are naturally established just as they are. However we want them to be, they just go their own way regardless. Whether we laugh or cry, they simply are the way they are. Things which are unstable are unstable; things which are not beautiful are not beautiful.

So the Buddha said that when we experience sights, sounds, tastes, smells, bodily feelings or mental states, we should release them. When the ear hears sounds, let them go. When the nose smells an odor, let it go...just leave it at the nose! When the bodily feelings arise, let go of the like or dislike that follow, let them go back to their birth-place. The same for mental states. All these things, just let them go their way. This is knowing. Whether it's happiness or unhappiness, it's all the same. This is called meditation.

Meditation means to make the mind peaceful in order to let wisdom

arise. This requires that we practice with body and mind in order to see and know the sense impressions of form, sound, taste, smell, touch and mental formations. To put it shortly, it's just a matter of happiness and unhappiness. Happiness is pleasant feeling in the mind, unhappiness is just unpleasant feeling. The Buddha taught to separate this happiness and unhappiness from the mind. The mind is that which knows. Feeling [*] is the characteristic of happiness or unhappiness, like or dislike. When the mind indulges in these things we say that it clings to or takes that happiness and unhappiness to be worthy of holding. That clinging is an action of mind, that happiness or unhappiness is feeling.

[*] Feeling is a translation of the Pali word //vedana//, and should be understood in the sense Ajahn Chah herein describes it: as the mental states of like, dislike, gladness, sorrow, etc.

When we say the Buddha told us to separate the mind from the feeling, he didn't literally mean to throw them to different places. He meant that the mind must know happiness and know unhappiness. When sitting in //samadhi//, for example, and peace fills the mind, then happiness comes but it doesn't reach us, unhappiness comes but doesn't reach us. This is to separate the feeling from the mind. We can compare it to oil and water in a bottle. They don't combine. Even if you try to mix them, the oil remains oil and the water remains water. Why is this so? Because they are of different density.

The natural state of the mind is neither happiness nor unhappiness. When feeling enters the mind then happiness or unhappiness is born. If we have mindfulness then we know pleasant feeling as pleasant feeling. The mind which knows will not pick it up. Happiness is there but it's "outside" the mind, not buried within the mind. The mind simply knows it clearly.

If we separate unhappiness from the mind, does that mean there is no suffering, that we don't experience it? Yes, we experience it, but we know mind as mind, feeling as feeling. We don't cling to that feeling

or carry it around. The Buddha separated these things through knowledge. Did he have suffering? He knew the state of suffering but he didn't cling to it, so we say that he cut suffering off. And there was happiness too, but he knew that happiness, if it's not known, is like a poison. He didn't hold it to be himself. Happiness was there through knowledge, but it didn't exist in his mind. Thus we say that he separated happiness and unhappiness from his mind.

When we say that the Buddha and the Enlightened Ones killed defilements, [*] it's not that they really killed them. If they had killed all defilements then we probably wouldn't have any! They didn't kill defilements; when they knew them for what they are, they let them go. Someone who's stupid will grab them, but the Enlightened Ones knew the defilements in their own minds as a poison, so they swept them out. They swept out the things which caused them to suffer, they didn't kill them. One who doesn't know this will see some things, such as happiness, as good, and then grab them, but the Buddha just knew them and simply brushed them away.

[*] Defilements, or //kilesa//, are the habits born of ignorance which infest the minds of all unenlightened beings.

But when feeling arises for us we indulge in it, that is, the mind carries that happiness and unhappiness around. In fact they are two different things. The activities of mind, pleasant feeling, unpleasant feeling and so on, are mental impressions, they are the world. If the mind knows this it can equally do work involving happiness or unhappiness. Why? Because it knows the truth of these things. Someone who doesn't know them sees them as equal. If you cling to happiness it will be the birth-place of unhappiness later on, because happiness is unstable, it changes all the time. When happiness disappears, unhappiness arises.

The Buddha knew that because both happiness and unhappiness are unsatisfactory, they have the same value. When happiness arose he let it go. He had right practice, seeing that both these things have equal values and drawbacks. They come under the Law of Dhamma, that is, they are unstable and unsatisfactory. Once born, they die. When he saw

this, right view arose, the right way of practice became clear. No matter what sort of feeling or thinking arose in his mind, he knew it as simply the continuous play of happiness and unhappiness. He didn't cling to them.

When the Buddha was newly enlightened he gave a sermon about indulgence in Pleasure and Indulgence in Pain. "Monks! Indulgence in Pleasure is the loose way, Indulgence in Pain is the tense way." These were the two things that disturbed his practice until the day he was enlightened, because at first he didn't let go of them. When he knew them, he let them go, and so was able to give his first sermon.

So we say that a meditator should not walk the way of happiness or unhappiness, rather he should know them. Knowing the truth of suffering, he will know the cause of suffering, the end of suffering and the way leading to the end of suffering. And the way out of suffering is meditation itself. To put it simply, we must be mindful.

Mindfulness is knowing, or presence of mind. Right now what are we thinking, what are we doing? What do we have with us right now? We observe like this, we are aware of how we are living. When we practice like this wisdom can arise. We consider and investigate at all times, in all postures. When a mental impression arises that we like to know it as such, we don't hold it to be anything substantial. It's just happiness. When unhappiness arises we know that it's Indulgence in Pain, it's not the path of a meditator.

This is what we call separating the mind from the feeling. If we are clever we don't attach, we leave things be. We become the 'one who knows'. The mind and feeling are just like oil and water; they are in the same bottle but they don't mix. Even if we are sick or in pain, we still know the feeling as feeling, the mind as mind. We know the painful or comfortable states but we don't identify with them. We stay only with peace: the peace beyond both comfort and pain.

You should understand it like this, because if there is no permanent self then there is no refuge. You must live like this, that is, without happiness and without unhappiness. You stay only with the

knowing, you don't carry things around.

As long as we are still unenlightened all this may sound strange but it doesn't matter, we just set our goal in this direction. The mind is the mind. It meets happiness and unhappiness and we see them as merely that, there's nothing more to it. They are divided, not mixed. If they are all mixed up then we don't know them. It's like living in a house; the house and its occupant are related, but separate. If there is danger in our house we are distressed because we must protect it, but if the house catches fire we get out of it. If painful feeling arises we get out of it, just like that house. When it's full of fire and we know it, we come running out of it. They are separate things; the house is one thing, the occupant is the other.

We say that we separate mind and feeling in this way but in fact they are by nature already separate. Our realization is simply to know this natural separateness according to reality. When we say they are not separated it's because we're clinging to them through ignorance of the truth.

So the Buddha told us to meditate. This practice of meditation is very important. Merely to know with the intellect is not enough. The knowledge which arises from practice with a peaceful mind and the knowledge which comes from study are really far apart. The knowledge which comes from study is not real knowledge of our mind. The mind tries to hold onto and keep this knowledge. Why do we try to keep it? Just lose it! And then when it's lost we cry!

If we really know, then there's letting go, leaving things be. We know how things are and don't forget ourselves. If it happens that we are sick we don't get lost in that. Some people think, "This year I was sick the whole time, I couldn't meditate at all." These are the words of a really foolish person. Someone who's sick and dying should really be diligent in his practice. One may say he doesn't trust his body, and so he feels that he can't meditate. If we think like this then things are difficult. The Buddha didn't teach like that. He said that right here is the place to meditate. When we're sick or almost dying that's when we can really know and see reality.

Other people say they don't have the chance to meditate because they're too busy. Sometimes school teachers come to see me. They say they have many responsibilities so there's no time to meditate. I ask them, "When you're teaching do you have time to breathe?" They answer, "Yes." "So how can you have time to breathe if the work is so hectic and confusing? Here you are far from Dhamma."

Actually this practice is just about the mind and its feelings. It's not something that you have to run after or struggle for. Breathing continues while working. Nature takes care of the natural processes -- all we have to do is try to be aware. Just to keep trying, going inwards to see clearly. Meditation is like this.

If we have that presence of mind then whatever work we do will be the very tool which enables us to know right and wrong continually. There's plenty of time to meditate, we just don't fully understand the practice, that's all. While sleeping we breathe, eating we breathe, don't we? Why don't we have time to meditate? Wherever we are we breathe. If we think like this then our life has as much value as our breath, wherever we are we have time.

All kinds of thinking are mental conditions, not conditions of body, so we need simply have presence of mind, then we will know right and wrong at all times. Standing, walking, sitting and lying, there's plenty of time. We just don't know how to use it properly. Please consider this.

We cannot run away from feeling, we must know it. Feeling is just feeling, happiness is just happiness, unhappiness is just unhappiness. They are simply that. So why should we cling to them? If the mind is clever, simply to hear this is enough to enable us to separate feeling from the mind.

If we investigate like this continuously the mind will find release, but it's not escaping through ignorance. The mind lets go, but it knows. It doesn't let go through stupidity, not because it doesn't want things to be the way they are. It lets go because it knows

according to the truth. This is seeing nature, the reality that's all around us.

When we know this we are someone who's skilled with the mind, we are skilled with mental impressions. When we are skilled with mental impressions we are skilled with the world. This is to be a "Knower of the World." The Buddha was someone who clearly knew the world with all its difficulty. He knew the troublesome, and that which was not troublesome was right there. This world is so confusing, how is it that the Buddha was able to know it? Here we should understand that the Dhamma taught by the Buddha is not beyond our ability. In all postures we should have presence of mind and self-awareness -- and when it's time to sit meditation we do that.

We sit in meditation to establish peacefulness and cultivate mental energy. We don't do it in order to play around at anything special. Insight meditation is sitting in //samadhi// itself. At some places they say, "Now we are going to sit in //samadhi//, after that we'll do insight meditation." Don't divide them like this! Tranquility is the base which gives rise to wisdom; wisdom is the fruit of tranquility. To say that now we are going to do calm meditation, later we'll do insight -- you can't do that! You can only divide them in speech. Just like a knife, the blade is on one side, the back of the blade on the other. You can't divide them. If you pick up one side you get both sides. Tranquility gives rise to wisdom like this.

Morality is the father and mother of Dhamma. In the beginning we must have morality. Morality is peace. This means that there are no wrong doings in body or speech. When we don't do wrong then we don't get agitated; when we don't become agitated then peace and collectedness arise within the mind. So we say that morality, concentration and wisdom are the path on which all the Noble Ones have walked to enlightenment. They are all one. Morality is concentration, concentration is morality. Concentration is wisdom, wisdom is concentration. It's like a mango. When it's a flower we call it a flower. When it becomes a fruit we call it a mango. When it ripens we call it a ripe mango. It's all one mango but it continually changes. The big mango grows from the small mango, the small mango becomes a

big one. You can call them different fruits or all one. Morality, concentration and wisdom are related like this. In the end it's all the path that leads to enlightenment.

The mango, from the moment it first appears as a flower, simply grows to ripeness. This is enough, we should see it like this. Whatever others call it, it doesn't matter. Once it's born it grows to old age, and then where? We should contemplate this.

Some people don't want to be old. When they get old they become regretful. These people shouldn't eat ripe mangoes! Why do we want the mangoes to be ripe? If they're not ripe in time, we ripen them artificially, don't we? But when we become old we are filled with regret. Some people cry, they're afraid to get old or die. If it's like this then they shouldn't eat ripe mangoes, better eat just the flowers! If we can see this then we can see the Dhamma. Everything clears up, we are at peace. Just determine to practice like that.

So today the Chief Privy Councillor and his party have come together to hear the Dhamma. You should take what I've said and contemplate it. If anything is not right, please excuse me. But for you to know whether it's right or wrong depends on your practicing and seeing for yourselves. Whatever's wrong, throw it out. If it's right then take it and use it. But actually we practice in order to let go both right and wrong. In the end we just throw everything out. If it's right, throw it out; wrong, throw it out! Usually if it's right we cling to rightness, if it's wrong we hold it to be wrong, and then arguments follow. But he Dhamma is the place where there's nothing -- nothing at all.

* * *

"...The Buddha was enlightened in the world, he contemplated the world. If he hadn't contemplated the world, if he hadn't seen the world, he couldn't have risen above it. The Buddha's enlightenment was simply enlightenment of this very world. The

world was still there: gain and loss, praise and criticism, fame and disrepute, happiness and unhappiness were all still there. If there weren't these things there would be nothing to become enlightened to..."

* * *

Opening the Dhamma Eye

Some of us start to practice, and even after a year or two, still don't know what's what. We are still unsure of the practice. When we're still unsure, we don't see that everything around us is purely Dhamma, and so we turn to teachings from the Ajahns. But actually, when we know our own mind, when there is //sati// to look closely at the mind, there is wisdom. All times and all places become occasions for us to hear the Dhamma.

We can learn Dhamma from nature, from trees for example. A tree is born due to causes and it grows following the course of nature. Right here the tree is teaching us Dhamma, but we don't understand this. In due course, it grows until it buds, flowers and fruit appear. All we see is the appearance of the flowers and fruit; we're unable to bring this within and contemplate it. Thus we don't know that the tree is teaching us Dhamma. The fruit appears and we merely eat it without investigating: sweet, sour or salty, it's the nature of the fruit. And this Dhamma, the teaching of the fruit. Following on, the leaves grow old. They wither, die and then fall from the tree. All we see is that the leaves have fallen down. We step on them, we sweep them up, that's all. We don't investigate thoroughly, so we don't know that nature is teaching us. Later on the new leaves sprout, and we merely see that, without taking it further. We don't bring these things into our minds to contemplate.

If we can bring all this inwards and investigate it, we will see that the birth of a tree and our own birth are no different. This body

of ours is born and exists dependent on conditions, on the elements of earth, water, wind and fire. It has its food, it grows and grows. Every part of the body changes and flows according to its nature. It's no different from the tree; hair, nails, teeth and skin -- all change. If we know the things of nature, then we will know ourselves.

People are born. In the end they die. Having died they are born again. Nails, teeth and skin are constantly dying and re-growing. If we understand the practice then we can see that a tree is no different from ourselves. If we understand the teaching of the Ajahns, then we realize that the outside and the inside are comparable. Things which have consciousness and those without consciousness do not differ. They are the same. And if we understand this sameness, then when we see the nature of a tree, for example, we will know that it's no different from our own five //khandhas// [*] -- body, feeling, memory, thinking and consciousness. If we have this understanding then we understand Dhamma. If we understand Dhamma we understand the five //khandhas//, how they constantly shift and change, never stopping.

[*] //Khandhas//. They are the five "groups" which go to make up what we call "a person."

So whether standing, walking, sitting or lying we should have //sati// to watch over and look after the mind. When we see external things it's like seeing internals. When we see internals it's the same as seeing externals. If we understand this then we can hear the teaching of the Buddha. If we understand this, then we can say that Buddha-nature, the 'One who knows', has been established. It knows the external. It knows the internal. It understands all things which arise. Understanding like this, then sitting at the foot of a tree we hear the Buddha's teaching. Standing, walking, sitting or lying, we hear the Buddha's teaching. Seeing, hearing, smelling, tasting, touching and thinking, we hear the Buddha's teaching. The Buddha is just this 'One who knows' within this very mind. It knows the Dhamma, it investigates the Dhamma. It's not that the Buddha-nature, the 'one who knows', arises. The mind becomes illumined.

If we establish the Buddha within our mind then we see everything, we contemplate everything, as no different from ourselves. We see various animals, trees, mountains and vines as no different from ourselves. We see poor people and rich people -- they're no different! They all have the same characteristics. One who understands like this is content wherever he is. He listens to the Buddha's teaching at all times. If we don't understand this, then even if we spend all our time listening to teachings from the various Ajahns, we still won't understand their meaning.

The Buddha said that enlightenment of the Dhamma is just knowing Nature, [*] the reality which is all around us, the Nature which is right here! If we don't understand this Nature we experience disappointment and joy, we get lost in moods, giving rise to sorrow and regret. Getting lost in mental objects is getting lost in Nature. When we get lost in Nature then we don't know Dhamma. The Enlightened One merely pointed out this Nature.

[*] Nature here refers to all things, mental and physical, not just trees, animals, etc.

Having arisen, all things change and die. Things we make, such as plates, bowls and dishes, all have the same characteristic. A bowl is molded into being due to a cause, man's impulse to create, and as we use it, it gets old, breaks up and disappears. Trees, mountains and vines are the same, right up to animals and people.

When Anna Kondanna, the first disciple, heard the Buddha's teaching for the first time, the realization he had was nothing very complicated. He simply saw that whatever thing is born, that thing must change and grow old as a natural condition and eventually it must die. Anna Kondanna had never thought of this before, or if he had it wasn't thoroughly clear, so he hadn't yet let go, he still clung to the //khandhas//. As he sat mindfully listening to the Buddha's discourse, Buddha-nature arose in him. He received a sort of Dhamma "transmission," which was the knowledge that all conditioned things are impermanent. Any thing which is born must have aging and death as

a natural result.

This feeling was different from anything he'd ever known before. He truly realized his mind, and so "Buddha" arose within him. At that time the Buddha declared that Anna Kondanna had received the Eye of Dhamma.

What is it that this Eye of Dhamma sees? This Eye sees that whatever is born has aging and death as a natural result. "Whatever is born" means everything! Whether material or immaterial, it all comes under this "whatever is born." It refers to all of Nature. Like this body for instance -- it's born and then proceeds to extinction. When it's small it "dies" from smallness to youth. After a while it "dies" from youth and becomes middle-aged. Then it goes on to "die" from middle-age and reach old-age, finally reaching the end. Trees, mountains and vines all have this characteristic.

So the vision or understanding of the 'One who knows' clearly entered the mind of Anna Kondanna as he sat there. This knowledge of "whatever is born" became deeply embedded in his mind, enabling him to uproot attachment to the body. This attachment was //sakkayaditthi//. This means that he didn't take the body to be a self or a being, or in terms of "he" or "me." He didn't cling to it. He saw it clearly, thus uprooting //sakkayaditthi//.

And the //vicikiccha// (doubt) was destroyed. Having uprooted attachment to the body he didn't doubt his realization. //Silabbata paramasa// [*] was also uprooted. His practice became firm and straight. Even if his body was in pain or fever he didn't grasp it, he didn't doubt. He didn't doubt, because he had uprooted clinging. This grasping of the body is called //silabbata paramasa//. When one uproots the view of the body being the self, grasping and doubt are finished with. If just this view of the body as the self arises within the mind then grasping and doubt begin right there.

[*] //Silabbata paramasa// is traditionally translated as attachment to rites and rituals. Here the Venerable Ajahn relates it, along with doubt, specifically to the body.

These three things, //sakkayaditthi//, //vicikiccha//, and //silabbata paramasa//, are, in the scriptures, the first three of the ten "fetters," which are given up on the first glimpse of Enlightenment, known as "Stream Entry." At full Enlightenment all ten fetters are transcended.

So as the Buddha expounded the Dhamma, Anna Kondanna opened the Eye of Dhamma. This Eye is just the "One who knows clearly." It sees things differently. It sees this very nature. Seeing Nature clearly, clinging is uprooted and the 'One who knows' is born. Previously he knew but he still had clinging. You could say that he knew the Dhamma but he still hadn't seen it, or he had seen the Dhamma but still wasn't one with it.

At this time the Buddha said, "Kondanna knows." What did he know? He just knew Nature! Usually we get lost in Nature, as with this body of ours. Earth, water, fire and wind come together to make this body. It's an aspect of Nature, a material object we can see with the eye. It exists depending on food, growing and changing until finally it reaches extinction.

Coming inwards, that which watches over the body is consciousness -- just this 'One who knows', this single awareness. If it receives through the ear it's called hearing; through the nose it's called smelling; through the tongue, tasting; through the body, touching; and through the mind, thinking. This consciousness is just one but when it functions at different places we call it different things. Through the eye we call it one thing, through the ear we call it another. But whether it functions at the eye, ear, nose, tongue, body or mind it's just one awareness. Following the scriptures we call it the six consciousness, but in reality there is only one consciousness arising at these six different bases. There are six "doors" but a single awareness, which is this very mind.

This mind is capable of knowing the truth of Nature. If the mind still has obstructions, then we say it knows through ignorance. It knows wrongly and it sees wrongly. Knowing wrongly and seeing wrongly,

or knowing and seeing rightly, it's just a single awareness. We say wrong view and right view but it's just one thing. Right and wrong both arise from this one place. When there is wrong knowledge we say that Ignorance conceals the truth. When there is wrong knowledge then there is wrong view, wrong intention, wrong action, wrong livelihood -- everything is wrong! And on the other hand the path of right practice is born in this same place. When there is right then the wrong disappears.

The Buddha practiced enduring many hardships and torturing himself with fasting and so on, but he investigated deeply into his mind until finally he uprooted ignorance. All the Buddhas were enlightened in mind, because the body knows nothing. You can let it eat or not, it doesn't matter, it can die at any time. The Buddhas all practiced with the mind. They were enlightened in mind.

The Buddha, having contemplated his mind, gave up the two extremes of practice -- indulgence in pleasure and indulgence in pain -- and in his first discourse expounded the Middle Way between these two. But we hear his teaching and it grates against our desires. We're infatuated with pleasure and comfort, infatuated with happiness, thinking we are good, we are fine -- this is indulgence in pleasure. It's not the right path. Dissatisfaction, displeasure, dislike and anger -- this is indulgence in pain. These are the extreme ways which one on the path of practice should avoid.

These "ways" are simply the happiness and unhappiness which arise. The "one on the path" is this very mind, the 'One who knows'. If a good mood arises we cling to it as good, this is indulgence in pleasure. If an unpleasant mood arises we cling to it through dislike- this is indulgence in pain. These are the wrong paths, they aren't the ways of a meditator. They're the ways of the worldly, those who look for fun and happiness and shun unpleasantness and suffering.

The wise know the wrong paths but they relinquish them, they give them up. They are unmoved by pleasure and displeasure, happiness and unhappiness. These things arise but those who know don't cling to them, they let them go according to their nature. This is right view.

When one knows this fully there is liberation. Happiness and unhappiness have no meaning for an Enlightened One.

The Buddha said that the Enlightened Ones were far from defilements. This doesn't mean that they ran away from defilements, they didn't run away anywhere. Defilements were there. He compared it to a lotus leaf in a pond of water. The leaf and the water exist together, they are in contact, but the leaf doesn't become damp. The water is like defilements and the lotus leaf is the Enlightened Mind.

The mind of one who practices is the same; it doesn't run away anywhere, it stays right there. Good, evil, happiness, and unhappiness, right and wrong arise, and he knows them all. The meditator simply knows them, they don't enter his mind. That is, he has no clinging. He is simply the experiencer. To say he simply experiences is our common language. In the language of Dhamma we say he lets his mind follow the Middle Way.

These activities of happiness, unhappiness and so on are constantly arising because they are characteristics of the world. The Buddha was enlightened in the world, he contemplated the world. If he hadn't contemplated the world, if he hadn't seen the world, he couldn't have risen above it. The Buddha's Enlightenment was simply enlightenment of this very world. The world was still there: gain and loss, praise and criticism, fame and disrepute, happiness and unhappiness were still there. If there weren't these things there would be nothing to become enlightened to! What he knew was just the world, that which surrounds the hearts of people. If people follow these things, seeking praise and fame, gain and happiness, and trying to avoid their opposites, they sink under the weight of the world.

Gain and loss, praise and criticism, fame and disrepute, happiness and unhappiness -- this is the world. The person who is lost in the world has no path of escape, the world overwhelms him. This world follows the Law of Dhamma so we call it worldly dhamma. He who lives within the worldly dhamma is called a worldly being. He lives surrounded by confusion.

Therefore the Buddha taught us to develop the path. We can divide it up into morality, concentration and wisdom -- develop them to completion! This is the path of practice which destroys the world. Where is this world? It is just in the minds of beings infatuated with it! The action of clinging to praise, gain, fame, happiness and unhappiness is called "world." when it is there in the mind, then the world arises, the worldly being is born. The world is born because of desire. Desire is the birthplace of all worlds. To put an end to desire is to put an end to the world.

Our practice of morality, concentration and wisdom is otherwise called the Eightfold Path. This Eightfold Path and the eight worldly dhammas are a pair. How is it that they are a pair? If we speak according to the scriptures, we say that gain and loss, praise and criticism, fame and disrepute, happiness and unhappiness are the eight worldly dhammas. Right view, Right Intention, Right Speech, Right Action, Right Livelihood, Right Effort, Right Mindfulness and Right Concentration, this is the Eightfold Path. These two eightfold ways exist in the same place. The eight worldly dhammas are right here in this very mind, with the 'One who knows' but this 'One who knows' has obstructions, so it knows wrongly and thus becomes the world. It's just this one 'One who knows', no other! The Buddha-nature has not yet arisen in this mind, it has not yet extracted itself from the world. The mind like this is the world.

When we practice the path, when we train our body and speech, it's all done in that very same mind. It's the same place so they see each other; the path sees the world. If we practice with this mind of ours we encounter this clinging to praise, fame, pleasure and happiness, we see the attachment to the world.

The Buddha said, "You should know the world. It dazzles like a king's royal carriage. Fools are entranced, but the wise are not deceived." It's not that he wanted us to go all over the world looking at everything, studying everything about it. He simply wanted us to watch this mind which is attached to it. When the Buddha told us to look at the world he didn't want us to get stuck in it, he wanted us to investigate it, because the world is born just in this mind.

sitting in the shade of a tree you can look at the world. When there is desire the world comes into being right there. Wanting is the birth place of the world. To extinguish wanting is to extinguish the world.

When we sit in meditation we want the mind to become peaceful, but it's not peaceful. Why is this? We don't want to think but we think. It's like a person who goes to sit on an ant's nest: the ants just keep on biting him. When the mind is the world then even sitting still with our eyes closed, all we see is the world. Pleasure, sorrow, anxiety, confusion -- it all arises. Why is this? It's because we still haven't realized Dhamma. If the mind is like this the meditator can't endure the worldly dhammas, he doesn't investigate. It's just the same as if he were sitting on an ants' nest. The ants are going to bite because he's right on their home! So what should he do? He should look for some poison or use fire to drive them out.

But most Dhamma practitioners don't see it like that. If they feel content they just follow contentment, feeling discontent they just follow that. Following the worldly dhammas the mind becomes the world. Sometimes we may think, "Oh, I can't do it, it's beyond me...", so we don't even try! This is because the mind is full of defilements, the worldly dhammas prevent the path from arising. We can't endure in the development of morality, concentration and wisdom. It's just like that man sitting on the ants' nest. He can't do anything, the ants are biting and crawling all over him, he's immersed in confusion and agitation. He can't rid his sitting place of the danger, so he just sits there, suffering.

So it is with our practice. The worldly dhammas exist in the minds of worldly beings. When those beings wish to find peace the worldly dhammas arise right there. When the mind is ignorant there is only darkness. When knowledge arises the mind is illumined, because ignorance and knowledge are born in the same place. When ignorance has arisen, knowledge can't enter, because the mind has accepted ignorance. When knowledge has arisen, ignorance cannot stay.

So the Buddha exhorted his disciples to practice with the mind, because the world is born in this mind, the eight worldly dhammas are

there. The Eightfold Path, that is, investigation through calm and insight meditation, our diligent effort and the wisdom we develop, all these things loosen the grip of the world. Attachment, aversion and delusion become lighter, and being lighter, we know them as such. If we experience fame, material gain, praise, happiness or suffering we're aware of it. We must know these things before we can transcend the world, because the world is within us.

When we're free of these things it's just like leaving a house. When we enter a house what sort of feeling do we have? We feel that we've come through the door and entered the house. When we leave the house we feel that we've left it, we come into the bright sunlight, it's not dark like it was inside. The action of the mind entering the worldly dhammas is like entering the house. The mind which has destroyed the worldly dhammas is like one who has left the house.

So the Dhamma practitioner must become one who witnesses the Dhamma for himself. He knows for himself whether the worldly dhammas have left or not, whether or not the path has been developed. When the path has been well developed it purges the worldly dhammas. It becomes stronger and stronger. Right view grows as wrong view decreases, until finally the path destroys defilements -- either that or defilements will destroy the path!

Right view and wrong view, there are only these two ways. Wrong view has its tricks as well, you know, it has its wisdom -- but it's wisdom that's misguided. The meditator who begins to develop the path experiences a separation. Eventually it's as if he is two people -- one in the world and the other on the path. They divide, they pull apart. Whenever he's investigating there's this separation, and it continues on and on until the mind reaches insight, vipassana.

Or maybe it's //vipassanu//! [*] Having tried to establish wholesome results in our practice, seeing them, we attach to them. This type of clinging comes from our wanting to get something from the practice. This is //vipassanu//, the wisdom of defilements (i.e., "defiled wisdom"). Some people develop goodness and cling to it, they develop purity and cling to that, or they develop knowledge and cling to that.

The action of clinging to that goodness or knowledge is //vipassanu//, infiltrating our practice.

[*] I.e., //vipassanupakkilesa// -- the subtle defilements arising from meditation practice.

So when you develop //vipassana//, be careful! Watch out for //vipassanu//, because they're so close that sometimes you can't tell them apart. But with right view we can see them both clearly. If it's //vipassanu// there will be suffering arising at times as a result. If it's really //vipassana// there's no suffering. There is peace. Both happiness and unhappiness are silenced. This you can see for yourself.

This practice requires endurance. Some people, when they come to practice, don't want to be bothered by anything, they don't want friction. But there's friction the same as before. We must try to find an end to friction through friction itself! So, if there's friction in your practice, then it's right. If there's no friction it's not right, you just eat and sleep as much as you want. When you want to go anywhere or say anything you just follow your desires. The teaching of the Buddha grates. The supermundane goes against the worldly. Right view opposes wrong view, purity opposes impurity. The teaching grates against our desires.

There's a story in the scriptures about the Buddha, before he was enlightened. At that time, having received a plate of rice, he floated that plate on a stream of water, determining in his mind, "If I am to be enlightened, may this plate float against the current of the water." The plate floated upstream! That plate was the Buddha's right view, or the Buddha-nature that he became awakened to. It didn't follow the desires of ordinary beings. It floated against the flow of his mind, it was contrary in every way.

These days, in the same way, the Buddha's teaching is contrary to our hearts. People want to indulge in greed and hatred but the Buddha won't let them. They want to be deluded but the Buddha destroys delusion. So the mind of the Buddha is contrary to that of worldly beings. The world calls the body beautiful, he says it's not

beautiful. They say the body belongs to us, he says not so. They say it's substantial, he says it's not. Right view is above the world. Worldly beings merely follow the flow of the stream.

Continuing on, when the Buddha got up from there, he received eight handfuls of grass from a brahmin. The real meaning of this is that the eight handfuls of grass were the right worldly dhammas -- gain and loss, praise and criticism, fame and disrepute, happiness and unhappiness. The Buddha, having received this grass, determined to sit on it and enter //samadhi//. The action of sitting on the grass was itself //samadhi//, that is, his mind was above the worldly dhammas, subduing the world until it realized the transcendent. The worldly dhammas became like refuse for him, they lost all meaning. He sat over them but they didn't obstruct his mind in any way. The various maras came to try to overcome him, but he just sat there in //samadhi//, subduing the world, until finally he became enlightened to the Dhamma and completely defeated Mara. [*] That is, he defeated the world. So the practice of developing the path is that which kills defilements.

[*] Mara (the Tempter), the Buddhist personification of evil. To the meditator it is all that obstructs the quest for enlightenment.

People these days have little faith. Having practiced a year or two they want to get there, and they want to go fast. They don't consider that the Buddha, our Teacher, had left home a full six years before he became enlightened. This is why we have "freedom from dependence." [*] According to the scriptures, a monk must have at least five rains [**] before he is considered able to live on his own. By this time he has studied and practiced sufficiently, he has adequate knowledge, he has faith, his conduct is good. Someone who practices for five years, I say he's competent. But he must really practice, not just "hang out" in the robes for five years. He must really look after the practice, really do it!

[*] "Freedom from dependence," that is, he lives under the guidance of a senior monk, for the first five years.

[**] "Rains" refers to the yearly three-month rains retreat by which monks count their age. Thus, a monk of five rains has been ordained for five years.

Until you reach five rains you may wonder, "What is this 'freedom from dependence' that the Buddha talked about?" You must really try to practice for five years and then you'll know for yourself the qualities he was referring to. After that time you should be competent, competent in mind, one who is certain. At the very least, after five rains, one should be at the first stage of enlightenment. This is not just five rains in body but five rains in mind as well. That monk has fear of blame, a sense of shame and modesty. He doesn't dare to do wrong either in front of people or behind their backs, in the light or in the dark. Why not? Because he has reached the Buddha, 'The One who knows'. He takes refuge in the Buddha, the Dhamma and the Sangha.

To depend truly on the Buddha, the Dhamma and the Sangha we must see the Buddha. What use would it be to take refuge without knowing the Buddha? If we don't yet know the Buddha, the Dhamma and the Sangha, our taking refuge in them is just an act of body and speech, the mind still hasn't reached them. Once the mind reaches them we know what the Buddha, the Dhamma, and the Sangha are like. Then we can really take refuge in them, because these things arise in our minds. Wherever we are we will have the Buddha, the Dhamma and the Sangha with us.

One who is like this doesn't dare to commit evil acts. This is why we say that one who has reached the first stage of enlightenment will no longer be born in the woeful states. His mind is certain, he has entered the Stream, there is no doubt for him. If he doesn't reach full enlightenment today it will certainly be some time in the future. He may do wrong but not enough to send him to Hell, that is, he doesn't regress to evil bodily and verbal actions, he is incapable of it. So we say that person has entered the Noble Birth. He cannot return. This is something you should see and know for yourselves in this very life.

These days, those of us who still have doubts about the practice hear these things and say, "Oh, how can I do that?" Sometimes we feel happy, sometimes troubled, pleased or displeased. For what reason? Because we don't know Dhamma. What Dhamma? Just the Dhamma of Nature, the reality around us, the body and the mind.

The Buddha said, "Don't cling to the five //khandhas//, let them go, give them up!" Why can't we let them go? Just because we don't see them or know them fully. We see them as ourselves, we see ourselves in the //khandhas//. Happiness and suffering, we see as ourselves, we see ourselves in happiness and suffering. We can't separate ourselves from them. When we can't separate them it means we can't see Dhamma, we can't see Nature.

Happiness, unhappiness, pleasure and sadness -- none of them is us but we take them to be so. These things come into contact with us and we see a lump of 'atta', or self. Wherever there is self there you will find happiness, unhappiness and everything else. So the Buddha said to destroy this "lump" of self, that is to destroy //sakkaya ditthi//. When //atta// (self) is destroyed, //anatta// (non-self) naturally arises.

We take Nature to be us and ourselves to be Nature, so we don't know Nature truly. If it's good we laugh with it, if it's bad we cry over it. But Nature is simply sankharas. As we say in the chanting, //Tesam vupasamo sukho// -- pacifying the //sankharas// is real happiness. How do we pacify them? We simply remove clinging and see them as they really are.

So there is truth in this world. Trees, mountains and vines all live according to their own truth, they are born and die following their nature. It's just we people who aren't true! We see it and make a fuss over it, the Nature is impassive, it just is as it is. We laugh, we cry, we kill, but Nature remains in truth, it is truth. No matter how happy or sad we are, this body just follows its own nature. It's born, it grows up and ages, changing and getting older all the time. It follows Nature in this way. Whoever takes the body to be himself and

carries it around with him, will suffer.

So Anna Kondanna recognized this "whatever is born" in everything, be it material or immaterial. His view of the world changed. He saw the truth. Having got up from his sitting place he took that truth with him. The activity of birth and death continued but he simply looked on. Happiness and unhappiness were arising and passing away but he merely noted them. His mind was constant. He no longer fell into the woeful states. He didn't get over-pleased or unduly upset about these things. His mind was firmly established in the activity of contemplation.

There! Anna Kondanna had received the Eye of Dhamma. He saw Nature, which we call //sankharas//, according to truth. Wisdom is that which knows the truth of //sankharas//. This is the mind which knows and sees Dhamma, which has surrendered.

Until we have seen the Dhamma we must have patience and restraint. We must endure, we must renounce! We must cultivate diligence and endurance. Why must we cultivate diligence? Because we're lazy! Why must we develop endurance? Because we don't endure! That the way it is. But when we are already established in our practice, have finished with laziness, then we don't need to use diligence. If we already know the truth of all mental states, if we don't get happy or unhappy over them, we don't need to exercise endurance, because the mind is already Dhamma. The 'One who knows' has seen the Dhamma, he is the Dhamma.

When the mind is Dhamma, it stops. It has attained peace. There's no longer a need to do anything special, because the mind is Dhamma already. The outside is Dhamma, the inside is Dhamma. The 'One who knows' is Dhamma. The state is Dhamma and that which knows the state is Dhamma. It is one. It is free.

This Nature is not born, it does not age nor sicken. This Nature does not die. This Nature is neither happy nor sad, neither big nor small, heavy nor light; neither short nor long, black nor white. There's nothing you can compare it to. No convention can reach it. This is why we say //Nirvana// has no colour. All colors are merely

conventions. The state which is beyond the world is beyond the reach of worldly conventions.

So the Dhamma is that which is beyond the world. It is that which each person should see for himself. It is beyond language. You can't put it into words, you can only talk about ways and means of realizing it. The person who has seen it for himself has finished his work.

* * *

"...Regardless of time and place, the whole practice of Dhamma comes to completion at the place where there is nothing. It's the place of surrender, of emptiness, of laying down the burden..."

* * *

Convention and Liberation

The things of this world are merely conventions of our own making. Having established them we get lost in them, and refuse to let go, giving rise to clinging to our personal views and opinions. This clinging never ends, it is //samsara//, flowing endlessly on. It has no completion. Now, if we know conventional reality then we'll know Liberation. If we clearly know Liberation, then we'll know convention. This is to know the Dhamma. Here there is completion.

Take people, for instance. In reality people don't have any names, we are simply born naked into the world. If we have names, they arise only through convention. I've contemplated this and seen that is you don't know the truth of this convention it can be really harmful. It's simply something we use for convenience. Without it we couldn't

communicate, there would be nothing to say, no language.

I've seen the Westerners when they sit in meditation together in the West. When they get up after sitting, men and women together, sometimes they go and touch each other on the head! [*] When I saw this I thought, "Ehh, if we cling to convention it gives rise to defilements right there." If we can let go of convention, give up our opinions, we are at peace.

[*] The head is regarded as sacred in Thailand, and to touch a person's head is considered an insult. Also, according to tradition, men and women do not touch each other in public. On the other hand, sitting in meditation is regarded as a "holy" activity. Perhaps here the Venerable Ajahn was using an example of Western behavior which particularly shock a Thai audience.

Like the generals and colonels, men of rank and position, who come to see me. When they come they say, "Oh, please touch my head." [*] If they ask like this there's nothing wrong with it, they're glad to have their heads touched. But if you tapped their heads in the middle of the street it'd be a different story! This is because of clinging. So I feel that letting go is really the way of peace. Touching a head is against our customs, but in reality it is nothing. When they agree to having it touched there's nothing wrong with it, just like touching a cabbage or a potato.

[*] It is considered auspicious in Thailand to have one's head touched by a highly esteemed monk.

Accepting, giving up, letting go -- this is the way of lightness. Wherever you're clinging there's becoming and birth right there. There's danger right there. The Buddha taught about convention and he taught to undo convention in the right way, and so reach Liberation. This is freedom, not to cling to conventions. All things in this world have a conventional reality. Having established them we should not be

fooled by them, because getting lost in them really leads to suffering. This point concerning rules and conventions is of utmost importance. One who can get beyond them is beyond suffering.

However, they are a characteristic of our world. Take Mr. Boonmah, for instance; he used to be just one of the crowd but now he's been appointed the District Commissioner. It's just a convention but it's a convention we should respect. It's part of the world of people. If you think, "Oh, before we were friends, we used to work at the tailor's together," and then you go and pat him on the head in public, he'll get angry. It's not right, he'll resent it. So we should follow the conventions in order to avoid giving rise to resentment. It's useful to understand convention, living in the world is just about this. Know the right time and place, know the person.

Why is it wrong to go against conventions? It's wrong because of people! You should be clever, knowing both convention and Liberations. Know the right time for each. If we know how to use rules and conventions comfortably then we are skilled. But if we try to behave according to the higher level of reality in the wrong situation, this is wrong. Where is it wrong? It's wrong with people's defilements, nothing else! People all have defilements. In one situation we behave one way, in another situation we must behave in another way. We should know the ins and outs because we live within conventions. Problems occur because people cling to them. If we suppose something to be, then it is. It's there because we suppose it to be there. But if you look closely, in the absolute sense these things don't really exist.

As I have often said, before we were laymen and now we are monks. We lived within the convention of "layman" and now we live within the convention of "monk." We are monks by convention, not monks through Liberation. In the beginning we establish conventions like this, but if a person merely ordains, this doesn't mean he overcomes defilements. If we take a handful of sand and agree to call it salt, does this make it salt? It is salt, but only in name, not in reality. You couldn't use it to cook with. It's only use is within the realm of that agreement, because there's really no salt there, only sand. It becomes salt only through our supposing it to be so.

This word "Liberation" is itself just a convention, but it refers to that beyond conventions. Having achieved freedom, having reached liberation, we still have to use convention in order to refer to it as liberation. If we didn't have convention we couldn't communicate, so it does have its use.

For example, people have different names but they are all people just the same. If we didn't have names to differentiate between them, and we wanted to call out to somebody standing in a crowd, saying, "Hey, Person! Person!", that would be useless. You couldn't say who would answer you because they're all "person." But if you called, "Hey, John!", then John would come, the others wouldn't answer. Names fulfill just this need. Through them we can communicate, they provide the basis for social behavior.

So you should know both convention and liberation. Conventions have a use, but in reality there really isn't anything there. Even people are non-existent! They are merely groups of elements, born of causal conditions, growing dependent on conditions, existing for a while, or control it. But without conventions we would have nothing to say, we'd have no names, no practice, no work. Rules and conventions are established to give us a language, to make things convenient, and that's all.

Take money, for example. In olden times there weren't any coins or notes, they had no value. People used to barter goods, but those things were difficult to keep, so they created money using coins and notes. Perhaps in the future we'll have a new king decree that we don't have to use paper money, we should use wax, melting it down and pressing it into lumps. We say this is money and use it throughout the country. Let alone wax, it may even happen that they decide to make chicken dung the local currency -- all the other things can't be money, just chicken dung! Then people would fight and kill each other over chicken dung! This is the way it is. You could use many examples to illustrate convention. What we use for money is simply a convention that we have set up, it has its use within that convention. Having decreed it to be money, it becomes money. But in reality, what is

money? Nobody can say. When there is a popular agreement about something, then a convention comes about to fulfill the need. The world is just this.

This is convention, but to get ordinary people to understand liberation is really difficult. Our money, our house, our family, our children and relatives are simply conventions that we have invented, but really, seen in the light of Dhamma, they don't belong to us. Maybe if we hear this we don't feel so good, but in reality is like that. These things have value only through the established conventions. If we establish that it doesn't have value, then it doesn't have value. This is the way it is, we bring convention into the world to fulfill a need.

Even this body is not really ours, we just suppose it to be so. It's truly just a supposition. If you try to find a real, substantial self within it, you can't. There are merely elements which are born, continue for a while and then die. Everything is like this. There's no real, true substance to it, but it's proper that we use it. It's a tool for your use. If it breaks there is trouble, so even though it must break, you should try your utmost to preserve it. And so we have the four supports [*] which the Buddha taught again and again to contemplate. They are the supports on which a monk depends to continue his practice. As long as you live you must depend on them, but you should understand them. Don't cling to them, giving rise to craving in your mind.

[*] The four supports -- robes, alms-food, lodgings, and medicines.

Convention and liberation are related like this continually. Even though we use convention, don't place your trust in it as being the truth. If you cling to it, suffering will arise. The case of right and wrong is a good example. Some people see wrong as being right and right as being wrong, but in the end who really knows what is right and what is wrong? We don't know. Different people establish different conventions about what's right and what's wrong, but the Buddha took

suffering as his guide-line. If you want to argue about it there's no end to it. One says, "right," another says, "wrong." One says "wrong," another says "right." In truth we don't really know right and wrong at all! But at a useful, practical level, we can say that right is not to harm oneself and not to harm others. This way fulfills a use.

So, after all, both rules and conventions and liberation are simply dhammas. One is higher than the other, but they go hand in hand. There is no way that we can guarantee that anything is definitely like this or like that, so the Buddha said to just leave it be. Leave it be as uncertain. However much you like it or dislike it, you should understand it as uncertain.

Regardless of time and place, the whole practice of Dhamma comes to completion at the place where there is nothing. It's the place of surrender, of emptiness, of laying down the burden. This is the finish. It's not like the person who says, "Why is the flag fluttering in the wind? I say it's because of the wind." Another person say's it's because of the flag. The other retorts that it's because of the wind. There's no end to this! The same as the old riddle, "Which came first, the chicken or the egg?" There's no way to reach a conclusion, this is just Nature.

All these things we say are merely conventions, we establish them ourselves. If you know these things with wisdom then you'll know impermanence, unsatisfactoriness and not-self. This is the outlook which leads to enlightenment.

You know, training and teaching people with varying levels of understanding is really difficult. Some people have certain ideas, you tell them something and they don't believe you. You tell them the truth and they say it's not true. "I'm right, you're wrong..." There's no end to this. If you don't let go there will be suffering. I've told you before about the four men who go into the forest. They hear a chicken crowing, "Kak-ka-dehhh!" One of them wonders, "Is that a rooster or a hen?" Three of them say together, "It's a hen," but the other doesn't agree, he insists it's a rooster. "How could a hen crow like that?" he asks. They retort, "Well, it has a mouth, hasn't it?"

They argue till the tears fall, really getting upset over it, but in the end they're all wrong. Whether you say a hen or a rooster, they're only names. We establish these conventions, saying a rooster is like this, a hen is like that; a rooster cries like this, a hen cries like that...and this is how we get stuck in the world! Remember this! Actually, if you just say that really there's no hen and no rooster then that's the end of it. In the field of conventional reality one side is right and the other side it wrong, but there will never be complete agreement. Arguing till the tears fall has no use!

The Buddha taught not to cling. How do we practice non-clinging? We practice simply to give up clinging, but this non-clinging is very difficult to understand. It takes keen wisdom to investigate and penetrate this, to really achieve non-clinging. When you think about it, whether people are happy or sad, content or discontent, doesn't depend on their having little or having much -- it depends on wisdom. All distress can be transcended only through wisdom, through seeing the truth of things.

So the Buddha exhorted us to investigate, to contemplate. This "contemplation" means simply to try to solve these problems correctly. This is our practice. Like birth, old age, sickness and death -- they are the most natural and common of occurrences. The Buddha taught to contemplate birth, old age, sickness and death, but some people don't understand this. "What is there to contemplate?" they say. They're born but they don't know birth, they will die but they don't know death.

A person who investigates these things repeatedly will see. Having seen he will gradually solve his problems. Even if he still has clinging, if he has wisdom and sees that old age, sickness and death are the way of Nature, then he will be able to relieve suffering. We study the Dhamma simply for this -- to cure suffering. There isn't really much as the basis of Buddhism, there's just the birth and death of suffering, and this the Buddha called the truth. Birth is suffering, old age is suffering, sickness is suffering and death is suffering. People don't see this suffering as the truth. If we know truth, then we know suffering.

This pride in personal opinions, these arguments, they have no end. In order to put our minds at rest, to find peace, we should contemplate our past, the present, and the things which are in store for us. Like birth, old age, sickness and death. What can we do to avoid being plagued by these? Even though we may still have a little worry, if we investigate till we know according to the truth, all suffering will abate, we will no longer cling to it.

* * *

"...The worldly way is to do things for a reason, to get some return, but in Buddhism we do things without any gaining idea.. If we don't want anything at all, what will we get? We don't get anything! Whatever you get is just a cause for suffering, so we practice not getting anything... Just make the mind peaceful and have done with it!..."

* * *

No Abiding

We hear some parts of the teachings and can't really understand them. We think they shouldn't be the way they are, so we don't follow them, but really there is a reason to all the teachings. Maybe it seems that things shouldn't be that way, but they are. At first I didn't even believe in sitting meditation. I couldn't see what use it would be to just sit with your eyes closed. And walking meditation...walk from this tree, turn around and walk back again... "Why bother?" I thought, "What's the use of all that walking?" I thought like that, but actually walking and sitting meditation are of great use.

Some people's tendencies make them prefer walking meditation, others prefer sitting, but you can't do without either of them. In the

scriptures they talk about the four postures: standing, walking, sitting and lying. We live with these four postures. We may prefer one to the other, but we must use all four.

They say to make these four postures even, to make the practice even in all postures. At first I couldn't figure out what this meant, to make them even. Maybe it means we sleep for two hours, then stand for two hours, then walk for two hours...maybe that's it? I tried it -- couldn't do it, it was impossible! That's not what it meant to make the postures even. "Making the postures even" refers to the mind, to our awareness. That is, to make the mind give rise to wisdom, to illumine the mind. This wisdom of ours must be present in all postures; we must know, or understand, constantly. Standing, walking, sitting or lying, we know all mental states as impermanent, unsatisfactory and not-self. Making the postures even in this way can be done, it is possible. Whether like or dislike are present in the mind we don't forget our practice, we are aware.

If we just focus our attention on the mind constantly then we have the gist of the practice. Whether we experience mental states which the world knows as good or bad we don't forget ourselves, we don't get lost in good or bad. We just go straight. Making the postures constant in this way is possible. If we have constancy in our practice and we are praised, then it's simply praise; if we are blamed, then it's just blame. We don't get high or low over it, we stay right here. Why? Because we see the danger in all those things, we see their results. We are constantly aware of the danger in both praise and blame. Normally, if we have a good mood the mind is good also, we see them, as the same thing; if we have a bad mood the mind goes bad as well, we don't like it. This is the way it is, this is uneven practice.

If we have constancy just to the extent of knowing our moods, and knowing we're clinging to them, this is better already. That is, we have awareness, we know what's going on, but we still can't let go. We see ourselves clinging to good and bad, and we know it. We cling to good and know it's still not right practice, but we still can't let go. This is 50% or 70% of the practice already. There still isn't release but we know that if we could let go that would be the way to

peace. We keep going like that, seeing the equally harmful consequences of all our likes and dislikes, of praise and blame, continuously. Whatever there is, the mind is constant in this way.

But for worldly people, if they get blamed or criticized they get really upset. If they get praised it cheers them up, they say it's good and get really happy over it. If we know the truth of our various moods, if we know the consequences of clinging to praise and blame, the danger of clinging to anything at all, we will become sensitive to our moods. We will know that clinging to them really causes suffering. We see this suffering, and we see our very clinging as the cause of that suffering. We begin to see the consequences of grabbing and clinging to good and bad, because we've grasped them and seen the result before -- no real happiness. So now we look for the way to let go.

Where is this "way to let go"? In Buddhism we say "Don't cling to anything." We never stop hearing about this "don't cling to anything!" This means to hold, but not to cling. Like this flashlight. We think, "What is this?" So we pick it up, "Oh, it's a flashlight," then we put it down again. We hold things in this way. If we didn't hold anything at all, what could we do? We couldn't walk meditation or do anything, so we must hold things first. It's wanting, yes, that's true, but later on it leads to //parami// (virtue or perfection). Like wanting to come here, for instance... Venerable Jagaro [*] came to Wat Pah Pong. He had to want to come first. If he hadn't felt that he wanted to come he wouldn't have come. For anybody it's the same, they come here because of wanting. But when wanting arises don't cling to it! So you come, and then you go back...What is this? We pick it up, look at it and see, "Oh, it's a flashlight," then we put it down. This is called holding but not clinging, we let go. We know and then we let go. To put it simply we say just this, "Know, then let go." Keep looking and letting go. "This, they say is good; this, they say is not good" ...know, and then let go. Good and bad, we know it all, but we let it go. We don't foolishly cling to things, but we "hold" them with wisdom. Practicing in this "posture" can be constant. You must be constant like this. Make the mind know in this way, let wisdom arise. When the mind has wisdom, what else is there to look for?

[*] Venerable Jagaro, the Australian abbot of Wat Pah Nanachat at that time, who brought his party of monks and laypeople to see Ajahn Chah.

We should reflect on what we are doing here. For what reason are we living here, what are we working for? In the world they work for this or that reward, but the monks teach something a little deeper than that. Whatever we do, we ask for no return. We work for no rewards. Worldly people work because they want this or that, because they want some gain or other, but the Buddha taught to work just in order to work, we don't ask for anything beyond that. If you do something just to get some return it'll cause suffering. Try it out for yourself! You want to make your mind peaceful so you sit down and try to make it peaceful -- you'll suffer! Try it. Our way is more refined. We do, and then let go; do, and then let go.

Look at the brahmin who makes a sacrifice: he has some desire in mind, so he makes a sacrifice. Those actions of his won't help him transcend suffering because he's acting on desire. In the beginning we practice with some desire in mind; we practice on and on, but we don't attain our desire. So we practice until we reach a point where we're practicing for no return, we're practicing in order to let go. This is something we must see for ourselves, it's very deep. Maybe we practice because we want to go to //Nirvana// -- right there, you won't get to //Nirvana//! It's natural to want peace, but it's not really correct. We must practice without wanting anything at all. If we don't want anything at all, what will we get? We don't get anything! Whatever you get is just a cause for suffering, so we practice not getting anything.

Just this is called "making the mind empty." It's empty but there is still doing. This emptiness is something people don't usually understand, but those who reach it see the value of knowing it. It's not the emptiness of not having anything, it's emptiness within the things that are here. Like this flashlight: we should see this flashlight as empty, because of the flashlight there is emptiness.

It's not the emptiness where we can't see anything, it's not like that. People who understand like that have got it all wrong. You must understand emptiness within the things are here.

Those who are still practicing because of some gaining idea are like the brahmin who makes a sacrifice just to fulfill some wish. Like the people who come to see me to be sprinkled with "holy water." When I ask them, "Why do you want this 'holy water'?" they say, "We want to live happily and comfortably and not get sick." There! They'll never transcend suffering that way. The worldly way is to do things for a reason, to get some return, but in Buddhism we do things without any gaining idea. The world has to understand things in terms of cause and effect, but the Buddha teaches us to go above cause, beyond effect; to go above birth and beyond death; to go above happiness and beyond suffering. Think about it...there's nowhere to stay. We people live in a "home." To leave home and go where there is no home...we don't know how to do it, because we've always lived with becoming, with clinging. If we can't cling we don't know what to do.

So most people don't want to go to //Nirvana//, there's nothing there; nothing at all. Look at the roof and the floor here. The upper extreme is the roof, that's an "abiding." The lower extreme is the floor, and that's another "abiding." But in the empty space between the floor and the roof there's nowhere stand. One could stand on the roof, or stand on the floor, but not on that empty space. Where there is no abiding, that's where there's emptiness, and, to put it bluntly, we say that //Nirvana// is this emptiness. People hear this and they back up a bit, they don't want to go. They're afraid they won't see their children or relatives.

This is why, when we bless the laypeople, we say "May you have long life, beauty, happiness and strength." This makes them really happy, "//Sadhu//!" [*] they all say. They like these things. If you start talking about emptiness they don't want it, they're attached to abiding. But have you ever seen a very old person with a beautiful complexion? Have you ever seen an old person with a lot of strength, or a lot of happiness?... No... But we say, "Long life, beauty, happiness and strength" and they're all really pleased, every single

one says "//Sadhu//!" This is like the brahmin who makes oblations to achieve some wish. In our practice we don't "make oblations," we don't practice in order to get some return. We don't want anything. If we still want something then there is still something there. Just make the mind peaceful and have done with it! But if I talk like this you may not be very comfortable, because you want to be "born" again.

[*] //Sadhu// is the traditional Pali word used to acknowledge a blessing, dhamma teaching, etc. It means "it is well."

So all you lay practitioners should get close to the monks and see their practice. To be close to the monks means to be close to the Buddha, to be close to his Dhamma. The Buddha said, "Ananda, practice a lot, develop your practice! Whoever sees the Dhamma sees me, and whoever sees me sees the Dhamma." Where is the Buddha? We may think the Buddha has been and gone, but the Buddha is the Dhamma, the Truth. Some people like to say, "Oh, if I was born in the time the Buddha I would go to //Nirvana//." Here, stupid people talk like this. The Buddha is still here. The Buddha is truth. Regardless of whoever is born or dies, the truth is still here. The truth never departs from the world, it's there all the time. Whether a Buddha is born or not, whether someone knows it or not, the truth is still there. So we should get close to the Buddha, we should come within and find the Dhamma. When we reach the Dhamma we will reach the Buddha; seeing the Dhamma we will see the Buddha and all doubts will dissolve.

To put it simply, it's like Teacher Choo. [*] At first he wasn't a teacher, he was just Mr. Choo. When he studied and passed the necessary grades he became a teacher, and became known as Teacher Choo. How did he become a teacher? Through studying the required things, thus allowing Mr. Choo to become Teacher Choo. When Teacher Choo dies, the study to become a teacher still remains, and whoever studies it will become a teacher. That course of study to become a teacher doesn't disappear anywhere, just like the Truth, the knowing of which enabled the Buddha to become the Buddha. So the Buddha is still here. Whoever practices and sees the Dhamma sees the Buddha. These days people have got it all wrong, they don't know where the

Buddha is. They say, "If I was born in the time of the Buddha I would have become a disciple of his and become enlightened." That's just foolishness. You should understand this.

[*] In Thailand the word "Teacher" is used as a title of address much like "Doctor" is used in English. "Teacher Choo" is one of four elderly local residents who came to spend the rains retreat at Wat Pah Nanachat, to whom the latter part of this talk was addressed.

Don't go thinking that at the end of the rains retreat you'll disrobe. Don't think like that! In an instant an evil thought can arise in the mind, you could kill somebody. In the same way, it only takes a split-second for good to flash into the mind, and you're there already. Don't think that you have to ordain for a long time to be able to meditate. Where the right practice lies is in the instant we make kamma. In a flash an evil thought arises...before you know it you've committed some really heavy kamma. And in the same way, all the disciples of the Buddha practiced for a long time, but the time they attained enlightenment was merely one thought moment. So don't be heedless, even in minor things. Try hard, try to get close to the monks, contemplate things and then you'll know about monks. Well, that's enough, huh? It must be getting late now, some people are getting sleepy. The Buddha said not to teach Dhamma to sleepy people.

* * *

"...Our discontent is due to wrong view. Because we don't exercise sense restraint we blame our suffering on externals... The right abiding place for monks, the place of coolness, is just Right View itself. We shouldn't look for anything else..."

* * *

Right View -- The Place of Coolness

The practice of Dhamma goes against our habits, the truth goes against our desires, so there is difficulty in the practice. Some things which we understand as wrong may be right, while the things we take to be right may be wrong. Why is this? Because our minds are in darkness, we don't clearly see the Truth. We don't really know anything and so are fooled by people's lies. They point out what is right as being wrong and we believe it; that which is wrong, they say is right, and we believe that. This is because we are not yet our own masters. Our moods lie to us constantly. We shouldn't take this mind and its opinions as our guide, because it doesn't know the truth.

Some people don't want to listen to others at all, but this is not the way of a man of wisdom. A wise man listens to everything. One who listens to Dhamma must listen just the same, whether he likes it or not, and not blindly believe or disbelieve. He must stay at the half-way mark, the middle point, and not be heedless. He just listens and then contemplates, giving rise to the right results accordingly.

A wise man should contemplate and see the cause and effect for himself before he believes what he hears. Even if the teacher speaks the truth, don't just believe it, because you don't yet know the truth of it for yourself.

It's the same for all of us, including myself. I've practiced before you, I've seen many lies before. For instance, "This practice is really difficult, really hard." Why is the practice difficult? It's just because we think wrongly, we have wrong view.

Previously I lived together with other monks, but I didn't feel right. I ran away to the forests and mountains, fleeing the crowd, the monks and novices. I thought that they weren't like me, they didn't practice as hard as I did. They were sloppy. That person was like

this, this person was like that. This was something that really put me in turmoil, it was the cause for my continually running away. But whether I lived alone or with others I still had no peace. On my own I wasn't content, in a large group I wasn't content. I thought this discontent was due to my companions, due to my moods, due to my living place, the food, the weather, due to this and that. I was constantly searching for something to suit my mind.

As a //dhutanga// [*] monk, I went traveling, but things still weren't right. So I contemplated, "What can I do to make things right? What can I do?" Living with a lot of people I was dissatisfied, with few people I was dissatisfied. For what reason? I just couldn't see it. Why was I dissatisfied? Because I had wrong view, just that; because I still clung to the wrong Dhamma. Wherever I went I was discontent, thinking, "Here is no good, there is no good..." on and on like that. I blamed others. I blamed the weather, heat and cold, I blamed everything! Just like a mad dog. It bites whatever it meets, because it's mad. When the mind is like this our practice is never settled. Today we feel good, tomorrow no good. It's like that all the time. We don't attain contentment or peace.

[*] //Dhutanga// properly means "ascetic." A Dhutanga monk is one who keeps some of the thirteen ascetic practices allowed by the Buddha. Dhutanga monks traditionally spend time traveling (often on foot) in search of quiet places for meditation, other teachers, or simply as a practice in itself.

The Buddha once saw a jackal, a wild dog, run out of the forest where he was staying. It stood still for a while, then it ran into the underbrush, and them out again. Then it ran into a tree hollow, then out again. Then it went into a cave, only to run out again. One minute it stood, the next it ran, then it lay down, then it jumped up...That jackal had mange. When it stood the mange would eat into its skin, so it would run. Running it was still uncomfortable, so it would lie down. Then it would jump up again, running into the underbrush, the tree hollow, never staying still.

The Buddha said, "Monks, did you see that jackal this afternoon? Standing it suffered, running it suffered, sitting it suffered, lying down it suffered. In the underbrush, a tree hollow or a cave, it suffered. It blamed standing for its discomfort, it blamed sitting, it blamed running and lying down; it blamed the tree, the underbrush and the cave. In fact the problem was with none of those things. That jackal had mange. The problem was with the mange."

We monks are just the same as that jackal. Our discontent is due to wrong view. Because we don't exercise sense restraint we blame our suffering on externals. Whether we live at Wat Pah Pong, in America or in London we aren't satisfied. Going to live at Bung Wai or any of the other branch monasteries we're still not satisfied. Why not? Because we still have wrong view within us, just that! Wherever we go we aren't content.

But just as that dog, if the mange is cured, is content wherever it goes, so it is for us. I reflect on this often, and I teach you this often, because it's very important. If we know the truth of our various moods we arrive at contentment. Whether it's hot or cold we are satisfied, with many people or with few people we are satisfied. Contentment doesn't depend on how many people we are with, it comes only from right view. If we have right view then wherever we stay we are content.

But most of us have wrong view. It's just like a maggot! A maggot's living place is filthy, its food is filthy...but they suit the maggot. If you take a stick and brush it away from its lump of dung, it'll struggle to crawl back into it. It's the same when the Ajahn teaches us to see rightly. We resist, it makes us feel uneasy. We run back to our "lump of dung" because that's where we feel at home. We're all like this. If we don't see the harmful consequences of all our wrong views then we can't leave them, the practice is difficult. So we should listen. There's nothing else to the practice.

If we have right view wherever we go we are content. I have practiced and seen this already. These days there are many monks, novices and laypeople coming to see me. If I still didn't know, if I

still had wrong view, I'd be dead by now! The right abiding place for monks, the place of coolness, is just right view itself. We shouldn't look for anything else.

So even though you may be unhappy it doesn't matter, that unhappiness is uncertain. Is that unhappiness your "self"? Is there any substance to it? Is it real? I don't see it as being real at all. Unhappiness is merely a flash of feeling which appears and then is gone. Happiness is the same. Is there a consistency to happiness? Is it truly an entity? It's simply a feeling that flashes suddenly and is gone. There! It's born and then it dies. Love just flashes up for a moment and then disappears. Where is the consistency in love, or hate, or resentment? In truth there is no substantial entity there, they are merely impressions which flare up in the mind and then die. They deceive us constantly, we find no certainty anywhere. Just as the Buddha said, when unhappiness arises it stays for a while, then disappears. When unhappiness disappears, happiness arises and lingers for a while and then dies. When happiness disappears, unhappiness arises again...on and on like this.

In the end we can say only this -- apart from the birth, the life and the death of suffering, there is nothing. There is just this. But we who are ignorant run and grab it constantly. We never see the truth of it, that there's simply this continual change. If we understand this then we don't need to think very much, but we have much wisdom. If we don't know it, then we will have more thinking than wisdom -- and maybe no wisdom at all! It's not until we truly see the harmful results of our actions that we can give them up. Likewise, it's not until we see the real benefits of practice that we can follow it, and begin working to make the mind "good."

If we cut a log of wood and throw it into the river, and that log doesn't sink or rot, or run aground on either of the banks of the river, that log will definitely reach the sea. Our practice is comparable to this. If you practice according to the path laid down by the Buddha, following it straightly, you will transcend two things. What two things? Just those two extremes that the Buddha said were not the path of a true meditator -- indulgence in pleasure and indulgence

in pain. These are the two banks of the river. One of the banks of that river is hate, the other is love. Or you can say that one bank is happiness, the other unhappiness. The "log" is this mind. As it "flows down the river" it will experience happiness and unhappiness. If the mind doesn't cling to that happiness or unhappiness it will reach the "ocean" of //Nirvana//. You should see that there is nothing other than happiness and unhappiness arising and disappearing. If you don't "run aground" on these things then you are on the path of a true meditator.

This is the teaching of the Buddha. Happiness, unhappiness, love and hate are simply established in Nature according to the constant law of nature. The wise person doesn't follow or encourage them, he doesn't cling to them. This is the mind which lets go of indulgence in pleasure and indulgence in pain. It is the right practice. Just as that log of wood will eventually flow to the sea, so will the mind which doesn't attach to these two extremes inevitably attain peace.

* * *

Epilogue

...Do you know where it will end? Or will you just keep on learning like this? ... Or is there an end to it?... That's okay but it's the external study, not the internal study. For the internal study you have to study these eyes, these ears, this nose, this tongue, this body and this mind. This is the real study. The study of books is just the external study, it's really hard to get it finished.

When the eye sees form what sort of things happens? When ear, nose, and tongue experience sounds, smells and tastes, what takes place? When the body and mind come into contact with touches and mental states, what reactions take place? Are there still greed, aversion and delusion there? Do we get lost in forms, sounds, smells, tastes, textures and moods? This is the internal study. It has a point of completion.

If we study but don't practice we won't get any results. It's like a person who raises cows. In the morning he takes the cow out to eat grass, in the evening he brings it back to its pen -- but he never drinks the cow's milk. Study is alright, but don't let it be like this. You should raise the cow and drink it's milk too. You must study and practice as well to get the best results.

Here, I'll explain it further. It's like a person who raises chickens, but he doesn't get the eggs. All he gets is the chicken dung! This is what I tell people who raise chickens back home! Watch out you don't become like that! This means we study the scriptures but we don't know how to let go of defilements, we don't know how to "push" greed, aversion and delusion from our mind. Study without practice, without this "giving up," brings no results. This is why I compare it to someone who raises chickens but doesn't collect the eggs, he just collects the dung. It's the same thing.

Because of this, the Buddha wanted us to study the scriptures, and then to give up evil actions through body, speech and mind; to develop goodness in our deeds, speech and thoughts. The real worth of mankind will come to fruition through our deeds, speech and thoughts. But if we only talk well, without acting accordingly, it's not yet complete. Or if we do good deeds but the mind is still not good, this is still not complete. The Buddha taught to develop fine deeds, fine speech and fine thoughts. This is the treasure of mankind. The study and the practice must both be good.

The Eightfold Path of the Buddha, the path of practice, has eight factors. These eight factors are nothing other than this very body: two eyes, two ears, two nostrils, one tongue and one body. This is the path. And the mind is the one who follows the path. Therefore both the study and the practice exist in our body, speech and mind.

Have you ever seen scriptures which teach about anything other than the body, the speech and the mind? The scriptures only teach about this; nothing else. Defilements are born here. If you know them they die right here. So you should understand that the practice and the

study both exist right here. If we study just this much we can know everything. It's like our speech: to speak one word of Truth is better than a lifetime of wrong speech. Do you understand? One who studies and doesn't practice is like a ladle of soup pot. It's in the pot every day but it doesn't know the flavor of the soup. If you don't practice, even if you study till the day you die, you won't know //the taste of Freedom//!

Notes on selected talks

1. //On meditation// -- an informal talk given in the Northeastern dialect, taken from an unidentified tape.

2. //The Path in Harmony// -- a composite of two talks given in England in 1979 and 1977 respectively.

3. //The Middle Way Within// -- given in the Northeastern dialect to an assembly of monks and laypeople in 1970.

4. //The Peace Beyond// -- a condensed version of a talk given to the Chief Privy Councillor of Thailand, Mr. Sanya Dharmasakti, at Wat Nong Pah Pong, 1978.

5. //Opening the Dhamma Eye// -- given at Wat Nong Pah Pong to the assembly of monks and novices in October, 1968.

6. //Convention and Liberation// -- an informal talk given in the Northeastern dialect, taken from an identified tape.

7. //No Abiding// -- a talk given to the monks, novices and laypeople of Wat Pah Nanachat on a visit to Wat Nong Pah Pong during the rains of 1980.

About the Author

Venerable Ajahn Chah (Pra Bhodinyana Thera) was born into a typical farming family in Bahn Gor village, in the province of Ubol Rachathani, N.E. Thailand, in 1917. He lived the first part of his life as any other youngster in rural Thailand, and, following the custom, took ordination as a novice in the local village Wat for a number of years, where he learned to read and write, in addition to some basic Buddhist teachings. After a number of years he returned to the lay life to help his parents, but, feeling an attraction to the monastic life, at the age of twenty he again entered a Wat, this time for higher ordination as a //bhikkhu//, or Buddhist monk.

He spent the first few years of his //bhikkhu// life studying scriptures and learning Pali, but the death of his father awakened him to the transience of life and instilled in him a desire to find the real essence of the Buddha's teaching. He began to travel to other monasteries, studying the monastic discipline in detail and spending a very brief but significant time with Venerable Ajahn Mun, the most outstanding meditation Master of the ascetic, forest-dwelling tradition. Following his time with Venerable Ajahn Mun, he spent a number of years traveling around Thailand, spending his time in forests and charnel grounds, ideal places for developing meditation practice.

At length he came within the vicinity of the village of his birth, and when word got around that he was in the area, he was invited to set up a monastery at the //Pa Pong// forest, a place at that time reputed to be the habitat of wild animals and ghosts. Venerable Ajahn Chah's impeccable approach to meditation, or //Dhamma// practice, and his simple, direct style of teaching, with the emphasis on practical application and a balanced attitude, began to attract a large following of monks and laypeople.

In 1966 the first westerner came to stay at //Wat Pa Pong//, Venerable Sumedho Bhikkhu. From that time on, the number of foreign people who came to Ajahn Chah began to steadily increase, until in 1975, the first branch monastery for western and other non-Thai nationals, //Wat Pa Nanachat//, was set up with Venerable Ajahn Sumedho as the abbot.

In 1976 Venerable Ajahn Chah was invited to England together with Ajahn Sumedho, the outcome of which was eventually the establishment of the first branch monastery of Wat Pa Pong outside of Thailand. Since then, further branch monasteries have been established in England, Switzerland, Australia, New Zealand and Italy.

In 1980 Venerable Ajahn Chah began to feel more acutely the symptoms of dizziness and memory lapse which he had been feeling for some years. This led to an operation in 1981, which, however, failed to reverse the onset of the paralysis which eventually rendered him completely bedridden and unable to speak. However this did not stop the growth of monks and laypeople who came to practice at his monastery, for whom the teachings of Ajahn Chah are a constant guide and inspiration.

TEISHO John Tarrant Roshi October 20, 1990

Oakland, California "TO BE AT EASE IN ALL CIRCUMSTANCES"I'd like
emphasize today the value of insight and differentways it emerges in zen training. The koar
atradition of insight. I don't know about you, but that is whatattracted me to the training in th
place. Handed downfrom the beginning there was this great way of seeing that freesus. Ou
impermanent. Everything we hold onto isalways being snatched away. You may notice tha
you really want and you struggle to get it, and thenyou get it. A good analogue for some pe
something like anew car or a new house. You struggle and struggle to get it. People plan ar
decide which car to buy and then theybuy their new car and it's just another new car. Just a
in your life. There it is. Impermanent. Another piece ofmetal. We all know that experience
Unless we makethem so, our lives do not flower. Unless we fully experiencethem, our lives
pieces of metal.Sung ten's (sp???) teacher, Yuan-wu (Engo). His teacher was Fa-yen. He
and said: I avoid experiencing something. Fa-yen said: Please explain that to me; w
have experienced. He explained it to him. Fa-yen said: Yes, it's as I feared. You
do not understand. Engo got pissed off about this and he left in a huff. Before he lef
his teacher said: Remember me when you are sick with fever. Engo said: Yeah, sure
left. One day he did become sick, very sick, and he remembered Fa- yen's words. The
was of that kind that shakes you to the very core and makes you reassess your life and y
certainties. After he had convalesced he went to Fa-yen and studied with him for a long t
sacrifice our time and we come together to sit. This is agood thing, a great thing to do. This
will get usthrough the hard times and the good times.The koan tradition started out with stu
askingquestions in public and the teacher would answer them. Sometimesthe dialogue wou
little while and then it wouldstop. The students would ask things that seemed to be a decen
formulating the question. Traditional questions wereoften things like, `what is Buddha?,' or
Bodhidharmacome from the west?' And the teacher would say something helpfullike, `the o
garden,' or `three pounds of flax.' And every now and then a student's mind would be opene
then the student would become the oak tree and understandcompletely what was meant. S
because theywere found to be particularly helpful, because they seemedunusually resonant
passed down. Yun-men's(Unmon) speech was so fine that he forbad his students to writeit

might concentrate on remembering or tellingsomebody else about what he was saying rathe
We have his koans because his tanto disobeyed him and wore apaper robe and scribbled th
robe. Gradually thekoans were and passed down and collected and have been with usfor o
years, which in human terms is quite a longtime.One thing that makes a good koan is that it'
to gethold of. It's intriguing and interesting, but you can't quiteunpack it. It doesn't immediat
reveal itself to you so yourdoubt and sense of mystery begins to collect around the koan. All
difficulties get poured into the koan, which is what itis for. It is through this that we open the
our ownliving. When we really become one with the koan, we begin toenter our own lives so
are no longer ghostsclinging to our old concepts thinking we know how the world worksand
those ideas rather than directly. When weunderstand the fleeting quality of life and there's n
weeven wish to change that. Whatever we hang onto will be snatchedaway. We all know th
we love it; however wellwe behave, even if you practice special breathing exercises, itwill sti
snatched away. Even if we take homeopathicmedicines; even if we are made a full partner,
besnatched away.At first that is an occasion for something like terror. I thinkthat terror, perh
is what brings us to the practice initiallywhether we know it or not. But as the practice deepe
thinkwe are not so afraid or so terrified. There's something like joyin that fleeting quality, too
we live each moment withinits beauty, we understand it to the core and it is easy to loveeach
is easy to get up in the morning full of joy. It is easy to embrace and welcome the others who
gettingup in the morning. All our companions of the way from the treesto our friends in zen.
the trees, the birds and theweather all come into being all over again at the beginning ofthe
at first, I think, people sat with sayings of koans they madeup themselves and gradually thro
to insight. Thenthe koans became a measure of the impact of the insight. I knowof no other
that has a language in which we can talkabout the fine movements of the Tao after enlighter
is the distinctive vehicle of consciousness and ofawareness. The koans, which at first seem
andindigestible and, in fact, are awkward and indigestible, turn outto be the great highway m
the road. To have thelanguage, to be able to speak with it, to wrestle with theaccuracy of ou
with the teacher, allows us to deepenour insight in a way that is not otherwise possible. This
thesense in which we all hold each other and all help each other. The original development
work was actually acollective project of all deeply sophisticated human matters. Noone pers
responsible for it. We all shared it.Harada Roshi, Dai'un Harada, who was one of the most
importantrecent Japanese teachers of the koan tradition in the west sincemany of the weste
run through him, used to saythe best way is to hold somebody for forty years. No matter wh
student turns you block him or her. No matter how wisethey are you tell them it's not good e
the timeforty years is arrived a great wave of enlightenment comes andoverwhelms everybo
student's path including the teacher. He said that few students and teachers knew this and h
for it anymore. We do it the second best way. He saidthere were many worse ways, but the
was to bringthe student along gradually opening and opening and opening andopening until
the student was completelyopened, which is the same. He still didn't think it was as good,bu

got to the same place. It's true we work thatway. There's a little bit of both in the way we wo
holdourselves, particularly in the beginning and one of the teacher'sjobs is to hold the studen
against the question. This meansto value the question, to honor the question, the great que
core of our lives.One of the things I have noticed about the solutions that peopleadopt in the
is that usually they have not takensufficient care over the question. Very often people are
solvingsomething without finding out what the problem is. The koantradition makes us sit wi
until this matter becomesclear. This is true in commonplace matters as well as mattersthat a
to do with the dharma. It's amazing howquickly we want to go running off to solve a problem
howunwilling we are to just be with the problem until something getsto work in it. We consid
begins to show itself. Whenwe have a problem, it just means we're not in the Tao in thatpar
that particular time. The traditional zen wayof handling that, of course, is just to immerse ou
theproblem, to return in that way to the Tao and then the problembecomes clear. We may n
it's not a problem anymore.One interesting thing about this is that zen always brings upyour
inferiority. A good zen path always brings up your sense ofyour own incompetence and you
either depression oranger about that according to circumstances. People either getangry wi
or the leaders are usually popular targetsor with the teacher or who knows? The method, th
somethingwrong with the method. Really, we should be wearing red. Thisis not such a bad
comes up. It means thatsomebody's alive in there; the spirit is still there; the fightis still in th
in their being. Over and over again we have toreturn to the treasure that is not in outside ob
notin the leaders or in the teacher or in the great teachers of thepast. Each of has his or her
practice to follow and theintegrity with which we follow that is the important thing. Theintegri
when the mind wants to stray, the mind wants toblame somebody else or blame oneself, for

2. The Eightfold Path: Right Attitude

~~~~~~

So one has decided that spiritual practice is worthwhile for some reason. That doesn't mean that we have to go off in a monastery, but our household life, our driving, our interpersonal relations, they are our practice, and they require some working with. The next level or the next step in this is Right Attitude or Right Thought. One sees the value in inner life and sees that frankly our happiness is based on our heart considerably more than it is on external circumstances. When there are difficulties around, if the heart is open or clear or understanding, we can be happy. We can be in the midst of beautiful circumstances and be miserable, be lonely or depressed, and know that our happiness which we seek is really a function of our heart, our interior life.

The Dhammapada begins with:

> Mind is the forerunner of all things." If you act based on kindness and wisdom in the mind, happiness will follow you like the wheel of a chariot follows the ox which draws it. And if you act based on unkindness or you act from an unwise state of mind, then unhappiness follows just as the wheel of the cart follows the ox which draws it.

There are three aspects to Right Attitude. The first is openness or receptivity. In undertaking our practice, try not to make it a certain way: "I want it to always be peaceful, I want it to be calm, I
~~~~~~

want not to be angry" or "I want my body not to hurt" or "my knees" or "I don't want to be restless" or "I don't want to be afraid" or "I want to come to a lot of light or joy." Good luck! You get that sometimes. But if you just look for that, what will happen in your daily practice? A really simple thing happens if you're looking for that. What happens? You're disappointed. And then what do you do? You stop sitting. If you hold in mind how your personality should be or how your body should behave or how your mind should be, does it listen to you very much? Tell the truth! You sit here and say, "Thoughts, don't come." Does it help much? A little bit with some training, but just a little. It's like the radio. The advertisements come, and you can't say, "I want radio without advertisements." It doesn't work.

You might have begun some investigation or awareness of what your personality is like. Most people when they start to look at their personality, after a little while say "yuk" because personalities have that kind of quality to them. You say "God, maybe if I practice hard, my thoughts will quiet down and I can kind of change my personality." I have news for you! Your personality is kind of like your body; you come in and you get issued one for this ride. And you can get wiser or kinder, but you kind of have it, and you'll be a wise character of the same personality that you are as an unwise one, but you'll be pretty much the same. Or you'll be a loving person, whatever you are now, however you define yourself.

Openness means not getting caught on, "I want it to be quiet or peaceful, the body or the mind to be this way," but more a quality of discovery, of experimenting, of seeing what you are. "I'm going to sit and listen to my heart and see what I really care about or where I'm afraid or what I hold back on. I'm going to look at my mind and see what the patterns are, what the desires are, and see what makes me happy and what makes unhappiness, and how that works in the world."

There are enormously rich and deep things to discover in our practice. It requires this attitude of, "I'm going to look and learn," rather than, "I'm going to make it a certain way."

There's a beautiful poem I'll read from the German poet Rilke. He says:

> Sometimes a man stands up during supper
> and walks outdoors and keeps on walking
> because of a church that stands somewhere
> in the East. And his children say blessings
> on him as if he were dead.
> And another man who remains inside his
> own house, stays there inside the dishes
> and in the glasses, so that his children
> have to go far out into the world
> toward that same church which he forgot.

Such a wonderful poem. There's something in us, in our nature, which compels us to discover. I remember a very powerful moment with the old guru who I studied with, Nisargadatta Maharaj, who taught the way of Nisarga Yoga. "Nisarga" means natural. The basic translation of his name was "Mr. Natural". He was this 80-year old cigarette-smoking man. He had a little cigarette stand. He was kind of a combination like Krishnamurti and Fritz Perls. He would put you on the hot seat when you came in and ask you about your spiritual life.

One day we were in a room about this big. People were coming in and asking questions. Somebody came in and asked a question and was a little bit dissatisfied and left. And another person raised their hand and said, "Maharaj, what will happen to that person who came and asked that question and left? Is it all over for them in this life? They didn't stay here. You are a great guru, and they weren't interested, and they went home." And he twinkled at that moment, he really lit up, and he said, "It's too late. Even the fact that they put their foot in this room, even if they hadn't asked the question, means that somewhere in there there's a seed of really knowing who we are and what this life is about. Not what you were taught in elementary school or what's on TV or the newspapers, but a deep seed of knowing our true nature, that wants to discover; it's like coming

home. The fact that he just walked in the room means that that seed has started to sprout. And no matter if he tries to forget it and goes back and gets lost, sooner or later that will manifest in awakening."

We can't not do it once we start. Trungpa Rinpoche in speaking with his students at a big public talk one night said, "Frankly, I recommend that you don't start the spiritual path because it's painful and it's difficult; it's really hard. So my recommendation to all of you is not to do it. You can leave now." Then he said, "But I have a second recommendation, and that is: If you start, you better finish. If you begin, then really do it."

It's something in us. I think it's the part that loves truth, or maybe it's the part that loves connection with another being. Even if we're terrified of intimacy - some of you may know that one - or we're terrified of getting close and then losing things, or we're afraid of dying, or it's hard to look at parts of ourself, there's something in our heart that really wants union, that wants to connect with people, with life, with the world around us in a deep way.

And openness then, the first part of Right Attitude, is this process of discovery, of seeing what's here and opening to it, not trying to change it but seeing clearly with mindfulness, without judging our fear, loneliness, aggression, joy, happiness, love, sorrow; our body, how we use it, how we exercise with it; what we eat, when we're full, when we overeat. The beginning is just this quality of discovery, because it's fantastic then. That makes spiritual practice alive; it's not some rote imitation. Then we can begin to learn, and we learn about the forces of desire, of fear, of wanting, of love, that makes the whole world go round, and really runs our lives. Whether we're conscious or we're on automatic pilot, they still operate. We start to discover who we are and how it works.

This leads to the second part of Right Attitude, which is renunciation. There is a saying in India, "When a pickpocket meets a saint, he only sees the saint's pockets." What we want determines what we see.

If you walk down the street and you're hungry, what do you see? Restaurants. "There's a Greek restaurant. I could have feta cheese or a nice salad. Oh, there's a nice natural food restaurant. No, I think I'll have a burger. That's a good place for burgers." You don't see shoe stores. Or if you come to the sitting and you look around, there's break time, time for tea, you see what you're interested in. If you like to talk to women, you'll see the women. If you're interested in sex, you see people who are attractive to you or your competition for those people. If you're interested in astrology you kind of check out and see whether there are lots of water signs or fire signs that come sit. If you're interested in young people or old people, that's what you scope out. If you're a barber, you come in here and see who needs a haircut.

What you're interested in determines and limits what you see. What renunciation means is putting what we want aside for a little bit. At Achaan Chah's, where I studied in the forest monastery for awhile, we did a lot of work with a practice of the monks' rules as discipline, and there are hundreds of them. At first they seemed like a real pain in the ass. As I learned to work with them, work with the discipline of not eating after noon, or sitting in a certain kind of posture when you were with senior monks -- there's a whole lot of ritual around it -- it required a lot of surrender. And as I did it I said, "I want to do it my way. This is 2,000 years old and it's dumb, and it's modern times," and all kinds of resistance came up. Of course, I didn't have much choice. I was a monk and I was supposed to do it. I mean, if I had stopped, I suppose I could have left or something. "Alright, I'll do this trip." But I had all the resistance, and all the things of not wanting to follow rules or not wanting to go against my habit. We're spoiled in this country. You can drink whatever kind of beer you want, eat whatever kind of food, travel where you like, and we have a capacity to change our lives in ways that most people in the world don't come close to.

So here it was, renunciation. What came from it was a discovery that there's a strength of heart that comes when we don't just follow our habit; and it brings a sense of well-being or purity or something,

because we begin to train ourselves. We don't have to follow all of our habits and all of our desires.

Achaan Chah was great because he would psych you out when you came there to begin practice, and if you were someone who loved to meditate and loved it peaceful and quiet, he would assign you to the monastery in the middle of Bangkok, in the traffic. And if you loved to socialize and talk and be with people, he would send you off to where everyone was in separate caves, and you had to deal with your loneliness or your aloneness. The style of practice which really is relevant to our lives, is to look into that which we're afraid of, which we run away from, or which keeps us moving all the time.

It requires a little fire. Practice has fire. If it doesn't have fire, it's not interesting. Yeah, you sit and you hold hands at dinner and you do a little "Om" and it's kind of peaceful, and you eat. It's not very interesting. If there's fire, it transforms your body, it transforms your heart, it makes you feel your loneliness and your desire, and you look at places where you hold tension in your body, and what it means to be unhappy or to be happy, to look at your suffering, to look at your expectations -- that's juicy, that's interesting, and that's where liberation comes.

The second step is renunciation. It means beginning to work with areas of our life where we've been unconscious and which we can identify.. I mean, I could go around the room and just ask you, and you could all name off the things that could use a little work, not that they're bad or anything, but because you can empower yourself through it.

Let's take a moment now and think of an area to work on this next week, maybe a very small one. It might be a simple a thing such as biting your nails. Think of one thing for yourself that you really want to look at and discover more about, that you're caught in -- it's a habit, it's a compulsion, or a fear, or whatever. Do you have one? I'm sure you must be able to think of one. Okay, fine. Here I want to give an assignment which you're welcome to do. If you're the kind that resists assignments, please don't do it. The assignment of

working with openness is to just look at it for one week. Make the resolve in your mind, whether it's nail biting, or being afraid of this, or compulsive about that, whatever it happens to be that you choose, that for one week you're going to be a botanist, and you're going to study it, when it comes out, is it a night creature or a day creature, what it's mating habits are, and what it eats, and how long it's there. So you're really going to study it. First you'll see the superficial nature of how often it comes. Count it for a day, whatever it is. It might be a mental state or an activity. See how often it comes. Then start to look deeper. See what's there when it comes. When you bite your nails, when you pay attention to your heart and your mind, you see, "Oh, I start biting them when I'm afraid. Alright now, what happens? I'm afraid. What's there with the fear? Oh, I get lonely. Maybe that's what it is." So you see it's loneliness, and then fear, and then chomping away, or whatever it is that you're examining.

So let yourself take a week and go from the activity itself, really seeing how often it comes, and what it's like, and also look at the heart and the mind under it, and see if you can discover the mental states that come, and see how they come and go. Let it be a practice of a deeper insight than that. You see the content, you see the sources of it in your feelings, and then you also see how the action and the mind states come like clouds for a little bit and then they pass away.

That's your assignment, to study it for one week. Then the second week's assignment, which I'll give you tonight in case you don't come next week, is to stop it for just one week, whatever that particular thing is, either the outer activity or the inner one if it's there.
Try to stop it and watch what happens when you stop it, not that it's bad or you're going to get rid of it completely, but then make your observation and your experiment to see what mental states and what experiences come when you don't do that. Does this give you some sense of what I mean by "fire" or being willing to work with yourself? It's discovery; it's not that bad. You may do it for the rest of your life, but you can begin to sense this capacity of inner strength, of directing your attention, concentrating your mind, and seeing with

more clarity. We start with little things and we see how we're bound. It's really the question of bondage and liberation, from biting your nails to the deepest inner things. We can start to see what it is that creates bondage, and that to discover this resource we have to be freer inside.

We become, as Ram Dass put it, connoisseurs of our neurosis. It's not that the neurosis goes away necessarily, but you have, "Wow, look at that example. Isn't that fantastic! I really did it that time." And there's a sense of humor that you can bring to it. When you observe, after awhile either there comes despair or humor, depending on which you want to pick. After awhile you get tired of despair, and you see, "My God, there it goes again."

The first thing in Right Attitude is openness; that it's not a thing of "I'm going to perfect myself and make a perfect personality and a perfect body and a perfect mind." I don't know anybody like that. But it's a quality of really discovering and opening. And the second is a willingness to work, not to just follow our habits, but to put ourselves into it a little bit, to put some effort out, renunciation. And the third is the quality of non-harming, or loving thoughts, and how to evoke that, how can we bring this quality of loving thoughts, how can we evoke that quality in our spiritual life, which means becoming more conscious of what we do in what we do.

One way is to see the events that come to us as gifts, especially the difficult ones; not necessarily as good gifts, but gifts. Don Juan calls them "challenges."

One way to really discover this quality of love is to see that we've got a big playpen. I'm getting into baby metaphors these days. You have to understand it's my new conditioning. We have a big playpen and a lot of toys, some of which are hot and they burn, some of which are cold, some are pleasant, and some aren't. Our life is limited; we're born, we're going to die. Nothing will stop that. No matter how fast we run, or how much we jog, we're going to die anyway. Because it's limited, it makes it interesting to experiment with. Let's learn in this time that we're here; let's really look at it.

It's hard, because it's easy to love kittens and puppies, babies when they're not crying, and pleasant experiences. That actually doesn't have much to do with love. That's kind of an ease of mind or sentimentality or something. I think, really, love manifests when things get difficult. That's when you really know it. That's when the fire melts whatever barriers we have in our heart. Our hearts want to be melted. The pain isn't so bad. It's much better to have that all happen than have it all still, solid and barricaded.

What love requires in practice, this quality, is "constancy" -- Suzuki-roshi's word.

St. Francis de Sales says:

> A cup of knowledge, a barrel of love and an ocean of patience.

In a way this quality of love and patience are so related. Our practice will go through cycles. Sometimes you sit at home and it will really nourish you, and you'll feel rested afterwards; other times you'll sit down after a busy day and the body will be tight and the mind will be spinning, and you'll be hating this person, and worried about that, and you don't want to feel it, and you don't want to look at it. Feel it, look at it; work to nourish that quality of constancy, of what's called, "a long-enduring mind." It's not a short game. You know, we're used to instant food, drive-through, tell the lady through the speaker, "Yes, I'd like a Big Mac, fries and a coke," or whatever it is. You drive around and you get it and you can eat it while you're driving; you don't even have to stop. Instant gratification. This is not an instant gratification thing. It is the longest thing you'll ever do because it's your whole life. It's really to discover how to transform your life from being on automatic pilot to being conscious, to discovery, to play. And it's wonderful. So it means that you don't complete it, you actually learn how to play the game and make your life into that.

It has many cycles. There will be many times when it's hard to sit,

maybe more than when it's easy. And even in the good moments they'll come. You know what happens when something is really sweet and good, a wonderful taste, a great sexual experience, a good concert, a piece of music, or some wonderful sitting? What happens? There's this little voice that comes in the middle. What does it say? "It won't last. Can I get it to stay? How much longer?" There's that worry even in the middle. We can't kind of enjoy it because there's that thing inside that tries to grasp it.

Wisdom is also this development of patience or love or constancy, that you go through so many cycles.

I'll read you a poem from Gary Snyder called "The Avocado".

> The Dharma is like an avocado.
> Some parts of it so ripe
> you can't believe it it's so good,
> and other parts hard and green
> without much flavor,
> pleasing those who like their eggs
> well cooked.
> And the skin is thin,
> the great big skin around the middle
> is your own original true nature,
> pure and smooth.
> Almost nobody splits it open
> or ever tries to see if it will grow.
> Hard and slippery it looks like you should plant it,
> But then it shoots through the fingers and gets away.

We grasp it sometimes, or we touch it, we touch something really deep, and it's beautiful and it's tremendously important. Then what happens? Bleep. Slippery seed. That's fine. You pick up the avocado seed again, or you plant it, or maybe make a garden of avocado seeds, avocado trees.

As I speak I'm trying to translate the talks and concepts that I've

used so often in intensive retreats to try and find ways to really make them applicable in our situation of jobs and families and driving, and all the rest of it. I did a radio show today on KCBS which will be on in a couple of weeks. And at the end of it I taught a driving meditation, knowing that people listen to the radio when driving. "Don't close you eyes. Hold the steering wheel. Now relax. That's right." It was great fun. But that's the quality of beginning to make what we do our practice, through this openness or discovery rather than some ideal that's spiritual; through some willingness to renounce or a little fire, and finally through a tremendous amount of patience or constancy.

Here's another exercise I want to give you. Pick one day next week, and maybe next time we'll have a little pairing at the end and see who did it and just share with one another in a pair what you discovered. Pick one day next week and see how many moments of impatience you can count. Even if you get to 500, don't judge them, don't try and make them go away, but in one day of your life see how many times you can count impatience, 50, 200, 500. We'll have a contest. The person who comes with the most moments of impatience they saw in a day will get a prize.

Patience can even be used to understand impatience, because if you look at it, you start to see what's there when you feel impatience. We discover love by looking in places where it's not. Actually, we discover deeper or truer love. Don't look at what's romantic. Forget that part. Look at where it's hard, and you can really learn about love.

Do the exercise. I'll give you a little bit of a hint. You get impatient when the kind of experience is happening that's unpleasant, when it's painful, when there's some experience of body or mind that hurts a little bit. For the heart to open you have to be willing to feel pain, joy, pleasure, hot, cold, the whole thing. When you open the door, what do you get coming in? You get what's there. And if you open the heart, you get the experience of what our humanity is, what's rich. You can't open the heart for pleasure and not feel the pain. The world is dual; it's up/down, light/dark, hot/cold, and when

we open, we discover a kind of capacity for joy and for understanding which allows for the fact that life has pleasure and pain. It's got them both. If you don't want pain, go to another planet, because this one has light and dark, sweet and sour, hot and cold, and pleasure and pain. That's the game.

If you want your heart to open, study your impatience. It's a fantastic place to look. Count it through a day, and just see what the things are that evoke it as you look. Don't try and change it. There are wonderful things you can learn from it.

This is from the Sufis again:

> Overcome any bitterness that may have come
> because you were not up to the magnitude
> of the pain that was entrusted to you.
>
> Like the mother of the world
> who carries the pain of the world
> in her heart, each one of us is
> part of her heart and therefore
> each is endowed with a certain measure
> of cosmic pain.
>
> You are sharing in the totality
> of that pain and are called upon
> to meet it in joy instead of
> self-pity.

It's not a judgment but rather realizing we have this capacity, we have a beautiful capacity to suffer, and we have a beautiful capacity to love, and we have a beautiful capacity to open to the richness of our experience which has all that in it -- what's joyful, what's unpleasant -- so that the attitude of practice is like a flower blossoming. You started, so it's happening anyway, but you can help it. You can give it a little plant food or you can water it. By sitting every day you water it, and the plant food and the nourishment

comes from the sangha, from coming together, from listening to the Dharma and discussing it, and getting those extra kinds of nutriments that help you when you work in your daily life.

If we do that, then we can find the dharma that's true. We can work with it in traffic on Highway l0l, in our kitchen, with our children, in our office, and in the times of our inner solitude, and then things really do become rich and wonderful.

I hope I wasn't too preachy tonight. I speak in a way to remind myself of these things that just make it a lot better to live. It's not that you should do it, but these are just laws of what makes life richer or happier in some way.

I want to close by telling one more story. The story, which to me is a wonderful illustration of openness, is of a physician, Larry Brilliant, who was involved in a campaign to put an end to smallpox in the world. He was working in the villages in Nepal and India. Almost everyone had been inoculated. There were a few small areas where it still existed. They had to go in because if they didn't, then it would spread, and the whole thing would start all over again around the world. There's blindness that comes from smallpox and in some cases terrible disfiguration and brain damage. So it was really a very important thing.

They went to this village and the villagers refused to be inoculated. They said that smallpox came from God, and God brought both disease and life, and that that had to be honored as it came. Here's this guy, Larry Brilliant, who's a very devoted spiritual person, and here are these people saying it's from God, and he has to make some choice. He and the people with him say, "God or not, we don't want another l00,000 children in the world next year to be blinded by smallpox." So they went into the village at night with their jeeps. They first went to the house of the chief, and the doors were barricaded. They broke the doors down, and they went in with nurses and doctors, and they wrestled the chief and his wife to the floor -- she was apparently tougher than the chief -- and they gave them their shots. They were screaming and saying, "No, no," and

whatever, and for him it was terribly traumatic because his values had been that you respect the religion of all people, and so forth. Working in spiritual practice, it's not so black and white, it's not so easy. I'm sure you have seen that, haven't you? Making choices.

Then what happened after that? Already that was difficult. So they're sitting there, and after inoculating the chief and his wife and the family, then the village was easy to inoculate. The chief goes out to his garden -- very small garden, it's a really poor village -- and picks a couple of squash, some of the few vegetables that are in the garden, and brings them in and hands them to the doctors, and says, "I would like to give these as a gift," and then starts to prepare a meal with the very little they have, and they're astonished. They say through the translator, "Why is he doing this?" And the chief explains. He said, "You came to my house. It is my religious belief that smallpox is a gift from God, among the many things in this world, and following my religious belief in my heart, I had to resist you. It is your belief that it is the best thing in the world that everyone be inoculated. Following your belief, and given the fact that there were more of you than there were of us, you inoculated us. Defeat is no shame! Now you are a guest in my house and I would like to treat you as such."

As he tells the story it was one of the most wonderful awakenings in his life. It was the kind of awakening to see that you are in a difficult situation. To live is difficult, and we're always in these binds Can you stay open, can you discover what's new? Can you allow the people around you to do surprising things? Can you yourself do surprising things?

ÉÍÍÍ

ignorance.

I have come here to share with you the Buddhist perspective and how its fundamental ideas and practices can benefit individuals and our society at large. Buddhism and its teachings respects all other religions and in fact, in Buddhism, it is a transgression to speak ill of anybody or a group of people or their philosophical or religious ideas. Condemning other people or their religion is considered non-religious conduct and is an idle-talk which is one of the ten non-virtues deeds one must abandon. There is no devil outside other than one's own inability to accept and respect other religions. There is no external god other than the kindness and compassion that can flow through us to other living beings. A mother dog who shows her kindness to her puppy is a much better example of compassion foe one to emulate than propagating teachings which discriminate against colour, race, religion or gender. If one religion cannot tolerate another how can it teach to tolerate anything in this world? Religious intolerance and narrow-mindedness among Church and religious leaders have let down many of their adherents who call themselves "free thinkers". These are not the benefits of religious practice but the failure to understand and practise religion. Over the years I have met many people who wish to be identified as "free thinkers" rather than belonging to any religious denomination. Many regard religion as that which narrows their thinking and limits their freedom to reason. Many modern thinkers, who have otherwise distanced themselves from strict religious dogma have become attracted to the Buddhist way of life and its powerful ideas, have regarded Buddhism as a way of life rather than a religion. Many Australians I have known, who consider themselves as Buddhists have become interested in Buddhism and have adopted its non-pressured approach to life, mainly because they do not have to believe in things they have not examined and experienced themselves. They are taught to think for themselves rather than have a blind faith in something and are not even allowed to think of it logically. They are encouraged to find a safe way for themselves rather than accept the one and only ready-made highway. There is no one highway to enlightenment, but there are different footsteps of past masters we can follow if we wish. Learn from everybody and every circumstance and take what it means most to you, but let us not be over-ambitious and try to make a highway to lead

everyone. This is how the seeds of religious fanaticism are planted.

Several years ago there was a big inter-religious conference in London which was represented by all major religions. Buddhism was represented by a Sri Lankan monk. The conference was held in a beautiful Church and most of those attending were Christians. All the speakers sat on the stage and the Sri Lankan monk who was the smallest in physical size was asked to speak first. The first remark he made was nothing but a few minutes of total silence and the people in the audience thought he was not going to say anything and the Master of the Ceremony acted rather anxiously. Then the monk smiled towards the Master of the ceremony and nodded as if he was going to say something after all and then he said: "I am sorry, Ladies and Gentlemen, there is no God".

Well, I am not going to repeat it here but such comments do raise questions as to what Buddhism is all about and the role of Buddha for Buddhists. To be frank Buddha was a great critic of the idea of creation of the world by some supreme God-Head and the idea of the original sin and eternal heaven and hell. To the Buddha, most important thing was "now", the present moment and how we go from here rather than what happened in the past and what might or will happen in the future. Past is gone and future is not yet due except what we are creating now. He did this not out of believing in some theory but examining it for himself through analysis and rationality.

Buddha came up with four fundamental principles which he thought was universal to all human problems. Even to his most faithful disciples, the Buddha after his enlightenment, warned of the danger of "blind faith" and asked them not to believe everything what he said just because he taught them. He emphasised the importance of individuals to test and examine the authenticity of his teaching through personal experience, not through mere belief.

These four principles are called the four Noble Truths. The first is called the Truth of Suffering (Dukkha Satya). When people face suffering in their lives, the first thing they do is deny it, reject it and worst of all they try to avoid it. This he said was the obvious reason why we suffer in life, because we fail to see the truth, the

meaning and its purpose of suffering. Although nobody desires suffering, they always get it, not because of the suffering itself, but because they fail to apply the correct antidote to the problem. He explained that people fail to apply the antidotes to their suffering, not because they do not want to but because they do not know the causes of the suffering. We think that the cause of our problem is something or someone outside us and this, he says "is barking up the wrong tree" as the saying goes. We must remember that suffering is a mental phenomenon and it can only be changed or eliminated by correct perception and transformation of our mental attitude. For instance if a person called John loves his friend Barry, and Barry has become very fond of Chris, who John dislikes, John will be upset. This experience of upset, John believes is due to the behaviour of his friend Barry who has become fond of Chris. But if we examine it carefully, the cause of upset is largely due to John's own dislike, resentment and hatred towards Chris, rather than the relationship of Barry and Chris. If friendship is to be admired and desired, then one must be able to rejoice in other's friendship. That which is causing John to be upset is because of his feeling of insecurity and jealousy provoked by his own anger which he had not dealt with effectively in the past.

Let me elaborate this from the point of view of the importance of solving a problem at hand rather than of the distant past. If a man is shot by an arrow into his eyes, what should he do? Most people fail to remove the arrow struck in their eyes but instead waste time trying to apprehend and convict the accused. They are more interested to find out what happened before the arrow struck in the eye than to remove the arrow from the eyes. If the hurt is caused by the arrow in the eye, then obviously the arrow must be removed first. But we don't. We want to find out the beginning of the problem how it all started from scratch, i.e. "the creation". The spillover of this way of dealing with suffering is so epidemic and extremely hard to overcome. We deny and disapprove the hurt that we have already experienced but attempt to bring similar if not heavier hurt upon someone else, whether proven guilty or innocent. Blaming the past and the way we were treated in our childhood, by our parents does not address the problem at hand but makes the individual feel more resentful towards their past to the extent of developing self-hatred.

This takes us to the second Truth, the truth of the origin of the suffering. In Buddhism, the basic ignorance, greed and hatred in our minds are called "the three poisons". The benefits of religious practice can only be appreciated if individuals take full responsibility for their own poisons of the mind. The events of the past are not happening now, except by oneself playing it back in one's own mind. We can see how our mental problems are created from small factors. To reduce or eliminate suffering caused by one's own poisons of the mind, one must not see them as bad or eternally evil. People who do not know anything about poison become its victims. There are also large numbers of people who know the danger of the poisons of the mind but they suppress them without becoming able to detoxify them. Familiarity and understanding of this second truth is crucial to be able to do something about the upset which I referred to earlier. When we become aware that all human beings are victims of their own poisons of the mind, we have no time to become angry at the other person, but instead we feel empathy for the other person. This feeling of empathy brings ourselves to the same level as the other person and become more connected. By doing this we will not dwell in our own misery to deepen and enlarge it, but it sharpens one's focus on the other person's needs. If the cause of the hurt is the event of the past, it has already gone and is not happening now except oneself playing it back in one's own mind as if it was unforgettable. The moment we express our feelings and care for the other person, we will discover that he is in a similar if not worse mental state than we were. There will be an instant cure of the hurt that one has been experiencing out of misunderstanding. This changes the mental climate of anger into compassion and one will feel powerful to bring this change in one's mind without feeling powerless and hopeless. His Holiness the Dalai Lama has said that anger does not help us to solve the problem at hand, but robs us of our sleep, appetite and make us unable to appreciate the good things we have in life.

Compassion is taught in all religions but compassion without wisdom is likened in Buddhism to a bird with only one wing. While we all believe in compassion and its virtues, we mustn't use anything to impose upon others in the name of compassion. If someone does not want our

compassion, we must have the wisdom to accept the rejection of our compassion but at the same time not to be discouraged by such experiences. This raises the importance and need of balance and moderation in whatever we do in our lives, be it religious, compassionate or otherwise. If we go into extremes, religion can bring more suffering than it can benefit the world, as we all know. There are certain things we should not be too certain about. So let the law of cause and effect take its own course of reality. Some things we just have to accept. They will change in their own time for nothing is permanent in the world.

No matter how hurtful it may have been, it will pass or it mustn't have happened at all. So do not dwell on the past whether good or bad for it may obscure the good things which surrounds you now. The ability to maintain the mind in a free and accepting state is an art of happiness, joy and love. This is called the truth of the path, the third noble truth. It is also the path known as "The Middle Way (Madyam marga). This comprises of eight fold paths:

1. Right View: All things are in a state of dissatisfaction, whether you are young or old, have a partner or do not have a partner, or you have a job or do not have a job and so forth. Even if you obtain something you desire, it will never remain the same as all things are impermanent. If we wish things were permanent instead, you are asking for more trouble. If you are enjoying this meeting, that is because it was not here before and it will soon be over. If we sit here longer than it is comfortable, we will be in heaps of trouble, so we must move on. Reflection on the law of impermanence can resuscitate you when you are short of breath in certain problems of life and help to cultivate right view.

2. Right Thought: Through the correct attitude that things are not as real, satisfactory and durable as it appears or we want them to be, it will enable us to let go of things so we can become more flexible and less rigid and thus experience less stress. This helps us to sort out the thoughts and to get rid of certain thoughts which are harmful to dwell on. Certain thoughts such as kindness, impermanence and compassion towards other living beings can become a very powerful way

of directing one's energy. Lots of the sufferings come from one's selfishness and the inability to think of positive things. Therefore it is important to choose the right things to think about. We see and hear what is in our mind.

3. Right Concentration: This way we will sort out the priorities in our lives and we will not waste time on trivial matters. There will be a sense of focus and discipline in life which will inject much needed motivation to live and help others rather than cherish for one's own welfare. This requires the adoption of a practice of meditation which one should learn from qualified teachers; not from books or people who have not invested devotion and faith in teachers, and lineage in which such teachings are kept, but teach from books without any experience and authority. Like a camera, one's mind has to be carefully focussed through attentive concentrated meditation to see the clear picture of reality as it is. If the camera of mind is out of focus, then our mental lens will project the incompetence of the cameraman who may in turn blame the object for being too close or far. His picture will be unclear if any.

4. Right Action: One will have the ability to restrain one's senses (particularly when things are going into extremes) and refrain from inflicting lots of unnecessary suffering by sheer carelessness and indulgence. By conserving all the physical energy one will carefully utilise them to benefit others but not to cause any injury to their life, health, property and relationship. A person practising right action, who is able to give so much to others enjoy good health and will be full of energy. He will not feel worn out or exhausted.

5. Right Speech: Exercising restraint over one's physical energy will enable one to conserve one's energy. So much suffering in our lives are created by our mouth's Karma. So if we understand the meaning of right speech we should watch out for our mouth. Go for a short retreat and see how much peace there is in silence and see how much garbage we talk every day. Gain some power over your speech so that no hurtful words will slip out of your mouth. Say what is good for the many and that which is only truthful and helpful. When you do this, you will hear both praise and blame as the echo of voidness and oneself will be

unaffected by other's verbal abuse. Rather they will become objects of compassion.

6. Right Livelihood: This world is for all creatures not just for human beings and the powerful ones. We must give a fair go and act decently towards other living beings. It is not considered clever to take advantage of others who are weaker than ourselves. Cultivate the ability to treat others with respect as an individual just as oneself desires to be happy. Think of animals and their welfare if you cannot deal too many unruly human beings. Focus on what you can do without causing direct harm on others and share things you have with others who need them most. Give to the needy and do not hoard wealth for it will only become one's own prison and create many enemies. You can not take anything with you when you die anyway.

7. Right Mindfulness: We know we should be fair to others but without deliberate mindfulness we are often very forgetful to do the very things we want to do ourselves. We may become angry with ourselves just because we were not mindful enough to bring the key left on the table before closing the door. You may become very cranky and may have a very hard day at work. This will create a very bad working environment for your colleagues who will blame it on your temper and so forth. Mindfulness practice requires consistent daily meditation practice on how to integrate it into every day life. In one Sutra it says: "One with mindfulness is happy and one without is unhappy".

8. Right Effort: One must be diligent to change one's habitual patterns. Just as weight conscious people get up early in the morning to jog and do exercise, likewise one who is conscious of the actual health of mind, one must employ right effort to break the negative habitual pattern of one's attitude to life and its problems. The effort to come here tonight can be regarded as right effort but we must implement what we have learnt from this meeting tonight. You do not learn these things in school, college, university, on the soccer field or in the pub. One should create an environment in the house to change one's habits, in the bed room, in the kitchen and wherever you are by yourself. Develop strong will inside you and this undying will and courage to do good for the benefit of many will be of great benefit

whether you regard yourself as religious or not.

If we have individuals who adopt this theory of the eight noble paths they will experience the fourth noble truth, the truth of the cessation of suffering. Whether you believe in god or you are an atheist, or believe in reincarnation or in an eternal heaven and hell, it does not matter. You will only experience what you deserve. You will be a kind and sincere person, that is the purpose of religion. Who cares what we believe in? It largely depends on how we conduct our everyday lives. That is the essence of religious practice, the eight noble paths I have spoken about tonight are one of the many ways to practise it.

In brief, do not be too happy when everything is fine with you for there are many less fortunate beings who are suffering at this very moment. Do not forget the poor, sick, abandoned children, the lonely and aged people. Share your happiness by thinking of their welfare. Think of those caught in the war in former Yugoslavia and places like Cambodia and do something useful with compassion instead of indulging in your own fortune. Also do not be too sad when things are not going well with you. You are one of the many fortunate people in the world. Appreciate and be grateful for the things you have, this will reduce your sufferings. In order to experience the cessation of suffering, the fourth noble Truth, learn to be durable like the earth, fluid like the water, creative and light like the air and free and vast like the sky. Learn these qualities you yearn to cultivate from the mother nature, if one fails to find any human being devoid of fault. Finally may the ills of humanity not defile the ever shining truth of the enlightened ones, like the lotus flower untainted by the soil in which it grows. Accept what you can now, for this cannot be repeated again. What you can not accept now, do not reject it straight away, for you might find it useful later on. Let there be awareness, compassion and tolerance among all living beings.

*This was delivered at the Australian Parliament of World Religions, Pilgrim House, Canberra 26 June, 1993 and was subsequently published in Bhakti magazine.

Avalokitesvara
and the
Tibetan Contemplation of Compassion

Karen M. Andrews
May 31, 1993
Tibetan Contemplative Traditions

Who is Avalokitesvara? What is his place in Buddhist doctrine and history? Why is he important in Tibetan Buddhism? What is his function in Tibetan Buddhism? What does he do? What are the philosophical explanations of his existence? How is he used in contemplative practice?

Avalokitesvara, the bodhisattva of compassion, is one of the most important and popular Buddhist dieties. Although he originally was conceived of in a Mahayana context, he has been worshipped under different names and in different shapes in nearly every form of Buddhism in every country Buddhism has entered.

Avalokitesvara first appears in Indian Buddhism. He is originally mentioned as one of a number of bodhisattvas. These bodhisattvas are personifications of various attributes of the Buddha. Avalokitesvara is the personification of compassion. The

development of a Buddhist doctrine of bodhisattvas is more or less contemporaneous with the development of brahmanic deity worship. Either the same societal forces led to both developments, or the bodhisattva doctrine was a response to the rival movement of brahmanic deity worship. The bodhisattva doctrine may have appeared as early as the second century B.C.E.

Originally, bodhisattvas were considered to be less important than buddhas. Buddhas, of course, are completely enlightened beings, whereas bodhisattvas are beings who are on the verge of being completely enlightened. Bodhisattvas originally appear as attendants of the buddhas. Texts speak of there being vast numbers of bodhisattvas. A few of the bodhisattvas are more important than others. Avalokitesvara does not appear in the earliest texts about bodhisattvas. However, after a while he becomes one of the important bodhisattvas. By the second century C.E., in the larger Sukhavativyuha, Avalokitesvara is described along with Mahasthamaprapta as one of the two bodhisattvas in Sukhavati, the pure land of the Buddha Amitayus. The two of them are described as the source of the light that illumines the pure land. They also teach the devotees of Amitayus, adapting their techniques to the understanding of the listeners.

Avalokitesvara's prominence changed as the doctrinal position of Mahayana Buddhism changed. In Mahayana, compassion and wisdom are seen as being the two most important qualities a person can develop. In early Mahayana, wisdom was seen as more important than compassion. Therefore, Manjusri, the bodhisattva of wisdom, was the most highly regarded bodhisattva. However, with time, compassion came to be seen as the more important quality, and thus Avalokitesvara became the most honored bodhisattva.

Avalokitesvara's rise in prominence did not stop at this point. Probably around the fifth century C.E., a full-blown cult of Avalokitesvara emerged. Avalokitesvara evolves into the supreme savior of all suffering beings. He takes on the characteristics of various brahmanic gods, such as Brahma, Visnu, and Siva. Like Brahma, Avalokitesvara is described as the creator of the universe.

"From his eyes arose the sun and the moon, . . . from his mouth, the wind, . . . from his feet, the earth."1 He is also described as being the creator of the brahmanic dieties. This attribution of power to Avalokitesvara may well have been aimed at proselytizing among brahmanic followers.

Descriptions of his physical form become increasingly fantastic. He is described as being enormously large. His face is a hundred thousand yojanas in circumference (a yojana is a few miles long). His body is gold colored. He has a halo in which there are five hundred buddhas, each attended by five hundred bodhisattvas, each attended by numberless gods. From the hair between his eyebrows there flow eighty-four kinds of rays. Each ray contains a vast number of buddhas and bodhisattvas. Each of his ten finger tips has eighty-four thousand pictures and each picture has eighty-four thousand rays which shine over everything that exists. And so forth.

At this point, Avalokitesvara takes precedence over the buddhas. Even the buddhas cannot estimate Avalokitesvara's merit. It is said that just thinking of him garners more merit than honoring a thousand buddhas. Avalokitesvara's rise to prominence may be partially caused by the Mahayana doctrine of the bodhisattva vow. This doctrine says that the most wonderfully compassionate decision is to vow to stay a bodhisattva instead of becoming a buddha, because bodhisattvas can more effectively help other beings become enlightened. Because of his compassion, Avalokitesvara has vowed not to become a buddha and slip into nirvana until after all sentient beings are saved from the nearly endless round of suffering in samsara. Instead, he has committed to continued existence so that he can help suffering beings. Avalokitesvara is not the only bodhisattva who has made this vow. However, he embodies the compassionate motivation which led all bodhisattvas to the vow. Thus, valuing the bodhisattva vow leads to valuing Avalokitesvara and everything he signifies.

As compassionate action is Avalokitesvara's essence, he is supremely helpful. He can assume any form in order to help sentient

beings, and there are descriptions of him appearing as buddhas, brahmanic gods, humans, and animals. In all these forms he does wonderful things to help alleviate the suffering of beings and bring them towards enlightenment. He rescues his followers from fires, from drowning, from bandits, from murder, from prisons. He gives children to female followers who want children. He helps release beings from the three mental poisons of passion, hatred, and delusion. He helpful both on the physical, worldly plain, and on a more psychological or spiritual level.

In addition to being the personification of compassion, Avalokitesvara has been connected with light more thoroughly than any other Buddhist deity. The stories say that he was created from a ray of light which emanated from Amitabha Buddha. Avalokitesvara is a luminous being of light, and is repeatedly described as radiating light which shines over all sentient beings and over all corners of the universe. Similarly, he sees everything and everyone in all corners of the universe, a fact that is emphasized by his name. "Avalokitesvara" comes from two roots, "avalokita" and "isvara". "Avalokita" means "glance" or "look". "Isvara" means "lord". "Avalokitesvara" has been taken to mean such things as "Lord of what we see", "Lord who is seen", "Lord who is everywhere visible", "Lord who sees from on high", and "Lord of compassionate glances". None of these interpretations are definitive, but regardless of how his name is interpreted, Avalokitesvara is certainly connected with lightness and sight. His ability to see everywhere is important because it allows him to manifest his compassion everywhere. The light that he emanates everywhere is sometimes described as a representation of the flow of his compassion to all parts of the universe.

As Buddhism spread throughout Asia, the teachings about Avalokitesvara were carried everywhere Buddhism went. In China and Japan, Avalokitesvara is the most popular bodhisattva. However, he has undergone a sex-change, and is almost always portrayed in feminine form. In China, he/she is called Kuan-yin or occasionally Kuan-tzu-tsai. In Japan, she is called Kan-non or Kwan-non. In both countries, she is seen as the supreme savior of suffering

beings and is worshipped widely as the goddess of mercy and compassion. She gives children to women who pray to her for offspring.

The cult of Avalokitesvara also spread to Sri Lanka. This is a little surprising as Sri Lanka primarily follows Theravada Buddhism, while Avalokitesvara was originally a strictly Mahayana conception. In Sri Lanka, he is called Natha, which is an abbreviation of Lokesvaranatha, which means "Lord of the World". He has become identified with the bodhisattva Maitreya, the "future Buddha". He is also seen as being identical with several Hindu gods. Natha is seen as the guardian deity of Sri Lanka, and is reportedly worshipped primarily because he is regarded as a pragmatically useful source of advantages in the phenomenal world. Although I have been able to find very little information on it, apparently the cult of Natha has also spread with little change to other Theravada Buddhist countries, such as Cambodia and Burma.

In Nepal, Avalokitesvara is conflated with the Brahman deity Matsyendranath. He is worshipped in elaborate rituals which are performed by a priestly caste. Ordination is handed down from father to son, with some important positions being sold to the highest bidder from within the caste. According to one reporter, the meanings behind the rituals have been largely forgotten. However, they continue to be performed because they are customary and are considered to bring luck.

In Tibet, Avalokitesvara has reached a position of tremendous importance. The stories surrounding him, his integration in the practicalities of life, and his use in meditative practice have all been highly developed. The Tibetans started with Avalokitesvara (here called Chenrezi) where the Indians left off.

Traditional Tibetan belief holds that the cult of Avalokitesvara was brought to Tibet by the eighth century C.E. During the eighth century, King Srong-btsan sgam-po was active in bringing Buddhism to Tibet. This king is considered an incarnation of Avalokitesvara. Tibetans traditionally believe that he was

active in propagating a cult of Avalokitesvara. Not long after his reign, Buddhism went into a decline, and did not revive until the eleventh century. Western scholars believe that although there may have been a small following of the Avalokitesvara cult during the reign of Srong-btsan sgam-po (and there is not much evidence that there was any such cult then), the cult certainly died out between then and the eleventh century. Traditional Tibetan belief holds that the cult continued in secret during this period. However, everyone agrees that the cult of Avalokitesvara first became widely popular during the eleventh and twelfth centuries.

The belief that Avalokitesvara is the creator of the universe was accepted and elaborated upon. In Tibetan writings, he is seen as not only creating the world and the Hindu gods, but also as creating the buddhas and the buddha-fields. The whole cosmos exists as a manifestation of Avalokitesvara's creative activity.

This is especially true of Tibet, which is depicted as having a particularly close relationship with Avalokitesvara. His vow to save all beings becomes a vow to first save Tibetans, because they need his teachings particularly badly and because the Buddha asked him to concentrate on Tibet.

Stories arose which describe Avalokitesvara as being intimately involved with the creation of Tibet. One of the more popular of these stories describes the creation of the Tibetan people. Once there was a monkey who was an incarnation of Avalokitesvara. He lived in the mountains, where he practiced meditation. One day, a demoness saw him and fell in love with him. She tried unsuccessfully to court him, and finally said that she would bring disaster on all the living beings in the area if he did not marry her. The monkey was confused, and asked Avalokitesvara what to do. Avalokitesvara told the monkey to marry the demoness. The monkey and the demoness wed and had six children, who were the progenitors of the Tibetan people. Thus, all Tibetans are direct descendants of a manifestation of Avalokitesvara.

Tibetan Buddhism also produced the innovation of recognizing

mortal human beings as the incarnations or manifestations of dieties. As far as I am aware, Tibet is the only Buddhist country that has this understanding. Incarnations of Avalokitesvara are particularly important in Tibetan history. I have already mentioned the progenitor monkey and King Srong-btsan sgam-po. Another manifestation of Avalokitesvara which plays a crucial role in Tibetan history is the Dalai Lama. The Dalai Lama has been repeatedly incarnating in Tibet since the fifteenth century. He is now in his fourteenth incarnation. The Dalai Lama is the head of the Kagyu-pa school, which is one of the four major schools of Tibetan Buddhism. Also, from the time of his fifth incarnation in the early seventeenth century until the Chinese conquered Tibet, the Dalai Lama was the ruler of Tibet. Thus, Tibet was governed by a manifestation of their protective deity, who was also the progenitor of the Tibetan people and the ruler who had brought Buddhism to Tibet. Further, this deity, and therefore also his manifestation, is the personification of compassion, which should guarantee that his rule is kind and reduces suffering.

Avalokitesvara is important not only in Tibetans' understanding of their history, but also in their practice of Buddhist meditation. Particularly in tantric visualization practices, Avalokitesvara, as the embodiment of compassionate action, is critically important. In tantra, practitioners create visualizations which are structured so as to bring about experiential realizations of Buddhist teachings2. In order to understand the purpose of these visualizations, it is necessary to understand the philosophy which the visualizations serve to make experientially real.

What is this philosophy? It is beyond the scope of my paper to lay forth the entire teachings of Mahayana and Vajrayana Buddhism, but I will try to briefly outline the philosophies which are most commonly used in tantric visualizations of Avalokitesvara.

The most obvious Buddhist teaching used in these practices is the importance of compassion. What, precisely, is the Buddhist understanding of compassion? Compassion starts with sorrow at the

suffering of others. As such, it incites action aimed at reducing the suffering of others. Compassion is the motivating force behind useful action. It is a warm, positive energy directed towards helping others.

Compassion can only arise when we do not have a strong sense of separation from others. If there is a feeling that I am over here, and you are over there, and we are totally separate individuals, then we will not be able to truly sorrow at each others' pain, because others' pain will not touch us. In order to truly be touched by the suffering of others, we have to abandon our attachment to sharp divisions between individuals. We need to live in awareness of the flow of energy between ourselves and others. Chšgyam Trungpa explains, "When a person develops real compassion, he is uncertain whether he is being generous to others or to himself because compassion is environmental generosity, without direction, without 'for me' and without 'for them.'"3

This sense of identity with others is taken to its logical conclusion, producing a profound awareness of the relational, open, empty nature of reality. Reality is relational because everything is intimately affected by everything else. There is no such thing as an independent entity. My well-being is affected by your well-being. The consequences of every action spread throughout the universe just as ripples spread from a splash in a pond. Reality is open because there are no boundaries. "There is the . . . panoramic vision of open meditation--the experience of dhyana--openness. You do not regard the situation outside yourself as separate from you because you are so involved with the dance and play of life."4 Openness involves accepting everything just as it is. There is no boundary between "pure" and "impure" or "good" and "bad". Everything is seen as a manifestation of pure wisdom mind. Reality is called empty because everything is empty of permanent, individual, essence. Thinley Norbu says, "In the undeluded purity of self-appearance, . . . there is no reality of an object of sentient beings and no substantiality of an object of dieties."5 There is no individual existence of things. Everything is intimately interconnected.

When we live in awareness of the empty, interconnected nature of reality, then compassion arises spontaneously. In the Madhyamaka school of Buddhist philosophy, "wisdom" means an experiential understanding of emptiness and interconnectedness. Using this definition of wisdom, it seems that the development of compassion and wisdom are integrally intertwined, each arising from the other. H. H. the fourteenth Dalai Lama has written, "These three, the awakening mind of bodhicitta, compassion and discriminating wisdom, should be totally . . . combined, integrated and enhanced."6 Bodhicitta is the mind which is seeking enlightenment in order to be of benefit to all sentient beings. So from a philosophical point of view, seeking enlightenment, caring for the welfare of all beings, and understanding the empty interconnected nature of reality, all go together as pieces of the same enterprise.

These elements are brought together in the tantric visualization practices. In practices focusing on Avalokitesvara, compassion is emphasized, but compassion is so integrally connected with wisdom that they cannot be separated. Nearly every element of the visualizations brings forth another aspect of compassion and empty interconnectedness.

All of the tantras on Avalokitesvara that I have read use many of the same elements. Different tantras have somewhat different emphases. Some leave out aspects which are included in others. In order to demonstrate how the tantric visualizations use Avalokitesvara to lead to an experience of compassion and wisdom, I will analyze a single tantra which was written by the second Dalai Lama7. I chose this tantra because it includes all of the most common elements and few of the unusual elements of the tantras I have read. Also, it is described in a way which makes the philosophical roots of the visualizations especially clear.

This tantra skips the traditional preliminaries to meditative practice. These preliminaries differ a little from practice to practice, but most contain at least three elements. Briefly, the traditional preliminaries are to take refuge in the Buddha, the

dharma (teachings), the sangha (Buddhist community), and usually also the lamas, the meditational dieties, and the beings in the retinues of the deities (dakas, dakinis, and dharma protectors). Then, one generates the wish to attain enlightenment for the benefit of all sentient beings. Finally, one wishes that all beings have happiness, be free from suffering, never be separated from happiness, and abide in equanimity. The preliminaries are there to assure that people do the practice with an appropriate intention.

The tantra we are looking at begins with a visualization of a light, transparent stupa on the crown of your head. This is the only practice I have found which includes a stupa. Within the stupa sits "your root Guru in the form of the venerable Noble Avalokitesvara." Your "root Guru" is your spiritual teacher. In Tibetan practice, the spiritual teacher is seen as being "the manifestation and humanly intelligible formulation of Buddhahood."8 In the spiritual teacher, the transcendent finds expression. Similarly, the deity is also an expression of the transcendent. In the guru, the transcendent manifests with more personal, individual, and conditioned traits, whereas is the deity, the transcendent manifests in a more ethereal, divine form. However, in both the important thing is that they manifest the transcendent. In so far as this is the case, the guru can be envisioned as being the deity.

Next, the form of Avalokitesvara is described. His form, posture, clothing, and the items he is holding and sitting on are all filled with symbolism. They primarily symbolize compassion, purity, and enlightenment. The final description of him says, "Thus he appears in the midst of a great burst of rays, like a rainbow in the sky with no true independent existence." Having just built up an elaborate description of Avalokitesvara's form, we are reminded that that form is empty of independent existence. We are not to attribute a permanent essence to his form.

The stupa on your head has a thousand doors. At each door you imagine the thousand buddhas of this eon. Although the particular form of this visualization is unique, it is quite common for tantras of Avalokitesvara to invoke lots of other buddhas and bodhisattvas

at some point.

Having visualized your guru as Avalokitesvara on the crown of your head, you next visualize Avalokitesvara as himself in your heart. His form is identical as on your head. He is sitting on a red lotus with a thousand petals. On each petal is the letter A. "A" symbolizes emptiness. At his heart is a moon-disk with the syllable "HRIH" on it. "HRIH" is the seed syllable of Avalokitesvara. It symbolizes Avalokitesvara and all he signifies. The moon symbolizes bodhicitta, the altruistic aspiration to attain enlightenment for the sake of all beings. Moon disks are common in Avalokitesvara visualizations. Around the edges of the moon disk are the syllables of the six-syllable mantra, OM MANI PEME HUNG. This mantra is Avalokitesvara's mantra. It literally means something like "the jewel in the heart of the lotus." It is used in every Avalokitesvara tantra, and has a myriad of meanings and uses.

This Avalokitesvara is in your heart. The heart is symbolic location of the mind. So Avalokitesvara is in your mind. The instructions say he is "inseparable from your own mind." Although you are maintaining an image of him which is not totally unified with your own self, you are not actually separate from him.

Next, thinking of the guru-diety and the thousand buddhas on your head, you generate faith "so intense that tears stream from your eyes and the hairs of every pore of your body quiver." With great yearning, you beg the guru-diety thus:

My mothers and fathers, all the beings of the six rebirth states, are drowning in the great ocean of samsara's suffering. They have no one to protect them, no refuge, these poor beings who are in such agony. I beseech you, please save them right now from this great ocean of samsara's suffering.

Firstly, what does it mean to refer to "my mothers and fathers, all the beings in the six rebirth states"? Traditionally it is thought that all beings have been reborn so many times that at some point, every single sentient being has been our mother. Mothers are

considered to be a source of unconditional love and nurturing. So at some point, all sentient beings have been a source of unconditional nurturing for us. If we live in awareness of this, then we will automatically want to return the nurturing we have received from each being, just as we return our mother's love and wish the best for her. Seeing beings as our parents makes it easy to generate an altruistic attitude towards them. This is a very common image in Tibetan contemplative practice. The six rebirth states refer to the six realms of samsara. The realms include all of the forms in which beings can be reborn. All forms contain suffering.

Second, why do we ask the guru-diety to save all beings from the suffering of samsara? It is clear why we would want beings to be saved from suffering. But why do we ask the guru-diety to save them? The second Dalai Lama says, "Until you have become a Buddha, . . . it will be impossible for you to liberate all sentient beings from samsara."9 Since we are not yet capable of causing the liberation of all beings, we request help from the manifestation of transcendence and compassion which is our guru. It is common in tantric visualizations to request either the guru or Avalokitesvara himself to save all sentient beings in the six realms of samsara. It is especially appropriate that we ask for help from the guru, because in Tibetan tradition it is impossible to practice at all without the help of a spiritual teacher. Tantras cannot be practiced without an initiation from a teacher. Since access to spiritual practice is granted by our teacher, it is appropriate that help in reaching the goal of such practice would also be granted through the vehicle of the teacher or guru.

What happens next?

Rays of light are emitted from Avalokiteshvara's body on the crown of your head and touch the Avalokiteshvara in your heart. And rays of light stream forth from the from the thousand Buddhas . . . and strike the thousand A's in your heart. From these thousand A's and the Avalokitesvara in your heart streams of white nectar flow in immeasurable waves. The nature (of this nectar) is the wisdom of

non-duality; it merely appears in this (white) form.

The manifestation of the guru as Avalokitesvara activates Avalokitesvara as deity of compassion. The buddhas activate the symbols of the empty, interconnectedness of reality. Together, the A's and Avalokitesvara (empty interconnectedness and compassion) emanate nectar which is the "wisdom of non-duality". This image of nectar is common. Sometimes it is referred to as nectar of compassion. So the nectar may be both wisdom and compassion.

The nectar fills your body, purging you of all your unripened karma and all your unwholesome instincts. All the unwholesomeness within you oozes out of your pores as black tar, filth, and scorpions, leaving you completely purified. This is the essence of an extremely important Tibetan contemplative practice of purification. Traditionally, every practitioner does this practice at least 100,000 times. It is also included within various tantras.

In this tantra, once your impurities have left you, "your body becomes fully transformed into Avalokiteshvara." So you are now a manifestation of the transcendent, a manifestation of the principle of compassion. Although you already recognized that Avalokitesvara is inseparable from your own mind, now you are visualizing that inseparability in a much more palpable manner. In fact, at this point it becomes impossible to say whether "your" actions are yours or Avalokitesvara's. There is not any differentiation.

Next, you as Avalokitesvara act with the enlightened power and compassion of Avalokitesvara, answering the prayer you made earlier when you were still seeing yourself as separate from Avalokitesvara. "Streams of nectar flow from all the pores and openings of your body." The nectar flows in turn to each of the realms of samsara, where it purges all the inhabitants of their sufferings and the causes of suffering, which are karma and delusion. It also purifies the surroundings, turning them into pure buddha-fields. All beings are transformed into Avalokitesvara, and have "no true independent nature, just like rainbows in the sky."

You as Avalokitesvara save all sentient beings from the sufferings of samsara. This transforms them into Avalokitesvara and samsara into pure land. This is the working out of a principle elucidated in the Havajratantra, which says, "When an individual is no longer confused, samsara is experienced as pure and hence samsara turns into nirvana."10 In this visualization, all delusions have been purified, so samsara and sentient beings are experienced as pure. All beings are experienced as manifestations of transcendent, enlightened, compassion, and have no independent existence.

Now, you as Avalokitesvara may recite the six-syllable mantra, OM MANI PEME HUNG. As you do so, imagine that all beings who are all also manifestations of Avalokitesvara recite the mantra with you. "It is as if the sound of this mantra causes the universe to shake." All of reality becomes a manifestation of compassion, and invokes itself.

Finally, you imagine light coming from the HRIH at the heart of the deity in your heart. The light lands on all the pure lands you have been imagining. When the light strikes:

These places completely melt into light and dissolve into the beings you have been envisioning as Avalokiteshvara. These beings then completely melt into light and dissolve into yourself. The Avalokiteshvara at the crown of your head melts into light and dissolves into the Avalokiteshvara at your heart. The thousand Buddhas of the fortunate eon dissolve into the thousand A's in your heart. The stupa vanishes like a rainbow in the sky. Then you yourself, whom you have been visualizing as Avalokiteshvara, dissolve into the lotus in your heart with the A's on its petals. This dissolves into the Avalokiteshvara at its centre and he into the (moon-disk) seat in his heart, with the rosary of the six syllabled mantra around it. This then dissolves into the HRIH at its centre and finally even this disappears into a state of clear mind without any object.

All throughout this tantric practice, the lack of individual

essences has been mentioned, while we have maintained individual appearances. Now, the individual appearances collapse into one another, as their non-dual nature becomes manifest in complete oneness, beyond subject-object distinctions. When all individual appearances are dissolved, what is left is "a state of clear mind." This is analogous to what Thinley Norbu calls "the undeluded wisdom mind of all Buddhas [which] continues permanently in one stainless, unchangeable essence of sky."11 This is sometimes referred to as dharmakaya.

Mahayana philosophy says that there are three realms of manifestation of enlightened energy. The first is dharmakaya, which is simple, stainless, enlightened existence. Pure appearances arise from dharmakaya. These comprise sambhogakaya, which is the realm of intuitive and imaginative communication. Radiant deity appearances belong to this realm. Pure tangible phenomena arise from sambhogakaya. These comprise nirmanakaya, which is the realm of physically existent phenomena which communicates enlightened energy. Incarnate buddhas and other physical manifestations which guide others towards enlightenment belong in this realm.

In this tantra (as in others), practitioners start with their guru, who is an aspect of nirmanakaya. Their guru gives them access to deity appearance, which is sambhogakaya. Most of the practice takes place in this realm, as the realization of emptiness, interconnectedness, and compassion gets spread to more and more aspects of reality. Finally, sambhogakaya dissolves into dharmakaya, and the practitioners concentrate single-mindedly in non-dualistic wisdom mind.

The idea of Avalokitesvara has been used for numberless purposes. He has been used for philosophically unsophisticated rituals and story-telling, and for highly sophisticated syntheses of Mahayana doctrine and practice. He has gone from being a relatively unimportant attendant deity to being the tool which brings tantric practitioners into an experiential understanding of the most profound level of wisdom mind.

"CALLING ON THE NAME OF AVALOKITESHVARA".

[this text was first published in the MIND MOON CIRCLE, Winter 1991 pp 1-11]

This text addresses some of the most fundamental and delicate religious issues. Therefore, it should be read, quoted and analysed in a mindful way.

CALLING ON THE NAME OF AVALOKITESHVARA

by John Tarrant Roshi

Winter 1991

It is said that, even in hell, if you remember the name or if you call on the name of Avalokiteshvara, you will find freedom.

Avalokiteshvara, as I am sure you know, is the bodhisattva of compassion and insight, who appears in the Heart Sutra. This figure is known under many names. It is our task as students of the Way to realise the insight of Avalokiteshvara for ourselves. This cannot of course be done just by imitating and following along. Fortunately, it can only be achieved by finding our own Way and our own practice. In our own uniqueness lies the

great dharma. Keizan Jokin said, "However immensely diverse the mountains, rivers and lands and all forms and appearances may be, all of them are in the eye of the Buddha, and you too are standing in the eye of the Buddha." It is not simply that you are standing there: the eye has become you. The eye of the Buddha and the eye of Avalokiteshvara have become everyone's whole body, each of us standing tall. This enlightenment needs to be refreshed and rediscovered in each person and in each generation, in each individual of each generation and in each moment of each of our lives. There is a path into it and today I would like to talk a little about some of the guideposts on that path.

I have been very interested lately in the interaction between character and insight. Character was very much a concern in old China when the koan curriculum was being developed, and I think belongs with Zen. Yamada Roshi used to speak about Zen as the perfection of character and when I looked at myself and my friends who were longtime Zen students I found that hard to believe; but I think I begin to get some glimmerings of what he meant. He certainly did not mean an easy piety. And you may also remember that Yamada Roshi used to emphasise insight a great deal, and was known for his relentless pursuit of enlightenment when he was a student. Insight is the dazzling, clear, eternal awareness of the presence of Avalokiteshvara in each moment: the presence of all moments and all places in this moment and this place. So that is very simple, really. That one is solved, I guess; we know about insight.

Character is something else. Character is I think more related to time, and grows and develops with a sort of reptilian slowness. And insight cannot go bad on you: either you have insight or you do not. I guess you can lose insight through bad living or not maintaining your practice, but really insight is a fairly clear matter. The realm of character is different, though. Character does change; we can become more whole and occasionally we meet some people who become less whole. A flaw in their character gradually takes them over. I think of character as being primarily the willingness to be with, to read, to listen to, the flow of things that we often call the Tao, for short. It is the willingness not to separate from the current of life. And with this goes the ability to experience our own lives and the willingness to live our lives fully, without resisting our experience. This takes courage, equanimity,

steadfastness, honesty. And I think it really helps if we are willing to be foolish a lot. There is always that noticing with a sense of wonder that is important and helpful in the character work.

An old Sung dynasty Chinese teacher said this: "If you want to investigate this path all the way, you must make the determination firm and unbending until you reach enlightenment." (That's the insight side of it.) "Afterwards it is left to nature whether you experience calamity or distress, gain or loss, and you should not try unreasonably to escape them." I think this is very interesting and true. Character relates to our willingness to be small as well as grand. The flow of things carries us along, and fighting the flow does not help, as far as I've ever noticed. It is how we are with that, what attitude we have to being carried along, that is crucial. Do we have peace in our hearts, even when there is an external calamity, even when we are in the midst of struggle? In the midst of darkness can we find, can we touch, light? If we have no consciousness of the greatness within the small, then we have no enlightenment, no insight; then we do not know about the name of Avalokiteshvara. But Avalokiteshvara is also the other side, is also compassion, and if we have no awareness of our own smallness, if we resist and pull away from our smallness, the rumbling stomach, the aching knees, the sorrows and griefs, the joys and frivolities of zazen, if we try to pull too much away from those and fight with them and have a hostile attitude toward what comes up, then we are clinging too much to the insight side of things, too much to the dazzling clarity. We know then that one flower holds eternity, but we do not know that one aching knee also holds eternity, one destructive thought also holds eternity.

Some people do rather well in a temporary kind of way by clinging to the insight side of things, almost as a refuge from developing character. I think as Zen students we are always veering towards one side or the other of any dichotomy we can name, so this is not a great shame. But I see this in Zen, I have known this in myself. My own teacher and the teacher of many of you, Robert Aitken Roshi, was telling me about a former student of his, who worked hard at his koan work but never really had a very good touch with it; it felt like he had never got down below his neck. He wanted to teach, but Aitken Roshi wouldn't let him, so he went around, visited many teachers, and finally found one who told him

he could teach. Now he travels and teaches small communities. Aitken Roshi told me how he was talking with another rather crusty old Japanese teacher whose wife runs a sushi bar and who is very fond of jazz and who lives in Berkeley. This crusty Japanese teacher was saying he heard this fellow giving a teisho, and Aitken Roshi said, "Well, how was it?" and the teacher said "One chopstick!" (A restaurant metaphor.) This is not really so much to be harsh with this person; it is to use this person as a representative of a state of mind that we can all have, where we cling to our meditation experiences and neglect the other side of our lives, neglect to look in at all, neglect to know our own hearts.

So we have to be patient with ourselves. No matter where we are in our training this is an absolute necessity. Over and over again we think we need to be somewhere else, whether we are at the beginning of our training, or far along, or teaching, or wherever. And we must find the truth right here, right now; we must find our joy here, now. I have even known people come to me in dokusan and say, "Well, I am waiting for sesshin to get over with so I can do some peaceful meditation, without all these bells ringing." How seductive it is, the thought of tomorrow. ... We must find our understanding here. You know I moved to California from Hawaii some years ago now, and people ask me where I came from and I say Hawaii and they say, "Oh, it must have been wonderful to live in Hawaii," and I say "Well, I thought California was wonderful." And then I come out to Australia I come to Perth and people say "Where do you live?" and I say "In California," and they say "It must be wonderful to live in California," and I say "Well, I think Perth is pretty nice": you know how it is. We must find it here; it is always here; this is where the grass is green.

Another side of the character work is, I think, to trust mystery, to trust the not-knowing within ourselves, not only as a subjective state but as an objective feature of the Way, as something that is really intrinsic to the Way. It is a sense of trusting in what is mysterious, what is not known and not limited by knowing. What we know always in some way shuts out the rest of the world. It is always that ten percent that is dazzlingly clear. There is a story of a fellow who was searching around for his keys in the weeds under a lamppost. Somebody else came along and helped him search for an hour or more. Finally this person

said, "We've gone over all this ground--are you sure you lost them here?" And he said, "No, I didn't lose them here actually, I lost them over there, but there's more light here." That is our knowing; that is what we know. If we are open to the darkness, it is very rich, it is fecund; and that is on the character side of things.

Also it happens that we get into a kind of revolt, particularly in the koan work because it is so fraught with success and failure, and good and bad, and acceptance versus struggle, and all that stuff. We get into a revolt about it, and the koan either seems far away or it seems like an impossibly difficult, tense way of working in zazen. People get sick in the stomach and throw up, or come in and yell at me -- all sorts of things go on. But the task from the point of view of character here is to find a way to do the koan, to unite with the koan, no matter what; not to cling to a particular idea of how to do it. If your particular idea of how you are doing it is not working, then try something else. If you were trying to fix a leaking tap in the sink you would try something else if one way didn't work. I think to use that kind of common sense in meditation is also important, not to be too literal-minded.

Sometimes technique too is divided into the character and insight sides: the shikan-taza -- which is the great acceptance, the great sky mind, the consciousness that spreads over the whole universe like the rising sun -- and the sharpness of the koan way. However, I think at bottom there is not a lot of difference in the ways we meditate and there need not be a lot. If you emphasise the peacefulness of zazen, sooner or later you will have to take up the sharpness, take that extra step; if you emphasise greatly the insight side and the sharpness, sooner or later you will have to come to an acceptance and a peacefulness. Always, whenever we have a dualism, in the end zazen unites them; even character and insight are this way.

Meditators have many things come up, but one thing that is very characteristic is fear. Fear takes many forms. It can be extraverted and take the form of anger and resistance against things in the outer world, against things in the meditation, which is some fear of going deeper. Or it can be quite clear that we are just plain scared, and fantasies of fear run in our heads and we have nightmares on night two, or we are

afraid of pain. I think a large part of the character work is just to become tolerant of this. If it is true that we need to experience our own lives, we need to notice what is happening, we need to notice that we are having a feeling or a thought. Often we don't: we are just subject to it, for days sometimes. The first thing is to notice it, then the next thing is not to take it too seriously, to have a kind of ease and space around it, an equanimity with what comes up, a generosity of mind; so that if fear comes up we also have the attitude of "Thank you for everything; I have nothing to complain of." And THEN scream! And then after that say, "Thank you for everything; I have nothing to complain of: I just screamed."

I think this equanimity then allows us that necessary foolishness which is essential for all learning and which is spoken about by many great teachers when they have emphasised the value of the mind of the child -- that open, clear sight.

A woman told me a story recently that I thought very typical of the process of the Way for some of us. This was a deep vision she had had, many years before she told it. It had ruled her life ever since, and was only just starting to transform, which is how she came to remember it and so to tell it to me. This is the vision:

There was a desolate, post-holocaust city, a science fiction city, ruined and devastated after a war. On the outskirts of the city, in a desert, was a young prince, standing up. In some way this young prince was the woman. All the young prince had was one of those ornaments in which, when you turn them upside down, it snows. She thought this a strange vision to have: a ruined city, and a young prince standing with this ornament. In the vision, the prince looked at the devastation in the city, and he could not bear the suffering. And he looked at his little ornament with its snow scene and pines and its mountains, and he thought, "What a stupid thing this is; it is just a mechanical thing. There is no hope." He threw it down, and it shattered.

When she told me this my body shook a little. There was such despair in

that gesture of throwing down the one beautiful thing. What I thought about her state of mind was that at the time of the vision there was nothing for her to hold on to, nothing at all, and that somehow she needed to go further into the pain, to experience more fully the darkness, and that for her throwing away this ornament was the movement even further into the darkness, into the suffering. I think there are times in zazen when we just have to accept that we do this. We fight with the zazen so much: we just have to bear it and endure any way we can, and we go into the difficult times. Quite often I have known people to leave a retreat at such times, but then come back; and sometimes good people leave and come back. I think it is very important to stay if you can. But even Hakuin, one of the great teachers of the Japanese lineage, gave up zazen for a while. He had a great fight with his zazen and lost. He decided his life was miserable and he would get what few pleasures he could by carousing and reading poetry. And eventually, as is the way of things, the zazen seduced him and led him back. He could not quite leave it alone: he had not resolved his koan and brought him back.

But there is another possibility which just began to occur to this woman, which is why I think the memory of the vision came back. This possibility is that all is not lost. When we see the suffering in the world, there is still a treasure in our own awareness, and that treasure relates to our attention. There was an opportunity in that little ornament, with its trees and its snow scene, which was to understand that it was the source, the talismanic source. It is the koan. And out of the koan the whole city is rebuilt or recreated, the entire world restored, pristine and beautiful, over and over again. So the great universe, with its joy and sorrow, peace and light, returns, even after suffering, in spite of the vastness of human suffering. Sometimes we can only get to this restoration by going through the darkness, and character is the willingness to hold in the darkness and to be held in the darkness. Some people have told me that in the hard times in zazen they call upon everybody who is wise that they have ever known to sit with them, and somehow that holds them. And that can be very helpful, can't it? Other people have had just spontaneously old teachers come to them while they are sitting and hold them. I have had this experience myself, of an old teacher whom I had always wished to meet and who died before I met him, coming and walking behind me while I was sitting at

night.

So character relates to the willingness to use any means and to be inventive when it comes time for holding. When I think of the word "holding" I think of arms and the maternal quality that develops in us in zazen, that very steady, deep quality, where all sorts of things come and go, and we have an equanimity with them. This is the enduring wisdom of being able to stay with it. And then not to take the darkness too literally. "I am sad; I am in pain; I am tired; I am bored; I am distracted": yes, fortunately! This is the great life. And then of course we find that it is a little harder to distinguish between sorrow and joy. This too will change; this is not the whole thing. Because I am happy does not mean I will always be happy because I have had a great experience does not mean that I should cling to that great experience. Even in hell you remember the name of Avalokiteshvara: that is this awareness.

Avalokiteshvara has many names in the Buddhist tradition alone (and three sexes as far as I can tell -- masculine, feminine, and androgynous): Chenresig ; Tara, who is a manifestation and comes in various colours -- for example, whine and green; Kuan-yin, who also comes in various colours, and comes with or without an infant, and in various sexes; Kanjizai, Kanzeon, Kannon; perhaps Mary and Isis; and on and on. Many forms.

An old-time Zen student, a woman, in California, who has sat for many years, and is a very senior person, told me this wonderful story from Gregory Bateson. One time he gave a talk at Green Gulch Zen Centre, and spoke of a young boy who had psychotic episodes. The boy was schizophrenic and the whole world would close in on him and become terrifying. He would think that people were invading his mind with their thoughts, and trying to programme him through what was on the television, and telling him things to do. So he would spend time in the in-patient ward, and receive medication, and gradually his mind would clear, and they would release him, and he would go home, and get worse, and he would come back to the in-patient ward: there was this cycle. One time he was going home for Thanksgiving dinner, and he really wanted to do better this time, and he talked to his psychotherapist about how to

do better. So he went home and he was having dinner, when he noticed that the peas were too green, and the turkey looked just too much like a turkey, because it was thoroughly poisoned, and he knew by the way people were looking at him that they were all wondering whether he was going to catch on to this or whether he was going to eat the turkey. And then he noticed that his mind was doing this. For the first time he noticed that his mind was doing this: he remembered the name of Avalokiteshvara in the midst of hell. He thought, "Oh, my mind is seeing the peas as too green!" and he burst out in ecstatic laughter -- and they carried him away. But still, he understood; he remembered the name. "Thank you for everything; I have nothing to complain of." And it did not matter if the people around him did not understand, because for the first time he remembered the name of Avalokiteshvara.

So if you remember the name of Avalokiteshvara, calamity or joy may visit you: that is not the point. You can see how remembering the name of Avalokiteshvara actually involves a union of character and insight. It was an insight to notice that he was noticing that the peas were too green. And then to have equanimity even when he was carted away, that is character. Even when you're carted away, you shouldn't go psychotic again; you need to hold through that time.

Character involves a willingness not to be grand all the time and not to be perfect. In this boy's case, suddenly he still had the role of being psychotic; it was thrust upon him even though he did not have the inner experience. Ceremony is quite a good teacher for me it this way. One of my friends who is a senior Zen student and is often tanto in his particular group is really terrible at ceremonies and has been a wonderful teacher for me. I'm not very good but I can fake it, and he can't even fake it. He stands up to hand me the incense, and he breaks it; so then he's really careful the next time and he doesn't break it, but he trips on his robe and he falls into me, and I fall into the altar, and the incense gets knocked over. And things are like this, things are demonic. Just as for some people their feelings are demonic, for him things are demonic, and they don't stay still. When he walks into the dojo the incense pot has moved overnight. He has been a great teacher for me to be at ease with that part of myself, so that I can just go and do the ceremony as best I can. Often the incense falls over,

but there is a kind of relief in that. It is good sometimes to be small. Then I really learn too from those of my friends who are much better at doing the ceremonies than I am. Perhaps they need to learn some other things; ceremony is not a problem for them. We perhaps symbolise this willingness to be small, to be nondescript, by the black, the raggedness The inner raggedness is so characteristic of zazen, when we begin to attend and the mind just won't take any notice of our intention to attend. There is nothing much we can do with it; we must just trust the mystery of this unfocused, raggedy mind, this moth-eaten mind. Something plain and commonplace and very ordinary. So it is good not to be afraid of our smallness.

Another longtime Zen student who is a marvellous artist told me a story that bears on character. She was on the metro in Paris, and a man who was very, very drunk got on. He was a young burly man who had no shirt and had tattoos all over his arms. He lurched on to the car and came past my friend and stood between two women on either side of the aisle. One of the women was strikingly beautiful, and he leaned over this woman and began to abuse her. My friend, who is Asian and petite, became afraid and began to do the prudent thing and edged back towards the door of the car. And then she saw the woman sitting across the aisle from the beautiful woman reach up and take the man's hand. Her hand just floated up. As if out of the emptiness of the universe her hand floated up and took his hand, and he burst into tears, and softened immediately. That woman remembered the name of Avalokiteshvara; she was open to it. My friend said she felt she had missed something; she felt a little ashamed of her prudence at that moment. I think we can all recognise when we have done something like this. Of course, sometimes edging towards the exit is the right thing to do. But still, there was something even better than the right thing to do, which was to remember the name of Avalokiteshvara.

When we are willing to be open, and rather small and ignorant, the great joy comes of its own, and in a sense it is none of our business anyway. It is just our business to walk the Way and to remember the name of Avalokiteshvara. The temptation of being all-wise is not really very interesting once we give in to it. Sanghas of course have a rhythm where they get really good at something, and then that creates its own

tightness and difficulty, so there is some upheaval and they get awful at things for a while but they are rather exciting and new; and then there is an opening and a gradual rise until we get good at something, and then we fall apart again. It is the same in our individual practice Equanimity in the midst of the coming and going is really so important. It is the fruit of the Way, but it is also the discipline we need in order to experience the fruit of the Way. To be rather serene and just keep walking.

The dharma then is rather full of happy errors. If we are willing to be small and walk along, we will find that the dharma really does take care of us: we are guided, we have the right accident at the right time, things like that. We find that we fall into the error of pushing too hard, and then we stop, fatigue stops us, and we think that this is an awful thing, but it relaxes a little, and then suddenly the mind becomes quite clear. So do not despise or be snobbish about any state of mind that arises. When we are blocked we must trust that we are blocked; that is where we are. We must trust that this too is where Avalokiteshvara name has magical power. We must find a way through it or into it or around it; become one with it or suffer it; climb over it, be squashed flat by iin. We must have some relationship with it. And as long as we are in a relationship with it, Avalokiteshvara is there. And what is more interesting anyway than walking the Tao; what is more precious than the opportunity to walk the Tao? There is more value in the difficult blocks, more courage and more serenity. It is easy to be courageous when we can see the clear path ahead. The only use of courage really is when there is mist all around and we must take that next step not knowing where the next beyond that will lead. When Shakyamuni stopped his ascetic practices he took some nourishment given to him by a woman, so the feminine sense of being as well as the great sense of doing was allowed in and he became more whole. Then he looked up and the accident of the morning star occurred. Have you thought: what if Venus were not in the evening sky at that time? No Shakyamuni, no Buddhism. We must trust that :some other accident would have opened his heart and mind.

I have been interested for some years now in the "I Ching", which is not formally a Buddhist book but a wise and interesting one, and I think a Zen book, concerned with integration of character and insight. It is an

oracle, the hexagram of the oracle is made up of six lines: two units of meaning, called trigrams, of three lines each. The hexagram for peace has the trigram for earth above the trigram for heaven. Very interesting. When heaven is above earth, you have stagnation, standstill, because there is the tendency for the world of insight, the world of heaven, to go off into its purity and clarity, and the world of earth to stagnate into the obtuseness and lumpishness of matter. There is separation, there is no creative interchange and flux. But the hexagram for peace, or "tai", has the intermingling, where heaven is actually below earth and there is an intermingling of the worlds of character and insight. The great clarity of zazen is simultaneous with the distraction, the memory from childhood, the pain in the knees; and so we no longer say, "I wish the pain would stop so I can do some meditation." This too is meditation; this is the great life.

We do not chase perfection. When heaven is below earth is when the young prince discovers that this toy is the source of all things and joy. The play, and the spirit of the child: you just turn it upside down and every time it snows. Just like Avalokiteshvara: every time you call, there she is, calling.

So it is important to stay with the joy of the smallness and the joy of the mystery. Another old Sung dynasty teacher said, "The one who preserves the Way through old age to death in the mountains and valleys is not as good as the one who practices the Way with a group of people in a community." It is good to have the smallness and the obnoxiousness, we might say, of sangha; dealing with the dailiness, dealing with those petty difficulties that always arise when we have to live with others. If we have the equanimity and the insight here, how much richer and deeper it is. Practising together.

A Sung dynasty teacher called Kuan-lin looked unhappy and worried. One of his many, many students came to him and said, "What's going on? You look a little disturbed." Kuan-lin said "Well, I haven't found anyone yet to be the accountant." The student wanted to help, and recommended the assistant superintendent. The teacher said, "Yes, he's pretty good, but not quite right, I think. He's a little rough, and I'm afraid petty people might resent him and intrigue against him and say he didn't

deserve it." So the student said "How about the attendant? He's honest and prudent." Kuan-lin said, "Yes, he's prudent, but it might not be good for his training. The supervisor is pretty good, and I'm still thinking about it." Later the students asked another teacher, "Why did Kuan-lin, who was a great teacher, worry about these small and petty things?" The other teacher said, "Those who are really concerned about the Way have really made this fundamental. The ancient sages are like this. We must be concerned with everything in the dharma; we must let our compassion run to everything in the universe."

In sesshin you manifest the compassion of the dharma; you call on the name of Avalokiteshvara just by the sincerity of your zazen. That sincerity is sufficient. Each moment we come back to the freshness, and it really does not matter what the moment before was, how stale it felt, or how weary, or how far away from the name of Avalokiteshvara. We must have that willingness to call on it at this moment and realise that when we do call on it, this moment fills eternity. There is nothing else in the universe. These hills and the birds and the great wind in the trees: all are the calling of Avalokiteshvara. And then we create the conditions by which the moon rises. We do not make it happen; the moon rises of ins own without the help of human hands. All we need to do is call on the name of Avalokiteshvara over and over again.

MUDITA

//Mudita// means appreciative joy at the success and good fortune of others. Evaluation of achievement is a precursor to mudita, and appreciation a component of mudita. Seeing the good in others and learning to recognize and admire what good there is, is what mudita tacitly implies. Laughter and exhilaration are not characteristics of mudita. Mudita is joy and appreciation flowing quietly out of the core of one's heart towards others like the waters from a spring flowing outwards from the bowels of the earth. Spontaneous and sincere participation in another's glorious hour is possible only when the quality of mudita is developed to its fullest.

Genuine joy in the prosperity of others is indeed a rare quality. The virtue of mudita may be best noticed at work in the joy of parents over the success of their offspring, and in the genuine ecstasy of teachers over the success of their pupils, particularly in the latter situation when the threat of the younger eclipsing the older is always imminent. While it is easy to practice mudita within the narrow circle of one's family and friends, to identify oneself with the joys and triumphs of outsiders requires deliberate effort. Yet the capacity for doing so is rooted in man's nature. Smiling faces of adults make children respond readily with their own smiles. This potential in the child should be nurtured and activated by parents and
~~~~~~~~~~~~~~~~~

educationists. For the seed of mudita planted early in a child will grow and blossom and bear fruit in his adolescence and in his adult life. To some extent, man is a product of his environment -- with this in mind, adults, parents, teachers and wardens who handle children should be of a cheerful disposition and an appreciative nature.

If a child lives with criticism,
He learns to condemn;

If a child lives with hostility,
He learns to fight;

If a child lives with ridicule,
He learns to be shy;

If a child lives with jealousy,
He learns to feel guilty;

If a child lives with tolerance,
He learns to be patient;

If a child lives with encouragement,
He learns confidence;

If a child lives with praise,
He learns to appreciate;

If a child lives with fairness,
He learns justice;

If a child lives with security;
He learns to have faith;

If a child lives with approval,
He learns to like himself;

If a child lives with acceptance and friendship,

He learns to find love in the world.

Latent in man are both noble characteristics as well as vicious tendencies. It is strange that the vices latent in man seem almost natural and spontaneous, whereas the dormant virtues have to be brought to the surface with great effort. As one advances in years, activating and developing the potential of mudita becomes more and more difficult -- though not impossible. Seeds will not take root in hard and crusty soil. One has to loosen and soften the soil if one expects shoots from seeds. In children the heart is tender and seeds planted therein will take root early and grow fast. So the best time to activate and develop the positive and saintly tendencies which lie dormant in every human being is during the tender years. When a child receives praise and approbation, he will naturally learn to give it to others for he knows the joy of recognition and appreciation.

Envy and jealousy are the chief opponents of mudita, or appreciative joy. These noxious qualities arise partly out of a lack of confidence in one's achievements and one's capacity to achieve. Dislike, boredom -- nuances of the Pali term //arati// -- may be considered as enemies of mudita. The opposite sterling virtues which can vanquish these enemies are loving-kindness, //metta//, and compassion, //karuna//. Mudita is placed third in the listing of the Brahma Viharas, for mudita is the natural outcome of the two preceding benign mental states. Metta and karuna are the forces that urge one to alleviate the sufferings of others with purely altruistic motives, expecting nothing in return -- not even gratitude. What matters to the Buddhist is the little bit of joy he has brought to another's heart by relieving him of even a little bit of sorrow, of suffering. Little do people realize how a kind word, a warm smile, a loving touch can act as a balm to a sorrow-laden heart. We can now see how mudita becomes a natural result of metta and karuna.

Too often people are much more ready to sympathize with the misfortunes of others than to rejoice with them in their good fortune. Where is a definition of a friend: "What are friends? Are they not dear sweet people who abuse you behind your back and take an inward

deep pleasure in hearing of your faults and misfortunes?" We have to take ourselves to task whenever we recognize these psychological perversities within us, and with great effort try to eradicate these unwholesome tendencies which seem to be deep-rooted.

We have to be honest with ourselves and look within. Whenever traces of envy or jealousy enter our hearts, we should recognize the emotion as one which is unwholesome. We should also make an effort not to let it take hold of us. Let us ask this question: Why are we envious? Because someone possesses something we do not. Why do we not have that which we want, that which would give us joy? The answer lies in our own //kamma//. In the light of the Buddha Dhamma no one is to blame but ourselves. The greatest sorrow for a woman is the inability to bear a child. Why accumulate more bad kamma by envying those who have children? Unwholesome states of mind such as hatred and anger are said to be the causes of infertility. So why promote such a state in a future birth too by continuing that evil train of thought? This line of thinking, of arguing, needs very great effort. It is not easy. That is why the Buddha praised effort, //viriya//, as a noble virtue. "If it were not possible to do good I would not tell you to," said the Buddha. This mode of thinking helps to eradicate delusion -- //moha//. The source of all unwholesome kamma is ignorance of moha. When the vail of moha is lifted, one sees clearly that craving is the source of all sorrows. Craving gives rise to jealousy, envy, covetousness, avarice, greed -- all enemies of mudita.

Let the fertile woman not look down upon her less fortunate sister who is denied the great joy of motherhood. Let not the one endowed with beauty scorn her plain-looking sister. Let not the wealthy insult the poor. After all, we must remember that this earthly existence is but a short sojourn in our journey through Samsara. The Buddha says there is no one on earth who has not in a previous existence been a mother, a father, a sister, a brother, a child to us. So let us suffuse the whole world with metta, with karuna and with mudita. This is why the Brahma Viharas are described as //appamanna// -- illimitables (all embracing). They are so-called because they find no barrier or limit. They embrace all living beings.

Jealousy can poison a man's system, mar his character, and ruin his social relationships. And what is life but a series of relationships? It is only in death that we are alone. Today jealousy and greed for power have poisoned the mind of the world. We now witness jealousy on a global scale. We are destroying each other and our home -- the earth. The situation at the present is so very grave that we can no longer talk of individuals or groups or nations. We have to speak for Earth. Carl Sagan, the eminent astronomer, exasperated by the wanton destruction of our beautiful little planet and its resources asks, "Who speaks for Earth?" The practice of mudita never seemed to be as important as in the present day. The forces of evil seem to have been unleashed in full measure in human hearts the world over.

Advances in science and technology have been of immense value to man's material progress and development, but the negative by-products of this progress are truly frightening. Destruction of natural resources, pollution, unhealthy rivalry and dangerous competition have reached such colossal proportions that life on earth is threatened. Discoveries and inventions in the fields of science and technology should be for a better and more comfortable life. But now many of those discoveries' are a threat to life itself. It is indeed depressing that the irony of this situation is not considered with sufficient concern. The ills of the world are insidiously increasing so that there is a growing sense of cosmic gloom and defeatism.

Man's predicament as perceived by the modern poet, George Barker, is embodied in the following words:

When will men again
Lift irresistible fists
Not bend from ends
But each man lift men
Nearer again.

Many men mean
Well: but tall walls
Impede, their hands bleed and
They fall, their seed the

Seed of the fallen.

See here the fallen
Stooping over stones, over their
Own bones, but all
Stooping doom beaten.

Whom the noonday wishes
Whole, whom the heavens compel,
And to whom pass immaculate messages,
When will men again
Lift irresistible fists
Impede impediments
Leap Mountains, Laugh at Walls?

Looking on, dejected and dispirited, is not the solution. We have to struggle to save ourselves and our planet. This is why institutions like the United Nations Assembly exist. Though satisfactory results may not always be forthcoming, the fact that while a section is destroying, inventing weapons of hate, another section of mankind is arguing, demonstrating, petitioning for peace. As long as such forces opposing evil are in existence, there is hope. This means that there is still sympathy and love in men's hearts for their fellow beings. So we must be hopeful. Conflict is eternal; conflict is natural. Conflict helps us to rediscover lost values. We must not see only hatred in conflict. Conflict is the natural prerequisite of a satisfactory solution.

A section of the world today is enveloped by the thick veil of delusion. Hence their inability to see the truth. Failure to perceive the Truth is delusion. So it is with persistent effort and enduring patience that those who wish to be noble and serviceable must sublimate themselves and serve humanity, both by example and by precept. The cultivation of mudita and the practice of this virtue can relieve humanity of the suffering it has brought upon itself. Those with right understanding must by personal example work out salvation for themselves and for their fellow beings.

Diligent practice of mudita will make a person more amenable, flexible, and understanding. He will learn to live outside himself. He will experience a new kind of happiness, the joy of sharing. This virtue will elevate him to eradicate the cankers of jealousy and egoistic craving; "We" and "ours" will be substituted for "me and "mine." Wholesome camaraderie will build up, and he will gradually embrace the whole world with loving-kindness -- //sabbe satta bhavantu sukhitatta//. The ego will gradually disintegrate, and he will gain insight into //anatta//, the Buddha's central doctrine. The fetters of attachment to self will break first, and with it all other fetters of attachment, which will lead him gradually toward renunciation.

The Buddha advocates the sharing not only of material resources, but of spiritual resources as well. The transferring of merit to our dear departed ones is a truly beautiful sharing. Our loved ones who are no more with us physically feel such a sense of joy in the thought that they are not forgotten; the joy that accrues to them by our enlightened acts is //anumodana//.

Mankind is on the eve of a nuclear war. Sure and certain destruction will be the fate of the human race if war breaks out. Now is the hour to muster benign forces within the human heart on a global scale. The virtues of metta, karuna, mudita and upekkha must be practiced to combat the degrading forces of greed and hatred which cause dangerous divisions. Once the sparks of divinity in men's hearts are released, all divisions of creed, colour, religion and race will recede into insignificance. Then only one creed will be in evidence: the creed of humanity. So let us activate, cultivate, and develop the sublime qualities -- Brahma Viharas. These powers hidden within the human heart are yet untapped, yet it is through these powers that humanity can be saved. This seems to be the way -- the only way out of the present entanglement.

> "The inner tangle and the outer tangle --
> This generation is entangled in a tangle.
> And so I ask Gotama this question:
> Who succeeds in disentangling this tangle?"

The answer of the enlightened One given centuries ago embodies the solution to the present tangle. It is, in fact, the answer to every generation -- past, present, future. "He who succeeds," says the Buddha, "in disentangling this tangle, is the wise man, established well in virtue, who has developed consciousness and understanding."

* * *

METTA

Metta is a sincere wish for the welfare and genuine happiness of all beings, without exception. It means that which softens one's heart -- a friendly disposition. "Just as a mother protects her only child even at the risk of her own life, even so should one cultivate loving-kindness towards all living beings." It is not the passionate love of the mother that is stressed here, but her sincere selfless wish for a genuine welfare of her child.

Metta transcends all boundaries of caste, class, race and religion. It is limitless in size and range (//appamanna//); it has no barriers, no discriminations.

Think of the number of instances during a day when your actions are colored by discrimination. When your unfortunate servant boy accidentally breaks an article, you shout at him. When your own child does it, you tolerate it. That servant boy is also somebody's child who, through bad kamma, has come under your roof to do your menial work -- to do your bidding.

When you strike a blow across your dog's back for trampling your flower bed, do you realize the unwholesome state of your mind at the

moment of such action? You may even be a person who recites the gathas and the suttas, who goes to the temple, who observes the Eight Precepts, who listens to sermons, who gives alms. But at the moment of such discriminating actions you have turned away from the Dhamma.

At some time you may bide the time, waiting for an opportunity to take revenge on someone who has slandered you. During that period of waiting -- please think of the Buddha. Enact in your mind's eye the story of Cinca Manavika or the courtesan Sundari. Then your little embarrassments and heartaches will fade into insignificance.

Metta is described as a divine state (//brahma-vihara//) which cannot co-exist with anger or hatred. "Hatreds never cease through hatreds in this world. Through love alone they cease. This is an eternal law." Goodwill, loving-kindness, benevolence and universal love are suggested as the best renderings of the Pali word //metta//. A point to be clarified here is that metta is not synonymous with ordinary affection. The world cannot exist without mutual affection. Between parents and children, between husbands and wives, between teachers and pupils, between friends, exist varying degrees of affection. This affection is natural, and metta has to be cultivated. A benevolent attitude is the chief characteristic of metta. One who practices metta is constantly interested in promoting the welfare of others -- not only in his family and friends. Such a person is sincere when he says: "May all beings be happy."

Another very important point that should be clearly understood is that in exercising metta, do not ignore yourself. How often do you say, "Oh, I got so angry with myself" or "I can never forgive myself"? Some hasty words or actions on your part fill you with resentment towards yourself. Remorse, though a fine corrective, is an extreme form which can bar your progress when indulged in again and again. There are times when you may even make yourself mentally and physically ill. So the most important person to make friends with is yourself.

Remorse, regret, diffidence and hopelessness are negative tendencies the existence of which can never result in a friendly

disposition towards oneself. Metta is a positive quality. Unless you feel friendly toward yourself, you cannot be friendly towards others. To the world outside you may appear to be well-disposed towards others and give the impression of possessing a benevolent, magnanimous nature. But be aware of yourself. Be honest with yourself. Honesty is the starting point towards self-purification.

"To thine own self be true
And it must follow as the night the day
Thou canst not be false to any other man."

All men have their frailties. What is meant by making friends with oneself does not mean that we expect to find within ourselves only that which is good and perfect. We talk about understanding people. Let us understand ourselves first. Let us recognize our strong points and feel satisfied about them. Let us recognize our failings, and strive towards lessening or eradicating them.

"Whoever looks for a friends without imperfections will never find what he seeks."

"A faithful friend is a sturdy shelter.
He that has found one has found a treasure."

"He who throws away a friend is as bad as he who throws away his life."

Let us not throw away our lives by throwing away that friend that is in us.

"I" or "myself" should be the central or starting point. Metta radiates from oneself to others, so it is very important to feel a sense of goodwill, friendliness, well-being towards one-self. This is a subtle point which has to be clearly understood.

The Buddha radiated metta equally towards his adversary Devadatta,

Yasodhara his royal wife, and Patacara the demented woman, his royal father Kind Dusshodana and Sopaka the humble low-caste youth.

Metta then should be extended towards friend, foe and mere acquaintances alike. The identification of oneself with all beings (//sabbattata//), making no difference between oneself and others is the culmination of metta. The ideas of "me" and "mine" are building blocks of barriers. Metta dissolves barriers and loosens all constraints. With the diligent practice of metta, division evaporates and humanism is realized. Such a mind is free from ill-will, and this freedom is bliss or //sukha//.

Ill-will is the antithesis of metta. Anger, hatred, aversion are related qualities. Metta cannot co-exist with such unwholesome attitudes. Disparaging, condemning and belittling others is possible only through ill-will. Pointing out another's faults with the intention of leading him towards good does not mean a lack of metta. Parents, teachers and elders often have to resort to various methods of correction and reform where the young are concerned. But one has to be very watchful when one is engaged in such activity. The motive has to be analyzed carefully. Elders sometimes react in anger. At such moments one must question oneself: Was it to avert a disaster to the other that one acted so? Or was it merely giving vent to one's own anger which oppressed one?

A mother who could not convince her son that the path through the jungle was unsafe and that he should take a safer route exclaimed in despair, "May a bear maul you!" The son departed and the mother radiating metta towards her son, hoped and prayed that no harm should befall him. Though the jungle was infested with wild animals, the loving-kindness which radiated from the core of the mother's heart towards her son was a weapon against the fierce jungle beasts. Metta, one has to understand, is a powerful weapon against evil -- and protects one from many pitfalls in life.

Metta is a constructive healthy force with the power of combating hostile influences. Just as anger can produce toxic effects on the system, benign thoughts can produce soothing health-bringing physical

effects. Many instances in the Buddha's life illustrate the fact that the peaceful thought vibrations of the Buddha produced salutary effects, so much so that the intoxicated elephant Nalagiri and the wild Angulimala were completely subdued. The magnetic power of metta is indeed deeply rewarding. Metta has a liberating influence on the one who possesses it and on the one to whom it is extended.

In our day-to-day lives with its trials, tribulations and complexities, the art of being friendly is fast disappearing. We act like automatons. We are so wrapped up in ourselves, in our own affairs, that we hardly think it is necessary to spend time over anything that is not connected directly to ourselves and our affairs.

We must teach our young the value of a friendly disposition. We must do it by example more than by precept. In our homes, in our schools, in our places of work, if this simple quality of friendliness is allowed to pervade the atmosphere, our corner of this earth can be a little haven -- a true home.

Let us fill our hearts with metta, and let us make our hearts a home where peace and love and friendship will dwell.

"I read within a poet's book
A word that starred the page:
'Stone walls do not a prison make
Nor iron bars a cage!'
Yes, that is true, and something more,
You'll find wherever you roam
That marble floors and gilded walls
Can never make a home.
But every home where Love abides
And Friendship is a guest
Is surely home, and home sweet home
For there the heart can rest."

* * *

GETTING HOLD OF MYSELF

I told myself never to do certain things:

Never to fly into a rage when things have gone wrong,
But something is simmering inside me;
Then I try to get hold of myself
But I can't!

Never moan and lament over loss and disaster,
But something is writhing inside me;
Then I try to get hold of myself
But I can't!

Never be elated over triumphs and victories,
But something is dancing inside me;
Then, too, I try to get hold of myself,
But I can't!

Exasperated, I try and I strive
But I can't!

I just can't get hold of myself,
Can you?
If you can, please let me know how.
Yes, I can.
And you can, too,
If you turn to the Buddha.

"Irrigators lead the waters.
Fletchers bend the shafts.
Carpenters bend the wood.
The wise control themselves."

Just as a water-course is dammed and directed through channels towards a chosen direction, so too the mind must be bent and consciously directed towards good, towards virtue, towards righteousness.

To amass wealth, to dig up the treasures from the bowels of the earth, man makes laborious efforts and spends enormous sums of money, but to dig up the invaluable treasures of the mind, man makes little or no effort. But to make the effort man has first to realize, he has first to understand the mysterious and mighty potentialities hidden within his mind.

On the other hand, if, though well aware of the natural destructive forces within him, man makes little or no effort to curb them, he thereby causes untold misery to himself and to others.

Latent in man are both saintly characteristics and destructive tendencies. It is strange that too often the vices latent in man seem almost natural and spontaneous, whereas the dormant virtues have to be brought to the surface with great effort. It is worth noting that every vice possesses its opposite, a noble virtue which may not appear to be natural and automatic, yet which lies within the range of every person.

And so man lives enveloped in miseries of various types. Man is never happy, never satisfied, always frustrated, always wanting something more, something new. His mind is constantly in turmoil, and the misfortune is that he thinks that this has to be the natural condition common to all. This is delusion, or //moha//.

> "Blind is the world.
> Few are those who clearly see.
> As birds escape from a net,
> few go to the blissful state."

It is a pity that man does not realize that all these fears, sorrows, phobias and miseries are mind-made -- and can be eliminated.

A man can live in a constant state of bliss and joy devoid of unnecessary sufferings and live life to its fullest if only he would live the word of the Buddha, for the word of the Buddha embodies peace. This is why the arahats often uttered:

> "Calm in mind, Calm in speech, Calm in deed, who rightly knowing is wholly freed, perfectly peaceful and equipoised."

A desert traveler with parched lips and burning soles will be gladdened on hearing that an oasis is not far off. But he will not experience real joy until he tastes its waters with his lips, and dips his soles in the cool waters. In like manner the word of the Buddha gladdens our hearts, but we should not stop until we have tasted the bliss of that noble state which is the panacea, the only panacea, for all the ills of the world.

> "There is no medicine comparable to the Dhamma. Taste of it. Drink it, O monks."

The Dhamma is to be lived, not merely to be read about or listened to. Listen. Think. Practice.

In our day-to-day lives, in the course of being engaged in our daily chores, we should think of the innumerable times when we have neglected the word of the Buddha. Yet the incense chamber of the Buddha should be created within our hearts, and that fragrance must pervade every thought, every word, every action of our waking life.

"Purify your mind," said the Blessed One. Now think of the numberless unwholesome thoughts that daily pollute the mind. We speak and we act impulsively, rashly. Our words and our actions are often harsh; we cause pain of mind to others, which in turn brings on remorse. A whole train of unwholesome thoughts are unleashed as a result of our inability to control our mind. We get angry. That anger even results in chemical changes in the body which can be injurious to

our health, and to the well-being of others. And then we repent for a lifetime a few words uttered impulsively.

So, realizing the unhappiness we bring upon ourselves and the suffering we cause others, we must first understand and accept the fact that we are not on the right path. What is the remedy? Do not let the mind drift. Take hold if it. Cultivate it. What is cultivation? It is meditation. It is a process of mind cleansing. What are the steps leading to purification of the mind, which is the heart of the Buddha's message?

1. To know the mind -- that is so near to us; and is yet so unknown.

2. To shape the mind -- that is unwieldy and obstinate, and yet may turn to pliant.

3. To free the mind -- that is in bondage all over, and yet may win freedom here and now.

-- "The Heart of Buddhist Meditation,"
by Nyanaponika Thera

To know the mind one has to watch it from moment to moment. Take a few minutes off your daily chores and sit down in a quiet place and be mindful of your thoughts. Watch carefully the thought processes coursing incessantly through your mind like the rising and falling away of the ocean waves, but continuous -- in a never-ending flow they arise and they fall away. Recognize each thought as pleasant or unpleasant, as the nature of the thought may be. We have to be honest with ourselves. We must recognize jealousy as jealousy, know it to be unwholesome, cast it aside and substitute its antidote or opposite -- which is appreciative joy or mudita.

We can gradually increase the period of watching by a few minutes each day. After some time we will find that when watching and perceiving, all shades and nuances of thought pass through our mind.

With practice, this process will become automatic, natural and effortless, even while we are engaged in our daily activities. This is as it should be -- a very desirable condition for our well-being, for then we will be constantly mindful. An action performed with mindfulness will be a skillful action. The result, or //vipaka//, of such action will be pleasant and good. So constantly our mind will be suffused with satisfaction, joy and bliss.

Let us look at a few of the common unwholesome states which too often pollute our minds:

Anger is a destructive vice which can be subdued with loving-kindness or metta.

Aggression is another vice that is responsible for much human suffering, errors and atrocities. Its antidote is compassion or karuna.

Jealousy poisons one's system. It has a corroding effect on a person like rust on metal. It will destroy a person. Appreciative joy or mudita is the remedy.

There are other universal characteristics that upset the equilibrium of man. They are attachments to the pleasurable and aversion to the non-pleasurable. The opposite force is equanimity, or //upekkha//, which alone can combat these two subtle but most prevalent defilements ever present in the mind.

Impregnated in the vices mentioned are the germs of a dreaded disease which seems to be taking its toll of many human lives today. Self-destruction, depression, a sense of hopelessness, despair, gloom, pessimism, meaninglessness of life, are some of the symptoms of this dreaded disease which leads to so much unhappiness. The disease is ignorance.

The cure for the disease is the substitution of the opposite virtues for each of the latent vices. This will lead to the recognition of the beauty of life, its worthwhileness, its purposefulness. The

substitution of wholesome pleasant thoughts is a recognized form of mental therapy. These virtues tend to elevate man. If cultivated with diligence, man will realize that the earth is such a beautiful place, that human life is noble, and that it is still possible to gain peace for oneself and for others.

THE BUDDHIST PUBLICATION SOCIETY

The BPS is an approved charity dedicated to making known the Teaching of the Buddha, which has a vital message for people of all creeds. Founded in 1958, the BPS has published a wide variety of books and booklets covering a great range of topics. Its publications include accurate annotated translations of the Buddha's discourses, standard reference works, as well as original contemporary expositions of Buddhist thought and practice. These works present Buddhism as it truly is -- a dynamic force which has influenced receptive minds for the past 2500 years and is still as relevant today as it was when it first arose. A full list of our publications will be sent upon request with an enclosure of U.S. $1.00 or its equivalent to cover air mail postage.

8. The Eightfold Path: Right Awareness

~~~~~~

Sometimes I think the translation of the word "mindfulness" is incorrect in two ways. Right Mindfulness is a step of the Eightfold Path and is the centerpoint of Buddhist practice. First, it's not a good translation because "mindfulness" is kind of an insipid word. "Be mindful" -- what does that mean? It doesn't have the kind of inspiring quality of spaciousness, courage, or living fully. Perhaps if you pronounced it differently and said, mindfulness, that would be a better understanding of the word and its power. But a more fundamental difficulty in even talking about mindfulness, whatever that means for us, is that the mind and the heart are the same word in Sanskrit or Pali. So perhaps a better word would be "heartfulness" -- live in a heartful way. Forget about this mind stuff all together. You could do without a lot of it, if you haven't noticed.

The Buddha very often said that mindfulness was the heart or the essence of his practice -- to be heedful or aware -- that was the road to liberation and to the deathless, to freedom from even birth and death; that is, freedom from being caught in the cyclic nature of things, stepping outside the cycle of things.

What does "mindfulness" mean to us sitting here as a group. We sat for an hour this evening or a little bit less, but for those of you who have attended regularly, we've been sitting here for a year doing something supposedly related to paying attention and being mindful. What does it mean? What are the qualities of it, what are we doing
~~~~~~

here? We sit, we pay attention to the breath, or our body sensations, or the sounds, or the people walking by, or the various thoughts and images in our mind.

To be mindful first means simply to come into the present -- to listen with our senses, with our heart, with our physical body, with our ears, with our eyes, to what is actually here in the present; the body, the heart and the mind. It's that thing I've spoken of many times before, the sign from the casino in Las Vegas, "You must be present to win." In Las Vegas, in therapy, in meditation, it's all the same thing. In order to awaken or to use our life in a skillful way, the first task is to get here, to start to live in the present moment, which means not living so much in our fantasies, in the future, not living so much in the past, in our images and memories, and reliving things that are gone already.

The first is learning to be present, which itself is a very wonderful thing, because"here" and "now" and "in the present" are the only places that we can appreciate life to begin with. Otherwise, it's kind of second-hand, what happened a few years ago -- that's a nice memory -- or what we fantasize about. Where can you really appreciate this life we're given? Only in the present.

Also, there is something else which interests a lot of people and can only be found in the present, and that is love. If you want to love a person or you want to be loved -- some of you perhaps know anyway, right? -- where does love take place? Or "when" is a better question. Again, it's a nice memory, "Gee, I was in love once or twice" -- or more in some of your cases. It was very nice. It evokes a nice thing to remember it. Or it's in the future, "Oh, if only I could meet that right wonderful person," or "this person that I live with," or "this family," or whatever, "if they would change so they would become right, then I could fall in love all over again with them or be happy with them." The only place that you can really love a person or be loved is in the present. No other possibility for it. All the rest is fantasy.

Also in the present comes the possibility of touching our intuition,

of creativity, of clarity; all kinds of things. So the first aspect of awareness is simply learning in some way to live more fully here in our present reality. If you learn nothing else from meditation practice than that, you get your money's worth -- especially since there's no charge.

Secondly, mindfulness or heartfulness mean seeing clearly. It means non-grasping, non-greed, non-hatred, it means not pushing away, and it means not going to sleep, but seeing what is present for us. Bare attention, remembering, being in the present, without trying to change it somehow, which is a hard thing to learn because we're generally planning on what we're going to make this something into next. But then what happens? We end up doing that all the time and missing all the somethings that are here, always waiting for the next one.

Mindfulness is really a way of learning to see what is here in a very clear way. People talk about learning mystical things in meditation or spiritual life. There is nothing more mystical, or startling, or bizarre, or amazing, than what is right in front of us. In my days I've done a lot of strange things. I've been to a lot of different countries on this planet, and observed //saddhus// on beds of nails in India, and strange animals in other parts of the world, and in my early days I took a number of the various kinds of psychedelics and drugs one could take, and have had all kinds of realms and weird experiences, and all kinds of things in meditation. I have never encountered a realm as peculiar, or bizarre, or as interesting as this one.

Someone said:

> The mystery of life is not a problem to solve,
> or something that you find somewhere else,
> but it's a reality to experience here.

We went to the zoo with the baby on Sunday. If you landed on some weird planet, and then you saw pygmy hippopotamuses or 300 pound

ostriches and really wrinkled elephants -- Did you ever look at elephant skin? Just amazing! -- or the kind of snakes that are there, or sloths hanging upside down, you would say you had come by your spaceship to a really peculiar planet. And yet we forget that. We start to take it all for granted. It all becomes very ordinary, and it's not. If you attend a birth, it's an amazing thing to see a baby being born out of a human body. How does that happen? How does it get in there? I know you know how it gets in there. But I mean, how does it really get in there? Like the ship in the bottle. An incredible thing happens in there, the baby coming out of a woman. And we take it for granted.

So to pay attention means to somehow have a newer or a fresher vision, to see clearly. It means to stop our judging and our planning and just see what's here, which is part of what we do in meditation; to stop and not judge a single thing; let it be exactly how it is. Let God take over for a little while and run the show rather than our minds, which get very tired, and very full, and very busy anyway, and need a rest.

Someone said:

> The classic question is: If you pay attention and you don't judge, then how do you live in the world? What part of attention or awareness is that?

That's called //sampajanna//. //Sati// is mindfulness, //sampajanna// means clear or right comprehension. It means not only do you pay attention to what's here, but then when you act in your life you also look at the context, at the suitability or the intention of it; what is present. When you act, you first have to see what's here, and then some intuition, or inspiration, or thought arises, "I'll do this or do that." It's to pay attention to where your heart is, what motivates you, what the intention and the purpose of your action is, so that you pay attention but you also note the context.

The way Joseph, my colleague and friend, answers the question when

people say, "When you just pay attention and note 'lifting, moving, placing' in the walking, or the in and out of the breathing, how can you live?" He said, "Well, I was doing my lifting, moving, placing one day on a road in India near the Burmese temple where I lived, just moving my feet and paying attention, and all of a sudden I heard 'clang, clang' of the bells, and I recognized it. I knew what those bells were. I looked up and sure enough the elephant that lived in town was coming down the road right towards me. I noted 'hearing, hearing' and 'seeing, seeing'; then I noticed the intention to move out of the way arise, and then I walked out of the way."

So there are two parts. The first is seeing what is here, living in the reality of the present, and then responding to it wisely, being aware of the situation that we're in.

At times this year I've talked in this class about another aspect of awareness which I think is really important to remember in our lives, and that is the very interesting question of why we don't pay attention; why do we go to sleep, why do we drive on automatic pilot, why do we eat three meals a day, two-thirds or three-quarters or ninety percent of it on automatic pilot? Why do we live so much not here? It's a pretty interesting question, maybe even more interesting than saying, "One should pay attention or live in the present." How come we don't?

There's a story:

> When Krushchev pronounced his famous denunciation of Stalin, someone in the Russian Congress Hall was reported to have said, "And where were you, Comrade Krushchev, when all these innocent people were being slaughtered?" Krushchev paused, looked around the hall, and said, "Will the man who said that kindly stand up? Tension mounted in the hall. No one moved. Finally Krushchev said, "Well, whoever you are, you have your answer now. I was in exactly the same position then that you are in now."

Why is it that we don't pay attention? One reason is fear, that if

we actually come into the present, there are certain things we have to deal with that we haven't had to in our lives. For some people it's boredom. We're really afraid of being bored. For some it's loneliness. For some it's grieving, something in their hearts that's not finished. So it's better to distract yourself, see a lot of movies, talk to people, keep yourself busy, stay on the phone, and keep yourself working, so you don't have to feel certain things.

Another reason we don't stay awake is habit. You could be very peaceful, not have any grieving to do, and be comfortable being alone, and so forth, but it's like there's this huge flywheel inside. And there you are. It's a quiet day, you're just sitting down in the park, and all of a sudden out of nowhere you start thinking about what you'll do next week or next year, making plans, and playing back memories, because there's this powerful habit of thinking. It takes training to kind of release the clutch and let it slow down. That's part of what meditation is about.

Also, pain is another reason, because if you live in the reality of the present moment, what do you experience? Up and down, light and dark, night and day, and pleasure and pain. And if you don't like pain which a lot of people don't -- understandably -- then what you have to do is manufacture some fantasy, to live in a lot of thought and busy-ness so you don't feel it. However, you rob yourself of something very, very important when you do it, which is that you rob your life of living, of heartfulness, of fullness, of vitality, of your existence.

To live in the present means that you have to face your boredom and your loneliness when they come. They're not there all the time, and they're not so bad actually when you come to terms with them. They're a little scary but they're not so terrible. And you have to face the fact that there is this habit of greed, and hatred, and fantasy, sort of a machine that spins out thoughts out the habit of it. So you have to be willing to be aware of pain as well as pleasure. But if you are, the rewards are fantastic, because then you can really experience being with another person, walking down the beach, taking a walk in the park, walking outside and seeing the stars.

It's really very interesting to start to pay attention to when we go on automatic pilot. If you were to look at something in your meditation, rather than trying to be aware, try to be mindful of when it is that you go to sleep, what it is that's hard for you to be aware of. That is something that is quite interesting to learn about. Use it as a signal. "I haven't been very mindful today. I wonder what's going on? I haven't been very mindful this week. I wonder why? What's happening? Oh, I'm sad. It's hard to be sad, so I have to keep myself busy," or "This thing is coming up that's difficult to deal with, so I think a lot and plan, rather than just notice that it's really hard." We learn somehow to find the center in the moment rather than toppling forward or into the past.

If you let yourself do that, then everything stops. And one of the most wonderful things about awareness or heartfulness or mindfulness is that it allows us to come to rest, because there's really only one place to rest, which is in the present.

We're householders, we're not monks and nuns. And the question often asked is: In order to be mindful does it mean we have to talk slowly and sit many hours a day and go into an ashram or some monastery? How can we bring mindfulness, heartfulness, wisdom here into our lives? How do you do that? Well, of course, as I said in the past few weeks, sometimes you do have to look at your life and see if you want to slow it down a little bit, if it's crazy, if it's real busy. Because our culture is a little bit mad in that way, you might need to take a look and see, "Gee, is it time to stop doing a few things, to make a little more space, to slow down?"

Fundamentally, "mindfulness" means to learn to be aware where we are. If not here, where else? If not now, when? Mindfulness is the opposite of "if only," it's the opposite of hope, it's the opposite of expectation. It has in it a certain kind of contentment, not that one might not choose to change the world, but a kind of acceptance that this is really what we get, these sights, these sounds, these smells, these tastes, these perceptions. This is it! Then in another moment, there will be another "it." It's not something else. "I know that

this is all it is, but this is it." When one accepts it, then one can come to rest.

Mindfulness in a way is the opposite of grasping, or attachment, or identification. And it can go very, very deep when we allow ourselves, because what we start to see -- if we slow down a little bit and pay attention -- is how it is a kind of conditioned phenomenon, like a machine, the mind spins this stuff out in a very orderly way by habit -- thoughts, fantasies and memories. The world works in certain conditioned patterns, and that's it's nature, and it's all impermanent and quite ungraspable. Where is yesterday? What happened to your weekend? Where is it? What happened to 1984, your 20's, or whatever it was -- maybe you're 20 now. For some of you, your 20's, 30's, 40's and 50's, where did they go? They all disappeared, gone. Isn't that an amazing thing?

It's a very profound thing to start to be aware of life coming out of nothing and disappearing into nothing. A day appears for awhile, and then it's gone. It can't be grasped, it's like a bird flying. You cannot hold time and fundamentally you can't hold yourself.

So the spirit of mindfulness is learning to live in an awake way. As the Buddha said, "I'm not a man, I'm not a God. I'm none of these things. I'm awake." How can I convey the spirit of this? There are songs from the monks and nuns who lived after the Buddha died that are in these poems. If you read//Therigatha//, the songs of the sisters, there are many enlightenments that take place while they're walking through the forest. One nun is in the forest talking about how happy she is that she doesn't have to do housework anymore and she drops a cup or something like that on the ground, maybe it breaks, and all of a sudden she's enlightened. She says, "Oh, that's how it is." Things arise for a while and then they pass away. If you can accept that and see that -- each day, each moment, with each person, to experience what's there -- and then leave it and go to the next, you can live in a deeply free way. So it really has the spirit of aliveness to it.

In the monastery it was beautiful. We had all these rules, 227 major precepts and then some hundreds of minor precepts, and then they

told you how to fold your robe, which side of the bowl you should put down, and how you should clean it properly. Even how to pee. There is a particular way monks are supposed to pee. You're supposed to squat down, you can't stand up, and you can't pee into water where there are obvious living things or on plants because you might harm them, and things like that. At first when I read this, I said, "Well, what's the difference if I squat down? Nobody is looking, first of all. These rules are dumb." But after awhile of living them, in this beautiful forest monastery, where there wasn't anything else to do besides meditating and following the rules, which would drive you crazy initially, what you began to see is that somehow they brought you to see that everything was precious, that everything was worth caring for; that it mattered where you peed, that you could pee on the ground and not on a bush, and not harm it; or that it mattered how you took care of your bowl, which was one of your very few possessions. It was a gift from people who said, "We want to support you because we think that monasteries and what you're doing is valuable in the world and reminds all of us of something precious. So we'll give you a bowl."

You take care with your bowl, you take care with your robe, you take care with your car, you take care with your house, you take care with your clothes, because to be aware in some way means to remember the preciousness of life and to begin to take care with the earth and all the creatures and things on it. It's to be aware of ourselves and our bodies, of our actions, to be aware politically, to be aware economically, to be aware socially as well.

Imagine if you were told that you have some disease, let's say AIDS because there's a lot of it that's happening, and it's both scary to people and very immediate and present, and real important to look at. Someone said, "Well, at best you have four years, maybe you have a year to go." How would you start to live that year? Things would change for you, I assure you. Your life would become a lot more alive and precious for you. Or imagine that you've been in prison for a long time, as people are in many, many countries of the world. Amnesty International said that 55 countries have political prisoners who are imprisoned and often tortured because of religious views. The

majority of the large countries on the earth imprison people for what they think. It's really painful. And then you were let out after a long time in prison, how would it be just to walk down the street in San Anselmo? What would the trees be like? Just the experience of being free, watching the cars, being able to go into a confectionery store and order any kind of sweet that you wanted, or just seeing the sky and feeling the air and being able to decide whether you're going to go down the block to the right or to the left. It's that spirit of heartfulness, of mindfulness that it comes to. It's not so much that you're supposed to be tedious about it at all, but it's somehow much more the spirit of an appreciation of life and of seeing it in a clear way.

I remember when I was seven years old I spent a whole summer in bed. I had this kind of infection and I couldn't leave the house. And then when it ended and I finally could go out, I was given something like a dollar, which seemed like a lot of money at that time, and I went and I bought a ball and some bubble stuff, and I went to this big park near my house. It was like being let out of prison for a kid being in the house for a whole summer. I was so happy. To this day I remember the sun was shining, I could blow my bubbles and turn cartwheels and throw my ball and do anything I felt like. It was so wonderful. In some ways, that's part of the spirit of bringing awareness to our life. It also means, as I said, that we have to be willing to face that which is difficult, to open to what Zorba called "the whole catastrophe," and to appreciate it in some way. It's really quite a trip.

So first it means to take care with the earth, to learn that awareness means to receive, to see the preciousness of things. Secondly, then it allows our world to teach us, to let it teach you very simple truths which are the most important. For example, one monk went to his master after a long time of training and begged the teacher to give him enlightenment. The master led him over to a bamboo grove. He said, "See that bamboo there, how tall it is? See that one over there, see how short it is?" And the monk was enlightened.

Things will teach us when we see them afresh, when we see them anew. We see them for a minute, we see the ungraspability of anything, of our own bodies -- they change -- of our thoughts, of our feelings, not to speak of the people and the things around us. -- changing, ungraspable. And that they do. Sometimes they're big and sometimes they're small. That's the way that things are. It teaches us the preciousness of life. When we pay attention we can learn. We can learn from our families. We can learn when our hearts are closed and when they're open. We can learn what it means to be attached, what it means to let go and be freer. We can learn about all the forces in the mind. We can learn about doubt and fear and anger, through awareness. We can learn about love and kindness through attention. It's really universal. We can learn to play tennis in a better way.

To train ourselves to be aware is the gift of the Buddha. He said: Here, I'll give you a gift that can make life come alive for you, that can bring both happiness and freedom. And it's a very simple thing. Learn to train yourself to live more in the present. Do what it takes to do that in your life. How can we do it? Here we are, householders, right; not like we have all day to sit and walk in some monastery.

Some hints perhaps. First of all, as I've said in previous evenings, one of the most beautiful expressions of awareness comes from Zen master Thich Nhat Hanh where he says: See if you can learn to wash the dishes in order to wash the dishes. Usually we wash the dishes in order to get the dishes clean, right, and then we can get on and do something else, right, or talk to someone. Did you ever do anything like that, where you just did it in order to do it? Maybe we let ourselves do that on vacation. You go hiking in the Sierras, and if you're not too driven -- "Can I get to this camp site by this hour," or something -- and you let go of that a little bit, you just walk along the mountains in order to be walking, everything becomes what it is. It's beautiful.

That's the first hint, to start to take some things in our lives and do them for their own sake. Does that make sense to you? Another way is to listen with your heart a little bit more, to try to pay

attention to what it's like when you're with people, and see if you can let your words come out of your heart, to say really what you feel inside, what you care about, and to listen with your heart rather than your mind. That's a very good way to wake up; especially the people you live with -- your kids, your spouse, family, and things like that.

People say, "How can you be mindful at work? I'm a writer," or "I'm a mathematician." These are some of the questions I get at retreats. "How do you do math mindfully? You have to think and ruminate." Or, how do you write mindfully, or watch a movie? The best I have been able to come to in that is that when you write, just write; when you watch a movie, just watch the movie; when you read, just read. Not writing and also thinking how people will view it when you're done writing, and planning, and seeing how many more minutes you have to write, and so forth. Just be present for the writing. It doesn't mean to think or be in some special mode. Just do what you do. Not so complicated. When you do math, do math.

Of course, sometimes it gets a little more complicated than that, and at retreats I've often told the story of Zen master Soen-Sa-Nim who generally teaches his great Zen teachings, "When you walk, just walk; when you're hungry, eat; when you're sitting, just sit." So there he was at the breakfast table eating breakfast and reading the paper. Students who saw this were very upset. "You know, you're the Zen master. You tell us, 'When you eat, just eat,' and here you are eating and reading. How do you explain this?" He said, "Very simple. When you eat and read, just eat and read."

The spirit of it is not so complicated. It's not to make something really false or different about it. It's more the quality of being a bit more where you are. I think that comes from Yoda in Star Wars. Another thing is to remember the power of the act of coming into the present.

I told the story a few weeks ago of Robert Aitken-roshi who wanted to go to Japan to study Zen during the Korean War. It was considered a war zone and people weren't allowed. When he went to the consul or the ambassador who was a very learned and dignified Japanese man, he

was told, "I'm sorry, we just can't have visitors; it's war time. The American government doesn't want it and the Japanese government is following that." The ambassador offered tea. It was very nice. He said, "Why do you want to do that? I mean, there's this war we have to stop." He took his cup of tea and he picked it up and he drank it very carefully and silently, and then he looked at the ambassador and said, "Taking a cup of tea I stopped the war." With that the ambassador was wise and he understood that, and he arranged a visa for him to go to Japan to study.

What we do, if we do it with our full heart and our full being, is a way of bringing the planet back into balance. All you have to do is look at the news or read Time or Newsweek; it's crazy. And it's crazy because it's all mind and thought and going in circles and it's not connected with the heart and the earth. Taking a walk you stop the war, taking a cup of tea, sitting a little bit every day, you stop the nuclear arms race because you let yourself get quiet and feel the earth and the air, and then your actions and your vibrations and the effect you have on other people, and maybe even the concerns that you act out politically, all come from that connection with yourself and with the earth around you.

I have a good friend who is lawyer from Harvard Law School, a very fine lawyer. He sits through lots of meetings. He said he has really learned to work with his breath. Communication is kind of redundant. You could probably tune in on every tenth sentence and get most of the meaning of things. He is really in love. He says, "I love my breath. It's much better than what goes on in the meetings." So you can use your meditation in grocery stores standing in line waiting for checkout, or traffic jams. Wonderful times to meditate.

I remember sitting at my teacher's cottage. He sort of sat in a little chair, and people would sit around and he would receive visitors. I was sitting there and waiting for him. It was a really hot day. Usually they had iced coffee on a very hot day in the tropics. Iced coffee is first so good because it's so cool and delicious; and the Thai coffee is half sugar. And secondly, since you don't eat except one meal in the morning, to have a big glass of dark

iced coffee filled with sugar is like about three or four hours of caffeine and sugar stimulation before it wears off. It's great sitting. It was a great drug for sitting, there's no question about it. I was kind of in the doldrums. "I've swept my cottage, now I'll go over and I'll sit and I'll wait." And on hot days like this, if the teacher sees a lot of people sitting around, he says, "Okay, you can bring some iced coffee for these poor starving monks," or whatever. So we sat. I kept thinking about how I was going to go back and meditate. I'd get to my cottage and then after I had it, for two or three hours I would be very alert and awake, and I'm kind of sitting there sweaty and hot and a little bit depressed and just waiting and waiting and waiting. He must have known it, and I'm waiting and waiting. Hours go by and other people come by and I'm waiting and waiting. I think, "God, when am I going to get this wonderful coffee so that it will perk me up and I can really meditate?" Waiting, waiting. It never came. Finally, it became real clear after a lot of hours of waiting; waiting to meditate.I was sitting there doing nothing. When are we going to meditate? "I'll do it when I get to the sitting, then I'll meditate," or "I'll do it tomorrow." Somehow it's to remember that it's here in the present we're talking about.

In some way, mindfulness means coming back to our real home, coming to rest in the present. It is our real home. And our real home is not connected with grasping, our feelings, our bodies, our thoughts, our images, or all the things that are changing -- but it's the ease that we can find in being with up and down, light and dark, and all of this duality which is changing. With an open heart, with heartfulness, with mindfulness, being with it as it is, then receiving it and deciding, if we will, what things to choose to respond to in a wise or compassionate way.

This is Don Juan to Carlos Casteneda:

> For me the world is incredible because it is mysterious, awesome, stupendous, unfathomable. My interest has been to convince you that you must learn to make every act count in this marvelous world, in this marvelous time, I've tried to convince

you. You must realize that you are going to be here for only a short while. In fact, too short for witnessing all the marvels of it. I wanted to convince you that you must learn to make every act count.

The spirit of awareness or mindfulness really means coming into our life, into the physical senses, into the feelings, into the movement of mind, and into the heart, and living each day from our heart. What do we care about? Taking a concern and a care for the preciousness of the earth. In the end what one discovers is that mindfulness and love are the same thing. To be aware, without grasping or resisting or trying to change -- to receive what's here -- is to love it; that they're not really separate, that the heart and the mind come together. Or as one of my teachers said: The mind creates the abyss and the heart crosses it. The mind creates distinctions, and coming into the present, into the heart, resolves all of that.

The talk in a way is a reminder. Let me ask you a few questions as a way of ending. First of all, what keeps you, what keeps each of us from really paying attention in our lives, from living more fully? Just think about it as I ask. What fear or difficulty in your life keeps you from living here in the present? What illusion or misunderstanding in your life keeps you from living here in the present? What would you have to do to make your life really support living mindfully? What would you have to change to make a real support for this mindfulness or this heartfulness? What would you have to change in your life to allow yourself to love more fully? And the last question is to ask in your heart should you make those changes. See what it said. Generally, it has a good answer.

Even mindfulness, however, cannot be grasped. There are days when you're going to be more mindful and days when you're less mindful. And it too, like all things, comes and goes. What you can do is nourish and find ways. That's what we do together here. We sit together, sometimes we have discussions and questions, sometimes I talk to myself out loud and you get to participate, sort of listen to it. It is a way to remind ourselves that there's something really precious. Spiritual life is pretty simple. It's not easy but it's pretty

simple.

ÉÍÍÍ

In the best case they may result in sporadic practice and in the worst case, they lead to fracturing ourselves, making two, three or four people out of ourselves when we aren't even one whole yet. Namely, the ordinary person doing all the ordinary worldly chores and the other one who becomes spiritual at certain times in diverse ways. Meditation, rituals, devotional practice, chanting, certain places, certain people can all be added to our lives but they are not the essence of our spirituality.

Our practice consists of constant purification; there's nothing else to be done. Eventually we will arrive at a point where our thought processes and feelings are not only kind and loving but also full of wisdom, bringing benefit to ourselves and others.

That is possibly a designation of a goal. In order to get to that goal, however, we need to know exactly where we stand; otherwise how can we start on this journey? Many people go around in circles in their spiritual practice either having exaggerated or underrated ideas of their own worth. Both are detrimental to a fundamental recognition of ourselves.

We need to enquire into any discomfort arising within. Imagine you are sitting on a pillow with one leg bent in such a way that the discomfort becomes greater and greater. Would you do something about it or would you just keep sitting like that for the rest of your life? Physical discomfort is something that all of us wish to escape or alleviate, and discard as quickly as possible. What about mental and emotional discomfort? What can be compared in importance to that and why do we feel uncomfortable so often? Nobody feels at ease in an untidy, messy household, or likewise when there are unwholesome aspects arising in our inner household such as resistances, dislikes, fears, feeling threatened, worries about our past or future. How can that be comfortable?

Only when we realize that we are the manufacturers of our own discomforts is there any opening for change. If we still believe that other people, situations or the lack of appreciation, praise, love or

opportunities, are at fault, we haven't started our practice yet.

We must arrive at a starting point. If one runs a race, one has to find the starting line. We have to find a point of departure for this practice which is found within our own inner being. Only those people who are determined to grow in spirituality will find that fundamental basis within, from which inner growth can be generated.

The whole person becomes involved and not just for the few hours of meditation or scattered moments of remembrance. The whole of each of us working the whole time at it can become purified.

There must be no lip-service; it has to be real. All discomfort within us, all unhappiness, fear or worry, have been created by ourselves. Only then is the field wide open for change. That moment of acceptance and realization changes our whole world because now we can do something about our lives. Until then we were helpless victims. We cannot change the world or other people; we can hardly even change the behavior of a dog, but we can change ourselves. As long as we only believe this, but don't do it, we haven't started to practice. We can even sit in meditation, but no results will show in our lives.

It starts with inner softness, acceptance and pliability. We become open to people and situations around us. If we retain our own ideas and viewpoints, continually liking or disliking the same areas of life, we are not sensitive to our inner reactions. Softness, acceptance and pliability may result in a great deal of pain, but that's part of practice. But because it's painful, it's often rejected. Surely that is the wrong way of dealing with ourselves. If we break a leg and don't want to have it set because that is painful, it would mean limping for the rest of our lives. This is equivalent to looking for a lifelong anesthetic which dulls all awareness and keeps us in a semi-awake state.

Because all of us have the six roots of greed, hate and delusion and their opposites of generosity, love and wisdom, we are constantly manifesting one of these. Love and hate, greed and generosity, are usually equally distributed in most people. Delusion, however, is the

underlying factor of all our mental emotional activities, and wisdom is rare. We are not actually hating anyone because he is hateful, but rather because our inner hate is looking for an outlet. This is one of the great absurdities of humanity, and only a very few people are aware of this simple fact which could change our whole life. When we hate, we don't do so because there's anything worth hating or disliking but only because hate wants to manifest itself.

The one who becomes unhappy in the first instance is the one who is hating. This negative emotion is like a barb which we would like to use to hurt others, but it first pricks the one who is holding on to it. This is a law of nature and so simple that most people overlook it completely. We go through life having a distinct demarcation line: on the right everything we like and on the left everything we dislike. Certain qualities and characteristics are always either good or bad in our opinion. Sometimes it does not work out quite that way and we hate to shift our demarcation line. It's not a comfortable way of living. One is a person who cannot be happy because it's impossible to find only people and things that one likes. Since there is no perfection in existence, there's no hope for happiness in such a mode of reacting. It is amazing that most people have not woken up to this fact. Many have spoken and written about it but it remains a matter of spiritual practice.

To recapitulate: first, we know that we are the doer. We are responsible for whatever is arising within us. Second, we can change because we realize that the dislikes, hates, fears and worries are creating unhappiness for ourselves.

Change necessitates substitution. Here we can appreciate the training in meditation, where we are constantly called upon to substitute our thinking with being attentive to the breath. For one who doesn't meditate the substitution of one thought for another is an unknown factor. To exchange an unwholesome thought with a wholesome thought is an almost unbelievable idea for people who do not know anything about spiritual practice. We are prone to believe what we are thinking. That nobody else is thinking the same has never occurred to us. To be the only one with such a thought amongst four billion inhabitants is an

absurdity rarely noticed.

The next important step in our maturing process is the recognition of our own //dukkha//. This seems so simple that one wonders why it is often difficult to follow through with it. If we have //dukkha// like everybody does, we are in the first instance inclined to blame someone or something. We can start with people, continue with situations, and include our sense contacts, what we hear, see, taste, touch and smell. The possibilities for blame are infinite. But when we indulge in them, we are refusing our first insight; namely, that we, ourselves, are responsible. If we hold fast to that understanding, then we begin to see //dukkha// in a different way. Namely, as part and parcel of being human; as a universal and not a personal truth. However, when we are disliking our painful feelings and are not willing to accept the fact that our own mind is the culprit, then we will look for a scapegoat. This is a very popular past-time and possible scapegoats are innumerable. When we remember that we're causing our own //dukkha// we are back to spiritual practice. As we dislike our own //dukkha//, hate arises at the same time which results in "double //dukkha//."

Using insight into self-made //dukkha// as our next step, we have a chance of changing the discomfort within ourselves from dislike and hate to, at least, acceptance. Eventually a feeling of being at ease with oneself arises, without which meditation cannot flourish.

These are fundamental aspects of ourselves which we need to investigate and experience. Spiritual practice involves one's whole being and the exploration of our reactions, developing sensitivity and vulnerability to others and being able to roll with the punches. We begin to realize that there are certain necessary learning situations in our lives and if we don't make use of them, we will get the same ones over and over again. If we look back for a moment, we may be able to see identical situations have arisen many times. They'll continue to do so many lifetimes, unless we change.

Spiritual practice is not just sitting on a pillow but more an opening of the mind to what is actually going on inside. If that opening is closed the moment we stand up, then we haven't really been meditating

successfully. It is not so much how long we can attend to the breath or the sensations but rather how aware and how awake we become. Then we can use that awareness in our everyday reactions and thinking processes. There is the Cartesian view: "I think, therefore I am." Actually it's the other way around: "I am, therefore I think." Unless we can get some kind of order into our thoughts and emotional reactions which follow the thinking process, our mind will constantly play havoc with our inner household.

The realization of where our //dukkha// comes from must be followed by the understanding that disliking it will not make it go away; only letting go of wanting makes //dukkha// disappear, which means unequivocal acceptance. Accepting oneself results in being able to accept others. The difficulty with other people is that they present a mirror in which we can see our own mistakes. How useful it is to have such a mirror. When we live with others we can see ourselves as if it were a mirror-image and eventually we learn to be together like milk with water, which completely blend. It is up to each one of us to blend; if we wait for others to do it we are not practicing. This is a difficult undertaking but also a very important one. Eventually we will create the inner comfort to expand our consciousness and awareness to an understanding of universality.

The world at large is very busy and we get caught up in extraneous matters. The world inside is also very busy but we can do something about that. We can quieten it down to see more clearly. The way of spiritual practice is nothing special, just our whole body and mind.

[AYYA KHEMA was ordained as a Buddhist nun in Sri Lanka in 1979. She established Wat Buddha Dhamma, a forest monastery near Sydney, Australia, and in 1989 established Buddha-Haus in Germany, where she was spiritual director. Towards the end of her life she experienced ill health but she continued to give talks, to write and to teach until just before her death. She passed away on November 2, 1997]

Book Name: Introduction to Pali

Date: Friday, August 25, 2006 - 09:41

Name: John Kelly

Chapter: Chapter 1 - Vocabulary

1. bhavati

is, becomes

2. upasaµkamati

goes to, approaches

3. pakkamati

goes away

4. cavati

falls, dies

5. j´vati

lives

6. passati

sees

7. pucchati

asks

8. bandhati

binds

9. bhŒsati

speaks

10. vadati

says

11. nis´dati

sits

12. harati

takes

13. Œharati

brings

14. hoti

is

15. upŒsako

lay disciple

16. kŒyo

body, substance

17. khattiyo

warrior, noble

18. gŒmo

village

19. athŒgato

thus-gone, the Buddha

20. devo

god

21. putto

son

22. puriso

man, person

23. brŒhmaöo

priest, brahmin

24. maggo

road, way

25. manusso

human being, person

26. amanusso

non-human being, god

27. mahŒmatto

minister

28. loko

world, people, universe

29. samaöo

ascetic, wanderer, philosopher

30. samayo

time, occasion
